

# Plotting and Analysis for Neural Database-Oriented Research Applications (PANDORA) Toolbox — User’s and Programmer’s Manual

Cengiz Günay

Document Revision , November 14, 2017

## Contents

<b>1</b>	<b>Introduction</b>	<b>18</b>
1.1	What is the PANDORA Toolbox? . . . . .	18
1.2	Why did you make it? . . . . .	19
1.3	How is it implemented? . . . . .	19
1.4	How can I use it? . . . . .	19
1.5	Who is it made for? . . . . .	19
1.6	Finding your way around . . . . .	20
1.7	Overview of this document . . . . .	20
<b>2</b>	<b>Installation</b>	<b>20</b>
<b>I</b>	<b>Software Architecture</b>	<b>21</b>
<b>3</b>	<b>Toolbox Components</b>	<b>21</b>
3.1	Databases hold all the information . . . . .	23
3.2	Datasets create the databases . . . . .	25
3.3	Bundling the database and dataset together . . . . .	27
3.4	Wrapper classes hold raw data . . . . .	28
3.5	Profiles hold results of measurements . . . . .	29
3.6	Integrated plotting for easy visualization . . . . .	30
3.7	Miscellaneous classes . . . . .	31
<b>4</b>	<b>Programming Conventions</b>	<b>31</b>
4.1	Using property structures for passing optional arguments to methods . . . . .	31
4.2	Overloaded operators for transparent access to object contents . . . . .	31
4.3	Troubleshooting errors . . . . .	32
4.4	Creating a new class . . . . .	33

<b>II</b>	<b>User's Manual</b>	<b>33</b>
<b>5</b>	<b>Recipes for Common Tasks</b>	<b>33</b>
5.1	Loading a database . . . . .	33
5.1.1	Creating a dataset for physiology data . . . . .	33
5.1.2	Creating a dataset for simulation data . . . . .	34
5.2	Finding constrained subsets in a database . . . . .	35
5.2.1	Complex Queries . . . . .	36
5.3	Sorting the database according to a measure . . . . .	36
5.4	Preprocessing a raw (physiology) database . . . . .	38
5.4.1	Limiting range of bias currents . . . . .	38
5.4.2	Choosing few current levels . . . . .	38
5.4.3	Adding new columns calculated from existing measures . . . . .	39
5.4.4	Averaging multiple traces of same neuron . . . . .	39
5.5	Making a database by merging multiple rows from another database . . . . .	41
5.5.1	Making a one-row-per-neuron DB from multiple CIP-level rows . . . . .	41
5.5.2	Making a one-row-per-neuron DB from dual CIP-level rows . . . . .	42
<b>6</b>	<b>Visualization</b>	<b>45</b>
6.1	Visualizing traces . . . . .	46
6.2	Displaying database contents . . . . .	46
6.3	Plotting all measure histograms . . . . .	47
6.4	Plotting all parameter histograms . . . . .	48
6.5	Plotting database statistics . . . . .	48
6.6	Plotting parameter-measure variations . . . . .	51
6.7	Insets . . . . .	51
6.8	Generating a report comparing two databases . . . . .	52
	<b>References</b>	<b>52</b>
<b>A</b>	<b>Function Reference</b>	<b>53</b>
A.1	Class <code>chans_db</code> . . . . .	53
A.1.1	Constructor <code>chans_db</code> . . . . .	53
A.1.2	Method <code>display</code> . . . . .	53

## 1 Introduction

### 1.1 What is the PANDORA Toolbox?

The PANDORA Toolbox is a software package which consists of a collection of MATLAB object-oriented classes and script functions for creating, analyzing and visualizing

databases based on data from electrophysiological neuron simulations and recordings.

### 1.2 Why did you make it?

Motivations to create this software were:

- Analyze data generated by brute-force and other parameter search methods.
- Analyze subsets of parameter spaces and special cases.
- Evaluate robustness of model neurons.
- Find functional roles of specific conductances.

### 1.3 How is it implemented?

A custom database management system (DBMS) is written from scratch in the MATLAB language. The toolbox design follows object-oriented programming principles. It uses functions from the statistics and signal processing toolboxes of MATLAB, but they are not strictly necessary. It does not use MATLAB's database (DB) toolbox.<sup>1</sup>

### 1.4 How can I use it?

The PANDORA Toolbox uses an object-oriented approach to provide maximal flexibility for interactive use on the MATLAB command-line.<sup>2</sup> Objects can be created, modified, analyzed, and visualized interactively in few steps. It is straightforward to save and load binary representations of these objects into files. Scripts can be made to programmatically repeat these procedures. Existing object classes are designed with the prospect of future extension, to accommodate new types of data and analyses.

### 1.5 Who is it made for?

PANDORA Toolbox is customized for neuroscientific research. However, the concepts of a complex dataset, extraction of multiple observations from each item of the dataset, and analysis of multi-dimensional parameter spaces are universal. In its current form the database and dataset classes can be used for data other than electrophysiologic sources. As this toolbox is designed for flexible extensibility, one can add extensions that deal with different types of data and analyses.

---

<sup>1</sup>At the time of initial design, the author did not have access to the DB toolbox. Future versions may support the DB toolbox.

<sup>2</sup>This version of the toolbox does not yet have a general graphical user interface (GUI). The author prefers to have a flexible command-line interface than to maintain a limited GUI. However, once commonly used functions can be conveniently placed within a GUI, it will be added to the toolbox.

### 1.6 Finding your way around

The source code uses MATLAB's documentation system, therefore all methods and classes are documented. To get help about all classes, issue the

```
>> help djlabs
```

at the MATLAB prompt. This should give you an overview of available classes. Then, to learn about a specific class, ask for the documentation for the constructor method. For instance, for the `trace` class, issuing

```
>> help trace
```

gives you the documentation for the constructor together with an overview for the class. Sometimes, if there are multiple methods with the same name under different classes, you may get the wrong documentation. In that case, you can specify the class from which to take the method by prepending the class name to the method, such as in

```
>> help trace/spikes
```

In order to learn all methods available for a class, you can use MATLAB's `methods` command. For the `trace` class, do

```
>> methods(trace)
```

However, some documentation may be outdated or simply wrong. Please report these to the author via e-mail to `cgunay AT emory.edu`.

### 1.7 Overview of this document

Next, Section 2 guides the reader through the installation of the package and other dependencies. You can skip this section if you already have a running software environment. Section 3 introduces the essential components of the software and talks about their design decisions. You can also skip this part if you're not interested in the guts of the system and you are in favor of a quick start. The recipes in Section 5 provide a tutorial for some common tasks. It may be easier for some readers to follow these recipes to jump-start using the software. However, it is recommended that you familiarize yourself with the basic organization of the classes before proceeding into more complex tasks. Section 6 takes the tutorial approach to describe common visualization tasks. Finally, Section A points to the list of individual methods provided by the software. These methods are documented in detail using the MATLAB online help system.

## 2 Installation

Download the latest package file from:

<http://userwww.service.emory.edu/~cgunay/pandora>.

Unpack the archive anywhere in your system, using

```
$ tar xzf pandora-xyz.tar.gz
```

and follow the instructions in the README file.

Basically it involves pointing your MATLAB installation to look at the `pandora/` subdirectory for loading the PANDORA files. This can be achieved by adding this directory to your MATLAB search path using the `addpath` Matlab command. To avoid its repeated application for each new session, you can have a startup script, `startup.m`, in the directory that you run MATLAB with the following commands:

```
%--- startup.m for matlab
addpath /my/download/directory/pandora-1.0b/pandora
%--- end startup.m
```

This will be loaded everytime you run MATLAB from this directory. in UN\*X systems, this can be improved further by placing the command in the file `$HOME/matlab/startup.m`, which is executed no matter from where MATLAB is called, especially if you are running Matlab from different or unknown places each time. In Windows, place the file under `My Documents/MATLAB`, or add the directory to the search path using the *File->Set Path* menu option.

## Part I

# Software Architecture

## 3 Toolbox Components

An overview of the toolbox functionality is shown in Figure 1. In the figure, boxes represent objects that can be created with the toolbox. Flow starts from the dataset object on the top left which represents the collection of raw data files. The raw data is loaded using information in the dataset to create intermediate objects that, for instance, contain data traces. These objects define electrophysiological measurements to be entered into the data matrix of the database object on the top right. The database object allows filtering and querying to refine its contents. From the database object, one can always go back to the dataset and find the raw data that results from a query. The arrows going to bottom objects and corresponding plots show the types of possible analyses that can be done on a database object. These analyses are typically for displaying statistical information. The red arrow is a speacial analysis for searching and matching rows between different databases. The match is done by taking a row from a database created with data from real neurons and finding best matching model neurons from a simulation database.

The objects in the figure are instances of classes that define their properties in the object-oriented framework. Each class comes with a hierarchy of of subclasses that specialize to specific functions. Subsequent sections describe each of these class hierarchies that make up the main components of the toolbox.

### 3.1 Databases hold all the information

The database object is at the center of this toolbox (see Figure 1). It holds a data matrix with rows as observations and columns as attributes. The rows would normally correspond to results from individual data traces, or simply neurons. The columns hold values of separate measurements, statistical data, or parameter values.

A database object can be created from any of the classes in the hierarchy of Figure 2. The top-level database class is `tests_db` which contains a two-dimensional data matrix of real numbers and some metadata. The metadata consists of column labels (e.g., measure names), a dataset label, and data properties (e.g., time resolution). The subclasses are specialized for different tasks.

If the database object is created using a dataset object, this maintains a connection from the elements of the database (e.g., neurons) to the raw data. This allows raw data associated with database contents to be visualized during analysis. However, a database can be created from any data matrix given in the proper format.

Some specialized subclasses of `tests_db` are as follows:

`params_tests_db` The first `num_params` columns are reserved for parameters that were changed between different rows. It contains methods that treat these columns specially. Parameters can be simulation parameters, or pharmacological applications to experiments.

`tests_3D_db` Contains a three-dimensional data matrix that has additional dimension for pages of information. This is mainly used to look at change in measurements with a parameter using the `invarParam` method of `params_tests_db`. Three dimensional databases can be useful for other purposes as well.

`stats_db` Contains few rows that describe the statistics obtained possibly from another database. It can contain the mean and standard deviation or error, or in some cases, the minimal and maximal values of columns in a database. It contains special plotting functions. There are methods that use the statistics collected by this class.

`ranked_db` Contains distances that resulted from a comparison of a database with a criterion. Its rows are ranked and sorted according to this distance value. Each row would point to a row in `dex` into the original database. Contains methods to generate reports from information about matching neurons.

`spikes_db` Contains results from individual spike shapes of a `trace` object. It can be obtained using the `trace/analyzeSpikesInPeriod` method.

`histogram_db` Each row corresponds to a histogram bin. Contains plotting methods.

`corrcoefs_db` Each row corresponds to a correlation coefficient. Contains plotting methods.

`cluster_db` Each row corresponds to a cluster centroid. Contains plotting methods.

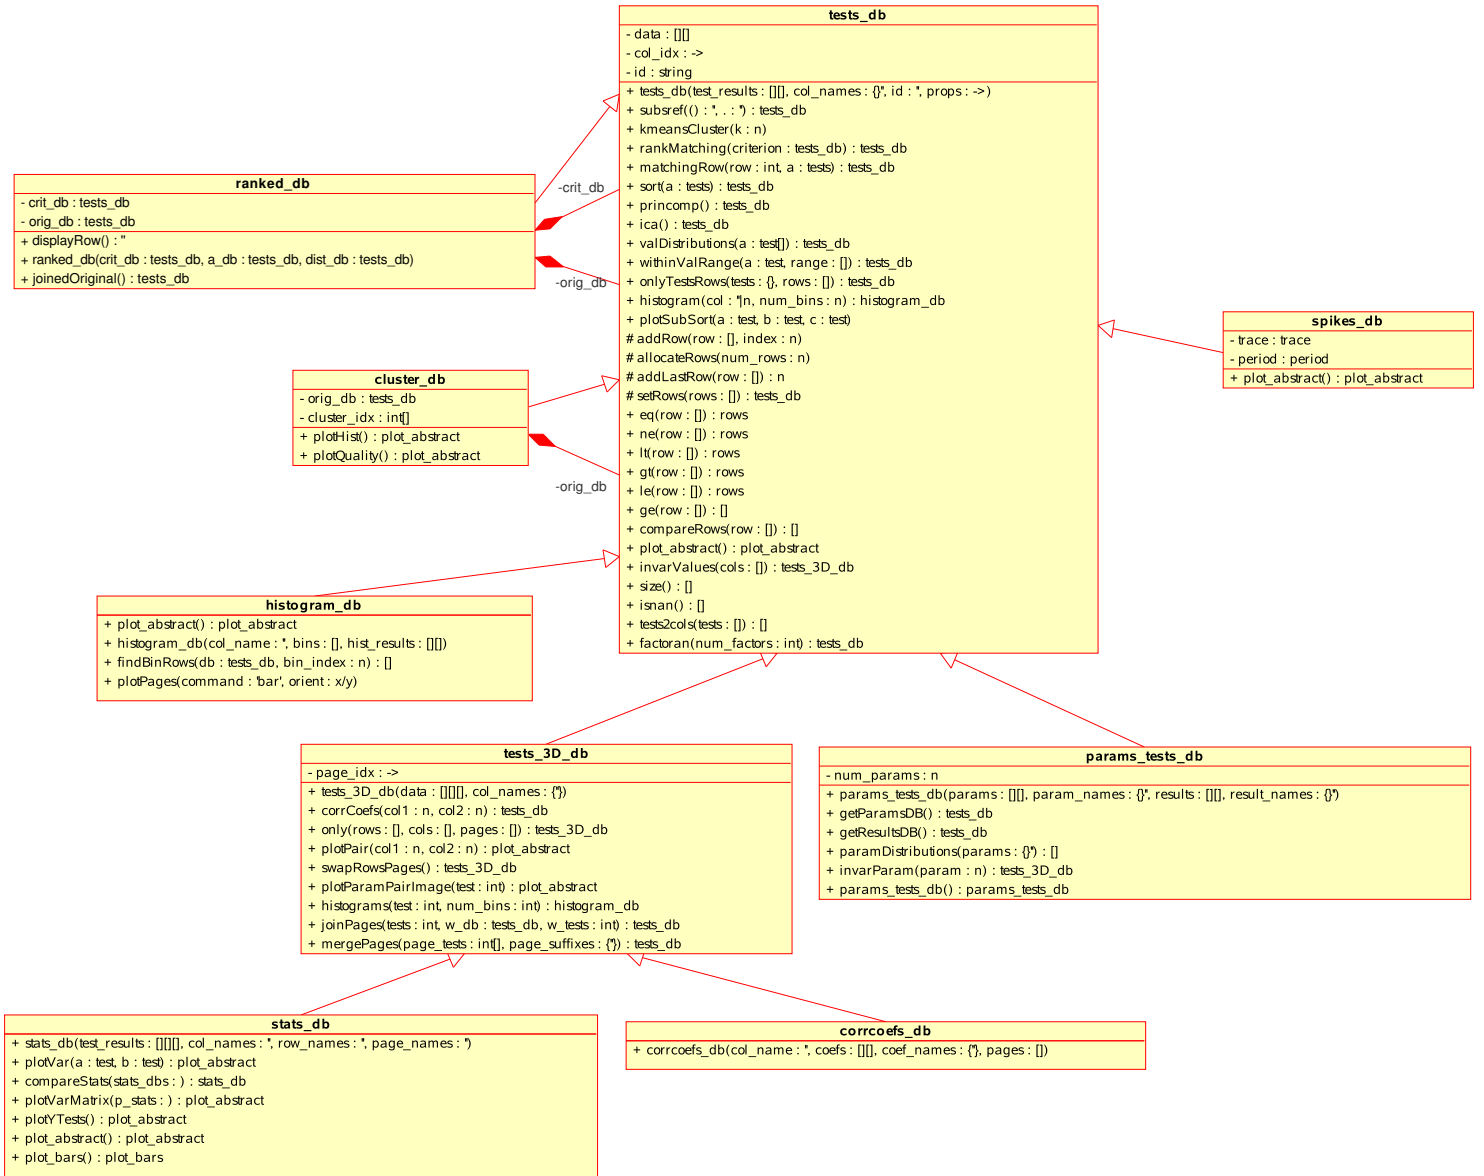

Figure 2: Database class hierarchy.

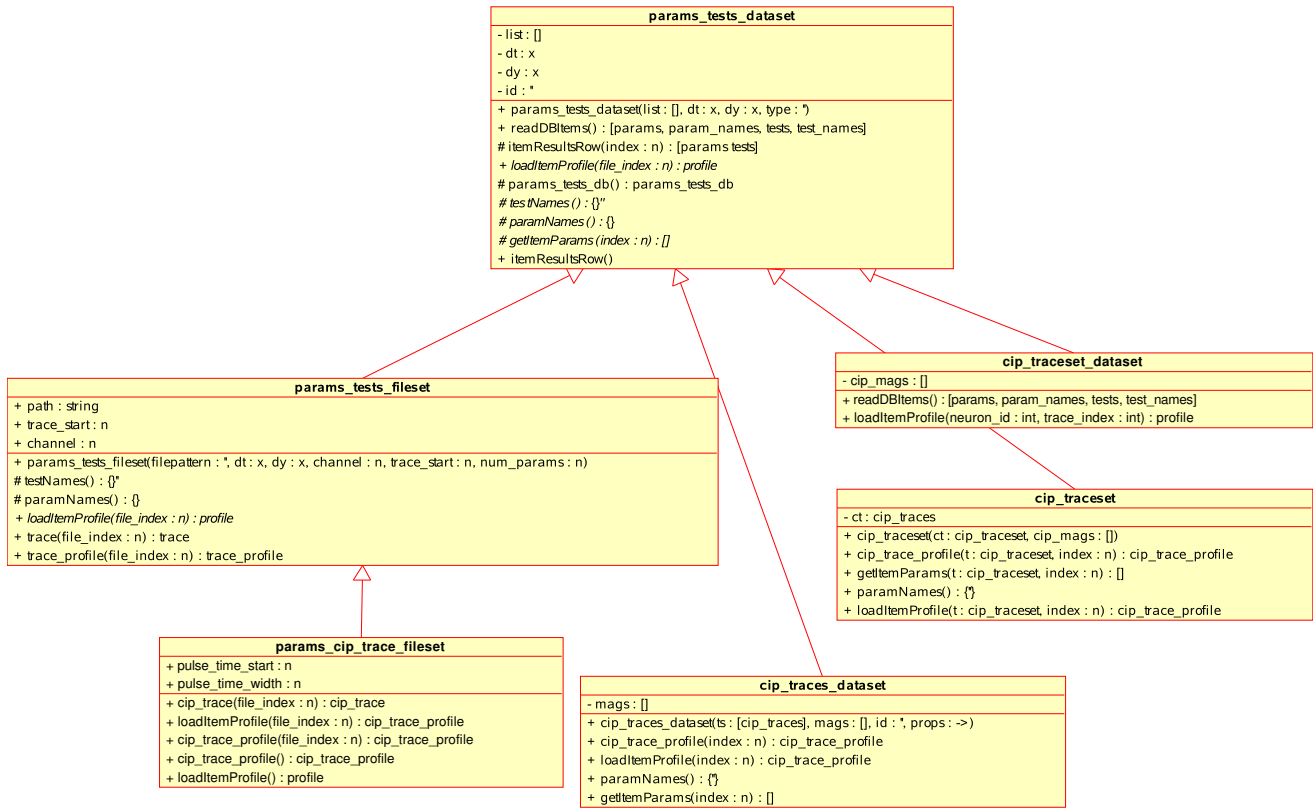

Figure 3: Dataset class hierarchy.

### 3.2 Datasets create the databases

The dataset object is responsible for creating the database objects (see Figure 1). It defines where the raw data is stored and what parameters are used to load and analyze it. It knows that raw data has parameters associated which individual raw data traces and how and which measures will be generated. This information is used to automatically generate a database from the dataset. It also allows reaching back the raw data from rows of an analyzed database.

Figure 3 shows the hierarchy for the dataset classes. The top-level dataset class is `params_tests_dataset` which is an incomplete class. That is, this class defines general utilities that can work for a variety of dataset subclasses, but one cannot make a object from the `params_tests_dataset` class directly. Instead, one of its subclasses must be chosen and used. Some of these specialized subclasses are as follows:

**`params_tests_fileset`** This class assumes each raw data item resides in a file and all of these files are in the same directory. The parameter names and values are obtained from each file name itself. This class is mostly useful for simulation filesets.

`params_cip_trace_fileset` This is a subclass of `params_tests_fileset`, therefore it inherits the notion of one file per data item. The files must conform to the current-pulse injection experiments and have a starting time and duration for the pulses. The pulse magnitude is read from the `pAcip` parameter. This class is mostly useful for simulation filesets.

`physiol_cip_traceset` This is a subclass of `params_tests_dataset`. It is designed to load a set of physiology traces from a single file generated by the PCDX stimulation and acquisition software.

`physiol_cip_traceset_fileset` This is a subclass of `params_tests_dataset`. It is designed to load traces from multiple PCDX data files. It uses the `physiol_cip_traceset` class for this purpose.

`cip_traces_dataset`, `cip_traceset`, `cip_traceset_dataset` These are obsolete classes that allow loading physiology traces from older MATLAB formatted objects.

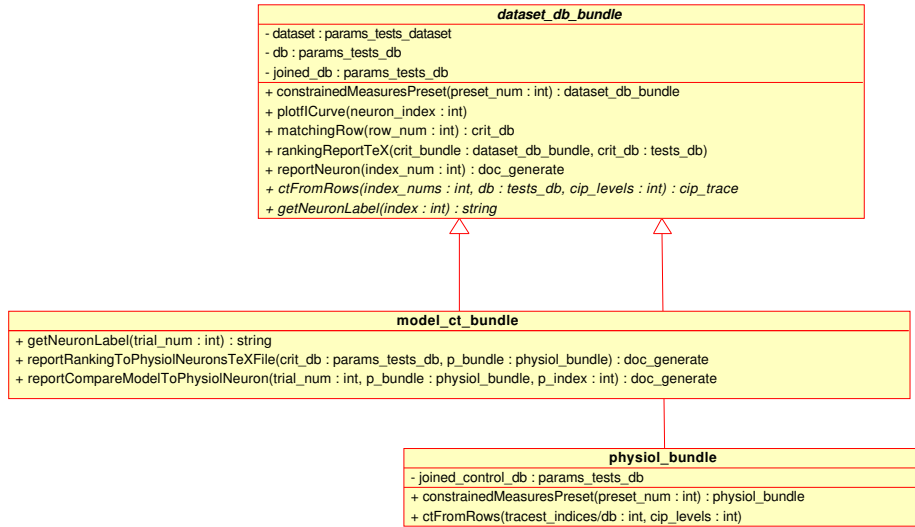

Figure 4: Bundle class hierarchy.

### 3.3 Bundling the database and dataset together

Since dataset and database objects are related and work together for some operations, it is convenient to have another object that bundles them together. There are several analysis routines that start from the database, retrieve raw data traces and other related information from the dataset and create a result. For instance, matching neurons from one database to another requires first comparing the measurements to find match candidates, and then comparing raw traces to visually represent the match quality.

The top-level `dataset_db_bundle` class in Figure 4 fulfills this purpose by bundling a dataset with the raw database, `db`, created from it, and with the reduced database, `joined_db`, that contains a one-row-per-neuron representation. Although being a virtual class that cannot be instantiated, it contains general methods and prototype methods that must be implemented in subclasses. This way, it provides guidelines for defining subclasses. Its two subclasses provide specialize methods for model and physiology databases, respectively.

**model\_ct\_bundle** Contains methods to name and visualize neurons in the model database. It has methods to compare real neurons to model neurons to find best matching candidates.

**physiol\_bundle** Contains methods to name and visualize neurons in the physiology database. It contains a new attribute, `joined_control_db`, that holds only the neurons recorded without any pharmacological treatments.

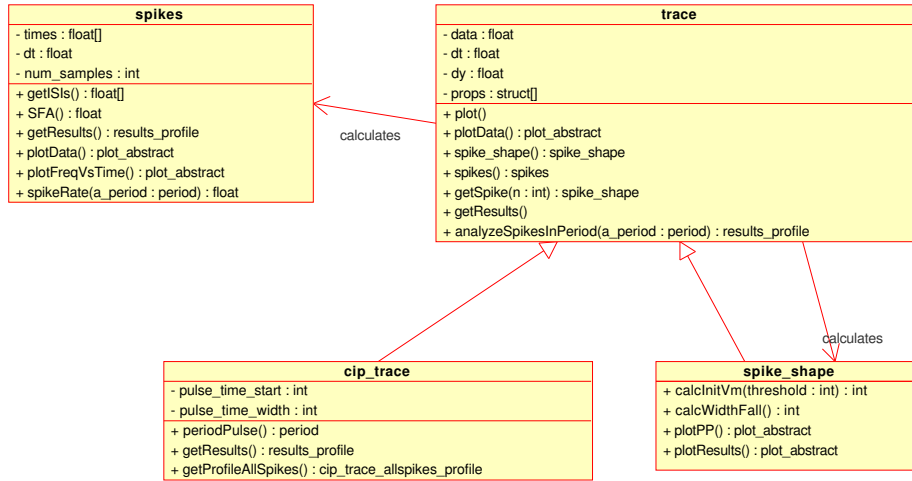

Figure 5: Data wrapper class hierarchy.

### 3.4 Wrapper classes hold raw data

Wrapper classes are designed to hold data and provide simple methods that operate on them. They can either hold raw data, or intermediate processed forms of data being byproducts of analysis routines. In the overall schema of Figure 1, the raw traces obtained from the dataset object are kept in data wrapper objects.

Figure 5 shows the hierarchy for the data wrapper classes. The most basic data wrapper class in this toolbox is the `trace` class, which holds raw voltage or current traces. The `spikes` object contains the spike times obtained by analyzing a `trace` object.

A data wrapper class does more than just holding the data. It defines a set of operations in terms of method functions that can work on the data held by the class. As a rule of thumb, if one needs to add some new functionality into the toolbox, it should be added as a method into a class holding the data on which to operate.

Some of the data wrapper classes are as follows:

**trace** Generic object that holds a vector of data that changes over time. It has a time resolution and y-axis resolution. Contains simple analysis routines such as finding average values within different periods, or finding spikes given a threshold.

**cip\_trace** A subclass of `trace` class for current-injection recording protocols. It defines an initial spontaneous period, followed by a current-injection period, and final recovery period. It contains period-specific analyses that apply to the experimental protocol.

**spike\_shape** A subclass of `trace` that holds the shape of a single spike. It contains spike shape measurements.

**spikes** A generic class to hold the event times for spikes. It contains methods for making measurements based on spike times, such as rate and ISI calculations.

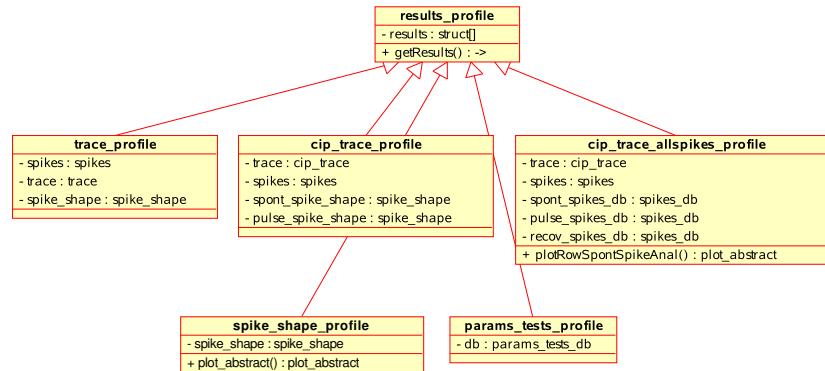

Figure 6: Profile class hierarchy.

### 3.5 Profiles hold results of measurements

Profile classes are designed to hold results of analysis and measurements on the data wrapper or database objects. The data and results are separated into different classes for added flexibility of saving data and results separately. Yet, the profiles normally keep a copy of the data wrapper object from which they obtained the measurements. The intention is to save the measurement results for possible visualization or later inspection, without having to repeat the analyses.

In Figure 6, the top-level `results_profile` class contains a simple MATLAB structure variable, `results`, that holds a set of name-value pairs. These are names of measurements and their corresponding values. Most of the subclasses are simplistic, and they exist only for organizational reasons. Some of them may implement specialized plotting methods that make use of the saved measurements. These subclasses can be briefly described as follows:

**trace\_profile** Holds measurements from a `trace` object. It contains the `trace` object and the spikes found in it, and averaged `spike_shape` object.

**cip\_trace\_profile** Holds measurements from a `cip_trace` object with a current-injection period. It contains the original `cip_trace` object and the spikes found in it. In addition, it holds averaged `spike_shape` objects from the spontaneous and current-injection periods.

**cip\_trace\_allspikes\_profile** Extended version of `cip_trace_profile`. Instead of single averaged spike shapes, it contains spike databases from the spontaneous, current-injection and recovery periods. These databases only retain measurements made from individual spikes, but not their shapes.

**spike\_shape\_profile** Holds measurements made from a `spike_shape` object.

**params\_tests\_profile** Holds analysis results from a `params_tests_db` object.

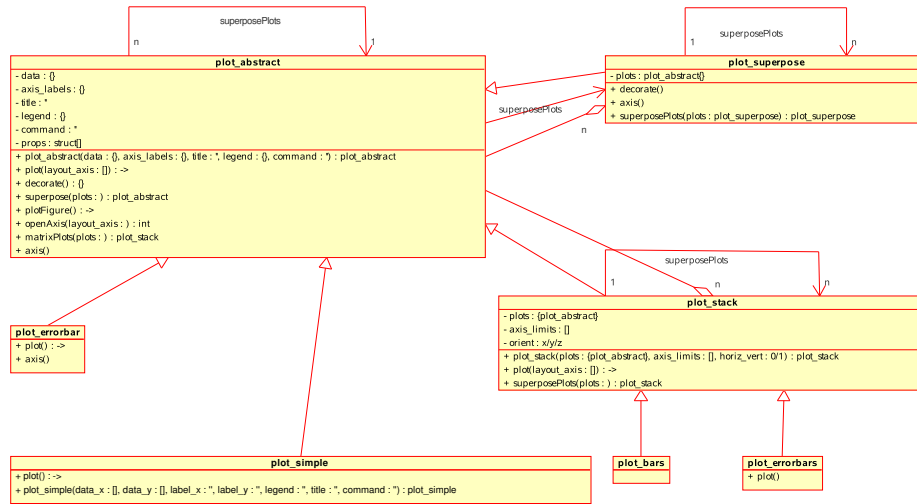

Figure 7: Plot classes hierarchy.

### 3.6 Integrated plotting for easy visualization

To integrate visualization into each class, common MATLAB plotting features are implemented in the supporting classes seen in Figure 7. These bring an object-oriented approach to plot generation in MATLAB. Plots can be generated as objects, saved, modified and included as subplots in larger plots.

The main plotting classes are `plot_abstract`, `plot_superpose`, and `plot_stack`. The most general plotting template class, and the top-level class in the hierarchy, is `plot_abstract`, which plots an axis using a single MATLAB command, like `plot` or `bar`. Multiple `plot_abstract` objects that use the same command can be superposed and still act as a single `plot_abstract` object. If they require different plotting commands (e.g., mixing `plot` and `text` labels), a `plot_superpose` object must be used that is composed of an array of `plot_abstract` objects. Multiple `plot_abstract` objects or any of the subclass objects can be composed together in a horizontal or vertical stack using the `plot_stack` class. Since `plot_stack` is itself a subclass of `plot_abstract`, it can be stacked as well. This allows creating virtually any complex structured figure using the three classes. Each of these classes have several properties that control the layout and details of placement and looks.

The rest of the classes in the hierarchy create typical types of plots for convenience:

`plot.bars` Multi-axis bar plot with extending errorbars using a combination of the `bar`, `errorbar`, and `text` commands.

`plot.errorbar` Single-axis errorbar plot using the `errorbar` command.

`plot.errorbars` Multi-axis errorbar plot using the `errorbar` command.

`plot.simple` Simplified single-axis, single command plot.

### 3.7 Miscellaneous classes

These are miscellaneous classes that do not fit into any of the above categories:

`period` Defines a period composed of a start and end time for operations on traces, etc.

`script_array` Defines a looping construct that can be extended. It defines an initialization routine, a job that needs to be repeated, and a finalization routine.

`script_array_for_cluster` Subclass of `script_array`, it can submit the array job to run in parallel on a computing cluster that supports the Sun Grid Engine (SGE) commands.

`script_factory` Factory class to generate an enumerated array of script files to be distributed on several machines and run in parallel. It also defines a final function to gather results. It is recommended to use `script_array_for_cluster` instead.

## 4 Programming Conventions

### 4.1 Using property structures for passing optional arguments to methods

For flexibility in passing optional arguments to methods, this toolbox adopted using property structures. A MATLAB structure, mostly called `props`, is passed to a method as the last argument:

```
>> props.optionalParam = 1
>> myFunc('hello', props)
```

Each method defines a list of accepted arguments that can be defined as fields in the structure, but should be able to execute without them by substituting defaults. Using a property structure is advantageous over using the `varargin` keyword for variable number of arguments, because properties allow adding and deleting arguments in methods without causing changes to the contents of the method. Since arguments are addressed by names rather than positional arguments, missing arguments do not affect the other arguments.

Most objects keep a property structure that define custom attributes passed at time of construction. These classes define a `setProp` method to modify properties after being created.

### 4.2 Overloaded operators for transparent access to object contents

The simplistic implementation of object-oriented programming features in Matlab impose several strict limitations. MATLAB's powerful and flexible operator overloading feature helps overcome these limitations.

PANDORA Toolbox uses MATLAB operator overloading to facilitate manipulation of local and parent object fields. In MATLAB, object fields can only be

accessed from the object's private methods. This means one cannot access the object fields using the dot operator. To give an example, the `trace` object has a `dt` field for time resolution. The following command fails:

```
>> mytrace.dt = 1e-4;
??? Object fields can only be accessed within methods.
```

Everytime object contents need to be addressed, a method must be called. The recommended way to do this is by defining separate getter/setter methods for each field of the object. For instance, writing `getDt` and `setDt` methods for accessing the `dt` field. This creates a lot of burden for the programmer not just creating a class, but also maintaining it later. Although this probably was intended for strictness in building object-oriented constructs, it is highly inconvenient for command-line manipulations. Therefore our toolbox objects offer generic `get` and `set` methods that can read or write the value of any of its fields:

```
>> mytrace = set(mytrace, 'dt', 1e-4)
>> get(mytrace, 'dt')
ans = 1e-04
```

These methods are almost identical across different classes. In addition to this, defining the special `subsref` method for objects allow overloading the dot (`.`), parenthesis (`()`), and curly brace (`{}`) operators. Most<sup>3</sup> of the objects in the toolbox allows using the dot operator to read or write to fields. Overloading these operators also help with the limitation of accessing parent object fields, a problem not found in other object-oriented languages such as JAVA. For example without any overloading, from the subclass class `cip_trace` one needs to first address the parent class name, and then `dt`:

```
>> myciptrace.trace.dt
ans = 1e-4
```

After defining the overloaded operator that call parent methods, one get reach `dt` directly:

```
>> myciptrace.dt
ans = 1e-4
```

Some classes overload indexing operators to allow accessing special functions. For instance the main database class, `tests_db`, overloads parenthesized indexing to access cells in the database matrix. Some classes define the special `subsasgn` method to overload the assignment operations when the object is on the left-hand-side of the operation. This allows the command:

```
>> mytrace.dt = 1e-4;
which would otherwise need to be done the following way:
>> mytrace = set(mytrace, 'dt', 1e-4);
```

### 4.3 Troubleshooting errors

For debugging problems with methods, one can turn on the verbosity of information display during execution with:

```
>> warning on verbose
>> warning on backtrace
```

---

<sup>3</sup>May not be implemented for all objects.

## 4.4 Creating a new class

To get the benefit of overloading, the top-level class must have the generic `subsref` and `subsasgn` methods. These methods can be copied from any of the other top-level classes. Any subclasses should have the generic `get` and `set` methods in place.

# Part II

## User's Manual

## 5 Recipes for Common Tasks

### 5.1 Loading a database

A database can be created directly from a data matrix, or indirectly by loading a dataset. For the latter, first a dataset object must be created that point to the data sources. There are different dataset classes that allow using different data sources. For instance, physiology and simulation data require different operations. In physiology data, one can record information about the treatments and other conditions, whereas in simulations one can keep track of changing parameters.

Once the dataset object is obtained, the database object can be created with

```
>> mydb = params_tests_db(dataset)
```

which initiates the loading of files. This operation is the same no matter what type of dataset or fileset object is used. The following commands reduce the verbosity of output during this long process:

```
>> warning off verbose
>> warning off backtrace
>> warning off calcInitVm:info
```

#### 5.1.1 Creating a dataset for physiology data

Physiology data can be obtained from multiple sources.

**Loading data by specifying tracesets in a text file** The preferred way to load physiology traces is to first create a text file where each line specifies traces to load from a single data source (e.g., a PCDX file). The format of this text file is explained in the help of the `physiol_cip_traceset_filesset` class. The physiology fileset can be created from the text file with a command such as follows:

```
>> phys_filesset =
    physiol_cip_traceset_filesset('cell_traces.txt', 1e-4, 1e-3,
                                struct('profile_method_name',
                                       'getProfileAllSpikes',
                                       'offset_y', -9,
                                       'cip_list',
                                       [-200 -100:20:100 200 300]))
```

This command reads the `cell_traces.txt` file and records the tracesets to read from each file. The structure passed indicates to use the `getProfileAllSpikes` method to calculate the measurements on the traces.

The fileset can then be used to generate the database, as shown above, using its `params_tests_db` method. The fileset object holds within, a separate `physiol_cip_traceset` object for each line in the text file.

The `cip_list` optional parameter must be used with caution. To determine actual CIP-levels, the current channel of the trace is analyzed. `cip_list` entries are used to discretize the noisy current channel. Current levels will coerce to the nearest entry from `cip_list`. In the above example, all current levels below  $-200$  pA will be assumed to be  $-200$  pA. The default `cip_list` resides in the `physiol_cip_traceset/CIPform` method.

**Loading data from existing `cip_traces` objects** The now obsolete `cip_traces` Matlab objects have been used to hold some earlier physiological data. Each object holds a set of traces with varying CIP levels applied to the cell. The following command creates a dataset object from a cell array `ct_list` of `cip_traces` objects by choosing only the traces with 100 pA and  $-100$  pA CIP levels

```
>> phys_dataset =  
    cip_traceset_dataset(ct_list, [100, -100], 1e-3,  
                        'dataset gpd 0411-21',  
                        struct('offsetPotential', -9))
```

### 5.1.2 Creating a dataset for simulation data

First a dataset or a fileset must be created. An example to load GENESIS .bin files would be

```
>> fileset =  
    params_cip_trace_fileset('/home/cengiz/data/*.bin',  
                            1e-4, 1e-3,  
                            20001, 10000,  
                            'sim dataset gpsec0501',  
                            struct('trace_time_start', 10001,  
                                    'type', 'sim',  
                                    'scale_y', 1e3))
```

The explanation of arguments can be obtained by issuing a

```
>> help params_cip_trace_fileset
```

in MATLAB. In this example, all GENESIS files were created with the same characteristics:  $dt = 10^{-4}$ ,  $dV = 10^{-3}$ , pulse during samples [20001, 30000]. Optional properties (the last argument) indicates that the first 10000 samples should be discarded and that the data should be prescaled to yield the  $dV$  indicated. Note that, using an absolute path to refer to data files ensures that they can be reached from different directories after the fileset object is saved.

**Loading heterogeneous set of simulation files** Sometimes not all data files in a simulation set would have the same length, or CIP start time. The brute-force simulation set is such an example, where the spontaneous trace and different CIP level traces are in different files. I have a special superclass that contains multiple fileset objects to automatically handle this kind of data. It resides not in the general distribution directory, but in my personal directory /djlab/shared/matlab/classes/cengiz. This class is an example of how to create composite fileset objects. An instance of this class can be created with:

```
>> m_filesetall =  
    multi_fileset_gpsim_cns2005('.../data', '.../paramRanges.txt',  
                                '.../all_0.par', 'sim db gpsec0502')
```

which will find all the files in the given directory and put them in separate pre-defined fileset objects according to their `_pAcip_` suffixes. Parameter range definition and value files are used to read parameter values for each simulation. A single database object can be loaded using the `params_tests_db` method on the `m_filesetall` object above. The help on this method explains how to load only certain filesets at a time. This helps to load different filesets in parallel, since databases can be concatenated easily afterwards.

## 5.2 Finding constrained subsets in a database

Once a database with more-than-sufficient number of measures is available, subsets of this database can be extracted easily for other tasks. New databases can be formed by filtering rows, columns or pages of an existing database. For choosing any of these dimensions, the user can specify an array of indices, or a logical array. For instance,

```
>> db2 = db1(1:10, :);
```

creates a database object `db2` by the first ten rows of `db1` and all its columns. For three-dimensional databases, a third parameter can be specified, as in

```
>> db2 = db1(1:10, :, [1 3]);
```

which will take only the first and third page from `db1`.

For measures, columns can also be specified as a single string value, or a cell array of strings, as in

```
>> db2 = db1(1:10, 'pAcip');
```

which chooses only the `pAcip` column of the first 10 rows of `db1` or

```
>> db2 = db1(1:10, {'pAcip', 'IniSpontSpikeRate'});
```

which chooses two columns. Finally, composite queries can be formed when cell arrays are used for addressing:

```
>> db2 = db1(1:10, {1:10, 'IniSpontSpikeRate', 234});
```

which will select the first ten measures, the spontaneous spike rate, and the measure number 234.

Rows of the database signify neurons or simulation runs. Therefore it is important to find subset of neurons that match a certain criteria. This can be done specifying a list of rows that is the result of a logical operation. A logical operation finds rows that satisfy constraints on a single parameter or measure of a database. For instance,

```
>> rows = db1(:, 'IniSpontSpikeRate') > 10;
```

gives a logical array that contains a true value for all rows in db1 that has spontaneous firing faster than 10 Hz. If this is used as the row specifier in a subset operation, a new database with only these neurons can be obtained by

```
>> db2 = db1(rows, :);
```

If we want more constraints it is straightforward to use any logical operation such as AND (&), OR (|) and NOT (~) on these logical arrays such as

```
>> db2 = db1((rows | rows2) & rows3, :);
```

which says choose all rows from db1 where either the tests rows and rows2 are satisfied and while rows3 is always satisfied. All these operations can be specified in-place such as in

```
>> db2 = db1(db1(:, 'IniSpontSpikeRate') > 10 &
    db1(:, 'IniSpontSpikeRate') <= 20, :);
```

which will create a database of neurons that spontaneously fire between 10–20 Hz.

### 5.2.1 Complex Queries

Complex queries can be constructed using results of queries in nested fashion. The following example shows an example of finding all neurons that match any of the neurons in another database and then find the ones that match certain criteria:

```
>> sub_phys_es2 = phys_joined_db(phys_joined_db(:, 'NeuronId') == es2(:, 'NeuronId'), :);
>> displayRows(sub_phys_es2(sub_phys_es2(:, 'Apamin') > 0, 'NeuronId'))
```

Here, the first query returns all rows that match the NeuronIds from the es3 database. The inner term in the second query finds among these neurons the ones for which apamin blocker data is present. The final enclosing block uses these rows to get a subset of the phys\_joined\_db with only the NeuronId column. This type query has equivalent computational power to using nested SELECT statements in the SQL language.

### 5.3 Sorting the database according to a measure

First, all rows where the desired measure value is NaN should be eliminated:

```
>> ampDecayTau_nonNaN_db =
    dball(~isnan(dball(:, 'PulseSpikeAmpDecayTau')), :)
```

This finds all rows in dball that the PulseSpikeAmpDecayTau measure is not NaN and creates a new DB object ampDecayTau\_nonNaN\_db, which includes these rows with all measures from dball. Notice that the newly created DB contains less rows than the original DB. The number of rows in the new DB can be obtained by just typing the name of the DB and pressing enter at the MATLAB prompt.

Then, one can sort the new database using:

```
>> ampDecayTau_sorted_db = sortrows(ampDecayTau_nonNaN_db,
    'PulseSpikeAmpDecayTau')
```

This will create DB which is sorted with increasing values of the PulseSpikeAmpDecayTau measure. Displaying the first few rows gives lowest values:

```
>> displayRows(ampDecayTau_sorted.db, 1:3)
ans =
'NaF'          [    1000]    [    250]    [    250]
'NaP'          [   0.5000]    [  0.5000]    [  2.5000]
'Kv3'          [     60]    [    15]    [    30]
'Kv2'          [     9]    [     3]    [     3]
'Kv4f'         [     5]    [     1]    [    25]
'KCNQ'         [   0.1000]    [  0.0100]    [   0.1000]
'SK'           [   8.5000]    [    34]    [   8.5000]
'CaHVA'        [    10]    [  0.1000]    [    10]
'HCN'          [    30]    [  0.3000]    [    30]
'pAcip'        [   100]    [   100]    [   100]
'IniSpontISICV' [3.9448e-04]    [  0.0051]    [  0.0452]
'IniSpontPotAvg' [ -64.9161]    [-52.6859]    [-41.5876]
'IniSpontSpikeRate' [ 14.0014]    [ 18.0018]    [ 81.0081]
'PulseISICV'   [   0.0226]    [     0]    [   0.0366]
'PulseIni100msISICV' [ 0.0541]    [     0]    [   0.0814]
    [1x27 char] [ 28.8953]    [     0]    [ 88.9086]
    [1x27 char] [ 26.6785]    [     0]    [ 86.7052]
    [1x22 char] [    30]    [    20]    [   100]
    [1x25 char] [ 29.4118]    [166.6667]    [ 96.0512]
'PulsePotAvg'   [ -61.0044]    [-32.7775]    [-34.1518]
'PulsePotMin'   [    NaN]    [    NaN]    [    NaN]
'PulsePotSag'   [    NaN]    [    NaN]    [    NaN]
'PulseSFA'      [   1.1254]    [    NaN]    [   1.3571]
'PulseSpikeAmpDecayDelta' [ 4.2764]    [  9.2041]    [ 17.8389]
'PulseSpikeAmpDecayTau' [ 0.2000]    [ 0.2000]    [ 0.3000]
'PulseSpikeRate' [ 28.0028]    [  2.0002]    [ 89.0089]
...

```

Displaying the last few rows gives the highest values:

```
>> displayRows(ampDecayTau_sorted.db, 13879:13881)
ans =
'NaF'          [    250]    [    250]    [   1000]
'NaP'          [  2.5000]    [  2.5000]    [  2.5000]
'Kv3'          [    15]    [    15]    [    60]
'Kv2'          [     3]    [     3]    [     9]
'Kv4f'         [     5]    [     5]    [    25]
'KCNQ'         [   0.1000]    [   0.1000]    [   0.0100]
'SK'           [   8.5000]    [   8.5000]    [    17]
'CaHVA'        [    10]    [    10]    [    10]
'HCN'          [    30]    [     3]    [    30]
'pAcip'        [   -100]    [   -100]    [   100]
'IniSpontISICV' [  0.0027]    [  0.0027]    [9.1376e-04]
'IniSpontPotAvg' [-28.5685]    [-28.5687]    [ -67.7567]
'IniSpontSpikeRate' [ 69.0069]    [ 69.0069]    [ 14.0014]

...

```

## 5.4 Preprocessing a raw (physiology) database by elimination and averaging

Mostly, raw physiology databases are subject to redundancies and unwanted recordings. We usually apply the following steps before we start analyzing a raw physiology database. Similar steps may be employed for simulation databases, too.

### 5.4.1 Limiting range of bias currents

Recordings with high bias current are undesirable. We commonly filter-out high bias currents with:

```
>> db_bias_small =
    phys_dball(phys_dball(:, 'pAbias') > -30 &
               phys_dball(:, 'pAbias') < 30, :)
which will limit the bias current,  $i_b$ , to  $-30\text{pA} < i_b < 30\text{pA}$ .
```

### 5.4.2 Choosing few current levels

To get a profile for a neuron, usually both hyperpolarizing and depolarizing CIP-levels need to be included. Moreover, to capture the spiking frequency vs. current response of the neuron, multiple depolarizing CIP-level information may need to be included.

There are two counterparts to selecting which CIP-levels to include in a DB. First, one can select what CIP-levels are available in the raw data and what discretization levels should be used while loading the database. This is done with the `cip_list` optional parameter described in Section 5.1.1. GP recordings prior to mid-2005 have current channel data which are too noisy to be quantized to levels of 10 pA. Instead, at least a step size of 20 pA needs to be used. Later recordings have both better recordings, and feature 20 pA steps in the experimental protocol anyway.

Second, after the database is loaded, one can filter-out unwanted CIP-level traces:

```
>> phys_dball_limitedcip =
    phys_dball_big(phys_dball_big(:, 'pAcip') == -100 |
                  phys_dball_big(:, 'pAcip') == 0 |
                  phys_dball_big(:, 'pAcip') == 50 |
                  phys_dball_big(:, 'pAcip') == 100 |
                  phys_dball_big(:, 'pAcip') == 200, :)
```

This operation can be simplified to take advantage of complex query form:

```
>> phys_dball.limitedcip =  
    phys_dball.big(phys_dball.big(:, 'pAcip') == [-100; 0; 50; 100; 200])
```

which will choose rows with current levels matching any of the given values.

#### 5.4.3 Adding new columns calculated from existing measures

Some measures can be deduced from measures collected from raw data. These do not need to be calculated at time of loading the raw data, but rather can be added to the database later. Some measures must be added later because they may be composed of measurements from multiple traces or averages. Here is an example for adding a new measure:

```
>> phys_db.limitedcip_addedcols =  
    addColumn(phys_db.limitedcip, 'PulsePotSagDivMin',  
        phys_db.limitedcip(:, 'PulsePotSag').data ./  
        phys_db.limitedcip(:, 'PulsePotMin').data)
```

#### 5.4.4 Averaging multiple traces of same neuron with same CIP-level and (pharmacological) parameters

In making a one-row-per-CIP-level database, it is essential to include all available information from the raw database. Especially in physiology datasets, there may be multiple traces of a neuron where the same CIP-level and the same pharmacological conditions were applied. These rows can be averaged to obtain a single row for each CIP-level of a neuron.

Before doing this, the parameters of the raw database should only include parameters that uniquely distinguish neurons. The averaging operation tries to find each distinct set of parameters and then averages all rows that has this combination. For example, the NeuronId and pAcip parameters need to be distinct. However, the pAbias parameter does not need to be distinct for each neuron. The non-unique parameters need to be filtered-out before the averaging process. The following shows all the parameters of a raw physiology database:

```
>> phys_db  
params_tests_db, tracesets from .../cip-traces_all_axoclamp.txt  
ans =  
    num_params: 16  
        props: [0x0 struct]  
    tests_db: [1x1 tests_db]  
Optional properties of params_tests_db:  
ans =  
0x0 struct array with no fields.  
tests_db, tracesets from .../cip-traces_all_axoclamp.txt  
1527 rows in database with 182 columns, and 1 pages.  
Column names:  
    [ 1]    'pulseOn'  
    [ 2]    'pulseOff'  
    [ 3]    'traceEnd'  
    [ 4]    'pAcip'
```

```
[ 5]    'pAbias'
[ 6]    'Cadmium'
[ 7]    'PicroTx'
[ 8]    'Apamin'
[ 9]    'Glycine'
[10]    'KynAcid'
[11]    'TTX'
[12]    'XE991'
[13]    'drug_4AP'
[14]    'EBIO'
[15]    'NeuronId'
[16]    'TracesetIndex'
...
```

One can choose which parameters need to be distinct for each row by specifying as the second argument in the call to the `meanDuplicateRows` method, whereas the third argument specifies the measures to be averaged:

```
>> phys_mean_db = meanDuplicateRows(phys_db, [4 6:15], [17:161])
params_tests_db, averaged tracesets from ../cip_traces_all.txt
ans =
    num_params: 13
      props: [0x0 struct]
    tests_db: [1x1 tests_db]
```

Optional properties of `params_tests_db`:

```
ans =
0x0 struct array with no fields.
tests_db, averaged tracesets from ../cip_traces_all.txt
690 rows in database with 158 columns, and 1 pages.
Column names:
```

```
[ 1]    'pAcip'
[ 2]    'Cadmium'
[ 3]    'PicroTx'
[ 4]    'Apamin'
[ 5]    'Glycine'
[ 6]    'KynAcid'
[ 7]    'TTX'
[ 8]    'XE991'
[ 9]    'drug_4AP'
[10]    'EBIO'
[11]    'NeuronId'
[12]    'NumDuplicates'
[13]    'RowIndex'
[14]    'IniSpontISICV'
...
```

This command ignores the pulse time information and the bias current, but includes all the pharmacological parameters, in distinguishing the unique traces. It also eliminates some measures, such as the `ItemIndex`, from averaging.

## 5.5 Making a database by merging multiple rows from another database

A simple example for making a new database out of multiple rows in an existing database is combining multiple traces from the same neuron with different current pulse injection (CIP) levels. The initial database contains a row for each CIP level with redundant information, such as spontaneous period measurements.

### 5.5.1 Making a one-row-per-neuron DB from multiple CIP-level rows

Measures of same cell obtained with multiple CIP-levels can be merged to make a single row. Note that, different pharmacological conditions applied to one cell must be kept in a different rows. The following command selects measures from each of the  $\{-100, 0, 40, 100, 200\}$  CIP levels to be included in the merged database:

```
>> phys_joined_db =  
    mergeMultipleCIPsInOne(phys_mean_db(:, [1:13 16:180]),  
                           {'_H100pA', 13 + [5:14 19:24 (119 + spike_tests) 165],  
                           '_0pA', 13 + [1:4 (27 + spike_tests)]},  
                           '_D40pA', 13 + [5:11 19:24 (73 + spike_tests) 165],  
                           '_D100pA', 13 + [5:11 14:16 19:24 (73 + spike_tests)  
                                             (119 + spike_tests) 165],  
                           '_D200pA', 13 + [5:11 19:24 (73 + spike_tests) 165]}},  
                           'RowIndex_D200pA')
```

This command operates on the previously averaged database, `phys_mean_db`, where each CIP level only occurs once for each distinct pharmacological setting for each neuron. Note that, we filter-out columns 14 and 15 from the averaged DB while supplying the first argument to `mergeMultipleCIPsInOne`, which are artifacts of the averaging process and need not be included in the merged database. The second argument is a cell array of pairs of a suffix string and a corresponding list of measures for each of the CIP levels in `phys_mean_db`, in increasing order. The merged `phys_joined_db` looks like this:

```
params_tests_db, averaged tracesets from .../cip_traces_all_axoclamp.txt mult CIP  
ans =  
    num_params: 12  
    tests_db: [1x1 tests_db]  
tests_db, averaged tracesets from .../cip_traces_all_axoclamp.txt mult CIP  
179 rows in database with 258 columns, and 1 pages.  
Column names:  
[ 1] '_Cadmium'  
[ 2] '_PicroTx'  
[ 3] '_Apamin'  
[ 4] '_Glycine'  
[ 5] '_KynAcid'  
[ 6] '_TTX'  
[ 7] '_XE991'  
[ 8] '_drug_4AP'  
[ 9] '_EBIO'  
[10] '_Gabazine'
```

```
[ 11] 'NeuronId'
[ 12] 'TracesetIndex'
[ 13] 'PulseISICV_H100pA'
[ 14] 'PulseIni100msISICV_H100pA'
[ 15] 'PulseIni100msRest1SpikeRate_H100pA'
[ 16] 'PulseIni100msRest2SpikeRate_H100pA'
[ 17] 'PulseIni100msSpikeRate_H100pA'
[ 18] 'PulseIni100msSpikeRateISI_H100pA'
...
[255] 'PulseSpikeRiseTimeMean_D200pA'
[256] 'PulseSpikeRiseTimeMode_D200pA'
[257] 'PulseSpikeRiseTimeSTD_D200pA'
[258] 'PulseSpontAmpRatio_D200pA'
```

Note how each measure suffix indicate the CIP-level it belongs.

### 5.5.2 Making a one-row-per-neuron DB from dual CIP-level rows

The following statement uses the `params_tests_db/getDualCIPdb` method to merge rows of depolarizing and hyperpolarizing CIP-levels:

```
>> sdball = getDualCIPdb(dball, depol_tests, hyper_tests,
                        '', 'Hyp100pA')
```

Here, the cell array variables `depol_tests` and `hyper_tests` hold the names of measures to be selected from depolarizing CIP and hyperpolarizing CIP, respectively. The last two arguments define the suffixes to be applied to distinguish the measures from each CIP. The original DB is

```
>> dball
dball
params_tests_db, sim dataset gpsec0501
ans =
    num_params: 10
      props: [0x0 struct]
    tests_db: [1x1 tests_db]
Optional properties of params_tests_db:
ans =
0x0 struct array with no fields.
tests_db, sim dataset gpsec0501
39366 rows in database with 62 columns, and 1 pages.
Column names:

Optional properties of tests_db:
ans =
0x0 struct array with no fields.
```

## 6 Visualization

By default, MATLAB prints figures in portrait orientation with a 8x6 aspect ratio, ignoring their size on the screen. The command;

```
>> orient tall
```

changes that behavior to print a full page in portrait orientation. The command;

```
>> orient landscape
```

does the same but rotates the figure to landscape orientation. If you want the printed figure to reflect its current screen size, issue the command;

```
>> set(figurenum, 'PaperPositionMode', 'auto')
```

Figures generated by the plotting system of the PANDORA Toolbox has a special resizing capability. Everytime the figure is resized, it will be drawn from scratch after calculating proper spacing between subplots according to font size. However, in some conditions this may cause other problems, such as crashing MATLAB in figure editing mode or causing loss of manual changes to the figure. To disable the auto-resize function, issue the following command after creating the figure;

```
>> set(figurenum, 'ResizeFcn', '')
```

Finally, to print the figure, consult your Matlab manual or issue a command such as;

```
>> print -depsc2 figurename.eps
```

See below for specific types of figures you can create.

Figure 8: Example trace plot.

## 6.1 Visualizing traces

The trace, and its subclasses such as `cip_trace`, has the `plot` command overloaded to draw the raw trace in Figure 8:

```
>> a_ct = ctFromRows(mbundle, 9842, 100);
>> plot(a_ct)
```

Note that the plot in the figure has been created with a more precise control:

```
>> plotFigure(plotData(a_ct, ''), struct('PaperPosition', [0 0 3 2]))
```

## 6.2 Displaying database contents

The `displayRows` method of `tests_db` can be used to display rows of a database:

```
>> displayRows(sdball, 1:3)
ans =
'NaF'          [    250]    [    250]    [   1000]
'NaP'          [  2.5000]    [  2.5000]    [   2.5000]
'Kv3'          [    15]    [    15]    [    60]
'Kv2'          [     3]    [     3]    [     9]
'Kv4f'         [     5]    [     5]    [    25]
'KCNQ'         [  0.1000]    [  0.1000]    [   0.0100]
'SK'           [  8.5000]    [  8.5000]    [    17]
'CaHVA'        [    10]    [    10]    [    10]
'HCN'          [    30]    [     3]    [    30]
'pAcip'        [   -100]    [   -100]    [    100]
'IniSpontISICV' [  0.0027]    [  0.0027]    [9.1376e-04]
...
```

Note that, in the output, database rows appear as columns, and database columns appear as rows. See in above Section 5.3 for more example outputs from `displayRows`.

`displayRows` returns a cell array of column names juxtaposed to a matrix of values. This cell array is intended for display on the screen and for generating reports. The `displayRowsTeX` method uses output from `displayRows` to generate a  $\text{\LaTeX}$  table that can be printed or converted to PDF:

```
>> tex_string =
    displayRowsTeX(a_db(:, rows),
```

```

        'Selected rows indicating fast spiking neurons',
        struct('height', '!'));
>> string2File(tex_string, 'fast_spiking.tex');

```

With this the  $\text{\LaTeX}$  code to generate a table with the given caption is saved in a text file called `fast_spiking.tex`. This file can then be included from a regular  $\text{\LaTeX}$  document to generate PDF output. See a  $\text{\LaTeX}$  manual on how to do that.

An alternative to `displayRows` is using the `tests_db/rows2Struct` method:

```

>> s = rows2Struct(dball_full, 54023)
s =
        NaF: 500
        NaP: 2
        Kv2: 1
        Kv3: 10
        Kv4f: 40
        KCNQ: 2
        SK: 4
        CaHVA: 0.0300
        HCN: 1
        trial: 7739
        pAcip: 100
        IniSpontISICV: NaN
        IniSpontPotAvg: NaN
        IniSpontSpikeRate: 0
        IniSpontSpikeRateISI: 0
        PulseISICV: 0.0265
        PulseIni100msISICV: 0.0584
        PulseIni100msRest1SpikeRate: 40.0089
        PulseIni100msRest2SpikeRate: 40.0178
        PulseIni100msSpikeRate: 50
        PulseIni100msSpikeRateISI: 43.5256
        PulsePotAvg: -57.3737
        PulsePotMin: NaN
        PulsePotSag: NaN
        PulseSFA: 1.1698
...

```

This method returns the database contents as a structure array. It is more natural for programming interfaces to use the database contents in a structure array than a cell array. The database columns become field names in the the structure. If multiple rows are requested, the displayed output would not contain the values. The desired row can be reached via indexing (e.g., `s(1)`). For instance, analysis in `cip_trace/getProfileAllSpikes` method is done using this method for getting statistics from the `spikes_db` databases.

### 6.3 Plotting all measure histograms

For plotting all measure histograms in a DB, the following method of `tests_db` creates the horizontal stack plot in Figure 9:

```

>> mp = plotTestsHistsMatrix(renamed_model_db(:, 2:end), '',

```

Figure 9: Example measure distribution plot.

Figure 10: Example parameter distribution plot.

```

>> plotFigure(mp);
    struct('orient', 'x', 'quiet', 1, 'border', [0 0.05 0 0]))

```

## 6.4 Plotting all parameter histograms

For plotting all parameter histograms in a DB, the following method of `params_tests_db` creates the horizontal stack plot in Figure 10:

```

>> plotFigure(plotParamsHists(sdball));

```

## 6.5 Plotting database statistics

The `stats_db` object allows keeping statistical information obtained from a database. Statistics are calculated using one of the `tests_db` converter methods, such as `statsAll`, `statsMeanStd`, etc.:

```

>> my_stats = statsMeanStd(my_db(:, {'IniSpontSpikeRate', 'PulseSpikeRate'}));

```

Then, the statistics can be plotted with diamonds indicating the mean and symmetric errorbars indicating upper and lower extensions (SE or Std):

```

>> plot(my_stats);

```

which is equivalent to:

```

>> plotFigure(plot_abstract(my_stats));

```

An alternative plotting form is using filled bars with extending errorbars:

```

>> plotFigure(plot_bars(my_stats));

```

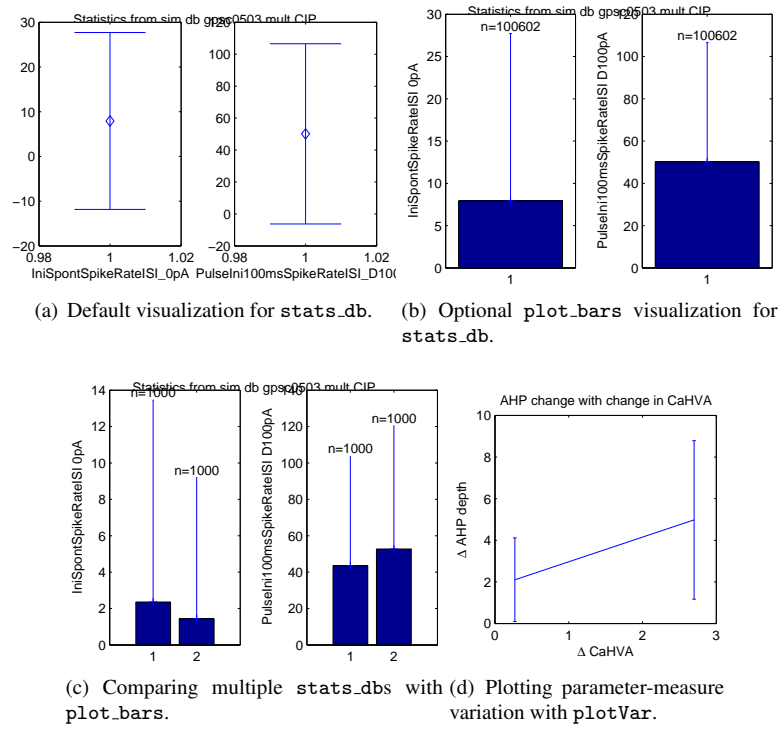

Figure 11: Plotting statistics for two selected measures.

## 6.6 Plotting parameter-measure variations

To plot the variation of a measure with a parameter the `plotVar` method of `stats_db` can be used to achieve Figure 11 (d):

```
>> plotFigure(plotVar(a_stats_db, 'CaHVA', 'AHP_depth', 'AHP change with change in CaHVA',  
    struct('quiet', 1, 'PaperPosition', [0 0 3 3])))
```

To plot all parameter-measure variations, the `plotVarMatrix` method of `stats_db` can be used (see Figure 12). `plotVarMatrix` requires the `p_stats` array of `stats_db` objects that hold the mean and standard error information (or possibly other statistics) for each of the possible parameter-measure combinations. The `p_stats` array can be created using the `paramsTestsHistsStats` method, which in turn requires the `p_t3ds` array of 3-dimensional databases each of which contain effects of a parameter invariant of other parameters. The `p_t3ds` array can be created using the `params_tests_db/invarParams` method. The sequence of commands<sup>4</sup> is then becomes:

```
>> p_t3ds = invarParams(noNaNRows(sdball))  
>> [pt_hists, p_stats] = paramsTestsHistsStats(p_t3ds)  
>> ap = plotVarMatrix(p_stats)  
>> plotFigure(ap)
```

This will create a matrix plot with as many columns as parameters and as many rows as measures in the `sdball` object. It may be difficult to read if `sdball` contains large number of measures. One can divide the measures into two plots with the following sequence of commands

```
>> sdb1 = sdball(:, [1:9, 10:35])  
>> sdb2 = sdball(:, [1:9, 36:49])
```

by choosing all parameters in both DBs, but only some measures for each. Then, the plots can be created for each DB by issuing

```
>> p1_t3ds = invarParams(sdb1)  
>> p2_t3ds = invarParams(sdb2)  
>> [pt1_hists, p1_stats] = paramsTestsHistsStats(p1_t3ds)  
>> [pt2_hists, p2_stats] = paramsTestsHistsStats(p2_t3ds)  
>> ap1 = plotVarMatrix(p1_stats)  
>> plotFigure(ap1)  
>> ap2 = plotVarMatrix(p2_stats)  
>> plotFigure(ap2)
```

## 6.7 Insets

See Figure 13 which was created with the following set of commands.

```
>> im_p = plot_abstract({50 * rand(5)}, {}, '', {}, 'image');  
>> plotFigure(plot_absolute([im_p, im_p], [0 0 1 1; 0.5 0.5 0.3 0.3]))
```

<sup>4</sup>The `noNaNRows` function is required to filter out any rows containing NaN values in measurements before running statistic functions. Otherwise, the statistics functions (such as `mean` and `std`) will eliminate NaN values within each database column automatically, scrambling the row order and loosing the association with parameters.

Figure 13: Creating insets in figures.

## 6.8 Generating a report comparing two databases

Most commonly a database of physiology neurons need to be compared to a database of a large body of simulation neurons and find best matches. One may need to see the match quality for a number of best matching candidates for each of the physiology neurons. Assuming multiple plots and tables are required to do a fair job of comparing a neuron to a thousands of simulation neurons, it becomes a difficult job to do this manually. An automatic report generation system has been built into the system for this purpose.

Currently a  $\text{\LaTeX}$  document is created that needs to be included in either a proper  $\text{\LaTeX}$  document, or included in a  $\text{LyX}$  document.<sup>5</sup> The including document should provide the context in which the included part becomes meaningful. The report contains a set of tables and figures with proper captions. The table of contents, list of figures and list of tables facilities of  $\text{\LaTeX}$  becomes useful to make the automatically generated document easily readable.

The report can be created with the command

```
>> tex_string = rankVsAllDB(sdb, phys_sdb,
                           fileset, phys_fileset);
```

where the simulation database `sdb` is searched for best matches to each row of physiology database `phys_sdb`. The dataset for each is provided for the report to contain raw data associated with best matches. The obtained report contained in `tex_string` can be saved as a ASCII  $\text{\LaTeX}$  file with

```
>> string2File(tex_string, 'myreport.tex');
```

<sup>5</sup>This document is prepared using the  $\text{LyX}$  document preparation system [?] which uses the  $\text{\LaTeX}2_{\epsilon}$  typesetting language [?].  $\text{LyX}$  is copyrighted by Matthias Ettrich and covered by the terms of the GNU General Public License (GPL), and  $\text{\LaTeX}2_{\epsilon}$  is copyrighted by D. E. Knuth and the Free Software Foundation, Inc. and is covered by both the  $\text{\TeX}$  copyright and the GNU GPL.

## A Function Reference

See Section 1.6 on how to get online help about the software within MATLAB.

### A.1 Class `chans_db`

#### A.1.1 Constructor `chans_db/chans_db`

**Summary:** A database of channel activation and kinetics.

**Usage:**

```
a_chans_db = chans_db(data, col_names, channel_info, id, props)
```

**Description:** This is a subclass of `tests_db`. Channel tables can be imported from Genesis using the `utils/chanTables2DB` script.

**Parameters:**

`data`: Database contents.

`col_names`: The channel variable names.

`channel_info`: Structure that holds scalar data elements such as `Gbar`.

`id`: An identifying string.

`props`: A structure with any optional properties.

**Returns a structure object with the following fields:**

`tests_db`, `channel_info`, `props`.

**See also:** `tests_db` (p. 255), `chanTables2DB` (p. ??)

**Author:** Cengiz Gunay [cgunay@emory.edu], 2007/06/26

---

#### A.1.2 Method `chans_db/display`

**Author:** Cengiz Gunay [cgunay@emory.edu], 2004/08/04

---

### A.1.3 Method `chans_db/get`

**Summary:** Defines generic attribute retrieval for objects.

**Author:** Cengiz Gunay `jcgunay@emory.edu`, 2004/09/14

---

### A.1.4 Method `chans_db/plotAllInf`

**Summary:** Plots the steady-state (infinity) response of all channels.

**Usage:**

```
a_plot = plotAllInf(a_chans_db, title_str, props)
```

**Parameters:**

`a_chans_db`: a `chans_db`

`title_str`: Plot title.

`props`: A structure with any optional properties.  
(rest passed to `matrixPlots`.)

**Returns:**

`a_plot`: A `plot_abstract` object that can be visualized.

**See also:** [trace](#) (p. 316), [trace/plot](#) (p. 327), [plot\\_abstract](#) (p. 180)

**Author:** Cengiz Gunay `jcgunay@emory.edu`, 2007/03/05

---

### A.1.5 Method `chans_db/plotAllVars`

**Summary:** Plot all channel variables by grouping activation and time constant curves per channel.

**Usage:**

```
a_plot = plotAllVars(a_chans_db, title_str, props)
```

**Parameters:**

`a_chans_db`: A `chans_db` describing channel variables.

`id`: String that identify the source of the tables structure.

`props`: A structure with any optional properties.  
(rest passed to `plot_abstract`.)

**Returns:**

`a_plot`: A `plot_abstract` object that can be visualized.

**See also:** [trace](#) (p. 316), [trace/plot](#) (p. 327), [plot\\_abstract](#) (p. 180)

**Author:** Cengiz Gunay `jcgunay@emory.edu`, 2007/03/05

---

### A.1.6 Method `chans_db/plotGateVars`

**Summary:** Plot given channel gate variables of the same channel superposed.

**Usage:**

```
a_plot = plotGateVars(a_chans_db, chan_name, gate_subnames, title_str, props)
```

**Parameters:**

`a_chans_db`: A `chans_db` describing channel variables.

`chan_name`: Name of channel that make up the stem of variable names.

`gate_subnames`: Gate names of the channel.

`title_str`: (Optional) A string to be concatenated to the title.

`props`: A structure with any optional properties.

`usePowers`: Use the gate powers, Luke.  
(rest passed to `plot_abstract`.)

**Returns:**

`a_plot`: A `plot_abstract` object that can be visualized.

**See also:** [trace](#) (p. 316), [trace/plot](#) (p. 327), [plot\\_abstract](#) (p. 180)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2007/07/01

---

### A.1.7 Method `chans_db/plotInf`

**Summary:** Plot the product of minf variables and the gmax of the given channel.

**Usage:**

```
a_plot = plotInf(a_chans_db, chan_name, gate_subnames, title_str, props)
```

**Parameters:**

`a_chans_db`: A `chans_db` describing channel variables.

`chan_name`: Name of channel that make up the stem of variable names.

`gate_subnames`: Gate names of the channel.

`title_str`: (Optional) A string to be concatenated to the title.

`props`: A structure with any optional properties.  
(rest passed to `plot_abstract`.)

**Returns:**

`a_plot`: A `plot_abstract` object that can be visualized.

**See also:** [trace](#) (p. 316), [trace/plot](#) (p. 327), [plot\\_abstract](#) (p. 180)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2007/07/01

---

#### A.1.8 Method `chans_db/set`

**Summary:** Generic method for setting object attributes.

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/10/08

---

### A.2 Class `cip_trace`

#### A.2.1 Constructor `cip_trace/cip_trace`

**Summary:** A trace with a current injection pulse (CIP).

**Usage:**

```
obj = cip_trace(datasrc, dt, dy, pulse_time_start, pulse_time_width, id, props)
```

**Parameters:**

`datasrc`: A vector of data points containing the spike shape.

`dt`: Time resolution [s].

`dy`: y-axis resolution [ISI (V, A, etc.)]

`pulse_time_start`, `pulse_time_width`: Start and width of the pulse [dt]

`id`: Identification string.

`props`: A structure with any optional properties, such as:

`trace_time_start`: Samples in the beginning to discard [dt]  
(see `trace` for more)

**Returns a structure object with the following fields:**

`trace`, `pulse_time_start`, `pulse_time_width`, `props`.

**See also:** [trace](#) (p. 316), [spikes](#) (p. 227), [spike\\_shape](#) (p. 215), [period](#) (p. 162)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/07/30

---

### A.2.2 Method `cip_trace/calcPulsePotAvg`

**Summary:** Calculates the average potential value of the CIP period of the `cip_trace`, `t`.

**Usage:**

```
avg_val = calcPulsePotAvg(t)
```

**Parameters:**

`t`: A `cip_trace` object.

**Returns:**

`avg_val`: The avg value [dy].

**See also:** [period](#) (p. 162), [trace](#) (p. 316), [trace/calcAvg](#) (p. 320)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/08/25

---

### A.2.3 Method `cip_trace/calcPulsePotSag`

**Summary:** Calculates the minimal sag and sag amount of the CIP period of the `cip_trace`, `t`.

**Usage:**

```
[min_val, min_idx, sag_val] = calcPulsePotSag(t)
```

**Description:** The minimal sag is the minimal potential value of the first half of the CIP period. The sag amount is calculated by comparing this to the steady-state value at the end of the CIP period.

**Parameters:**

`t`: A `cip_trace` object.

**Returns:**

`min_val`: The min value [dy]. `min_idx`: The index of the min value [dt]. `sag_val`: The sag amount [dy].

**See also:** [period](#) (p. 162), [trace](#) (p. 316), [trace/calcMin](#) (p. 321)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/08/25

---

#### A.2.4 Method `cip_trace/calcRecSpontPotAvg`

**Summary:** Calculates the average potential value of the recovery period of the `cip_trace`, `t`.

**Usage:**

```
avg_val = calcRecSpontPotAvg(t)
```

**Parameters:**

`t`: A `cip_trace` object.

**Returns:**

`avg_val`: The avg value [dy].

**See also:** [period](#) (p. 162), [trace](#) (p. 316), [trace/calcAvg](#) (p. 320)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/08/25

---

#### A.2.5 Method `cip_trace/display`

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/08/04

---

#### A.2.6 Method `cip_trace/get`

**Summary:** Defines generic attribute retrieval for objects.

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/09/14

---

#### A.2.7 Method `cip_trace/getBurstResults`

**Summary:** Calculate test results related to Burst behavior.

**Usage:**

```
results = getRateResults(a_cip_trace, a_spikes)
```

**Parameters:**

`a_cip_trace`: A `cip_trace` object.

`a_spikes`: A spikes object.

**Returns:**

`results`: A structure associating test names with result values.

**See also:** [cip\\_trace](#) (p. 56), [spikes](#) (p. 227), [spike\\_shape](#) (p. 215)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/08/30, Tom Sangrey

---

### A.2.8 Method `cip_trace/getCIPResults`

**Summary:** Calculate test results about CIP protocol.

**Usage:**

```
results = getCIPResults(a_cip_trace, a_spikes)
```

**Parameters:**

`a_cip_trace`: A `cip_trace` object.

`a_spikes`: A spikes object.

**Returns:**

results: A structure associating test names with result values.

**See also:** [`cip\_trace`](#) (p. 56), [`spikes`](#) (p. 227), [`spike\_shape`](#) (p. 215)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/08/30

---

### A.2.9 Method `cip_trace/getProfileAllSpikes`

**Summary:** Creates a `cip_trace_allspikes_profile` object by collecting test results of a `cip_trace`, analyzing each individual spike.

**Usage:**

```
profile_obj = getProfileAllSpikes(a_cip_trace)
```

**Description:** Analyzes the spontaneous (`periodIniSpont`), pulse (`periodPulse`) and the recovery (`periodRecSpont`) periods separately and produces spike shape distribution results. Rate and CIP measurements are added to these.

**Parameters:**

`a_cip_trace`: A `cip_trace` object.

**Returns:**

profile\_obj: A `cip_trace_allspikes_profile` object.

**See also:** [`cip\_trace`](#) (p. 56), [`cip\_trace\_allspikes\_profile`](#) (p. 70)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2005/04/26

---

#### A.2.10 Method `cip_trace/getPulseSpike`

**Summary:** Convert a spike in the CIP period to a `spike_shape` object.

**Usage:**

```
obj = getPulseSpike(trace, spikes, spike_num, props)
```

**Description:** Creates a `spike_shape` object from desired spike. Calls `trace/getSpike` method.

**Parameters:**

`trace`: A trace object.

`spikes`: (Optional) A spikes object obtained from trace, calculated automatically if given as [].

`spike_num`: The index of spike to extract.

`props`: A structure with any optional properties passed to `getSpike`.

**Example:**

Get 2nd pulse spike and plot it:

```
>> plotFigure(plotResults(getPulseSpike(t, [], 2)))
```

**See also:** [spike\\_shape](#) (p. 215), [trace/getSpike](#) (p. 324)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2005/04/19

---

#### A.2.11 Method `cip_trace/getRateResults`

**Summary:** Calculate test results related to spike rate.

**Usage:**

```
results = getRateResults(a_cip_trace, a_spikes)
```

**Parameters:**

`a_cip_trace`: A `cip_trace` object.

`a_spikes`: A spikes object.

**Returns:**

`results`: A structure associating test names with result values.

**See also:** [cip\\_trace](#) (p. 56), [spikes](#) (p. 227), [spike\\_shape](#) (p. 215)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2004/08/30

---

**A.2.12 Method** `cip_trace/getRecSpontSpike`

**Summary:** Convert a spike in the CIP period to a `spike_shape` object.

**Usage:**

```
obj = getRecSpontSpike(trace, spikes, spike_num, props)
```

**Description:** Creates a `spike_shape` object from desired spike.

**Parameters:**

`trace`: A trace object.

`spikes`: A spikes object on trace.

`spike_num`: The index of spike to extract.

**See also:** [spike\\_shape](#) (p. 215)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2005/05/08

---

**A.2.13 Method** `cip_trace/getResults`

**Summary:** Calculate test results given a `a_spikes` object.

**Usage:**

```
results = getResults(a_cip_trace, a_spikes)
```

**Parameters:**

`a_cip_trace`: A `cip_trace` object.

`a_spikes`: A spikes object.

**Returns:**

`results`: A structure associating test names with result values.

**See also:** [cip\\_trace](#) (p. 56), [spikes](#) (p. 227), [spike\\_shape](#) (p. 215)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/09/14

---

#### A.2.14 Method `cip_trace/measureNames`

**Summary:** Returns taxonomy of measurements collected by `cip_trace`.

**Usage:**

```
measures = measureNames(a_cip_trace)
```

**Description:** This is a static method, in the sense that it does not need the object passed as argument. Therefore it can be called directly by using the default constructor; e.g., `measureNames(cip_trace)`. The measure names are required for merging columns of a database generated by profiling these objects.

**Parameters:**

`a_cip_trace`: A `cip_trace` object. It can be created by the the default constructor '`cip_trace`'.

**Returns:**

`measures`: A structure with cell arrays of types of measures, and measure names inside.

**See also:** `getResults` (p. ??), `getProfileAllSpikes` (p. ??), `mergeMultipleCIPsInOne` (p. ??)

**Author:** Cengiz Gunay `jcgunay@emory.edu`, 2004/07/30

---

#### A.2.15 Method `cip_trace/periodIniSpont`

**Summary:** Returns the initial spontaneous activity period of `cip_trace`, `t`.

**Usage:**

```
the_period = periodIniSpont(t)
```

**Parameters:**

`t`: A trace object.

**Returns:**

`the_period`: A period object.

**See also:** `period` (p. 162), `cip_trace` (p. 56), `trace` (p. 316)

**Author:** Cengiz Gunay `jcgunay@emory.edu`, 2004/08/25

---

**A.2.16 Method** `cip_trace/periodPulse`

**Summary:** Returns the CIP period of `cip_trace`, `t`.

**Usage:**

```
the_period = periodPulse(t)
```

**Parameters:**

`t`: A trace object.

**Returns:**

`the_period`: A period object.

**See also:** [period](#) (p. 162), [cip\\_trace](#) (p. 56), [trace](#) (p. 316)

**Author:** Cengiz Gunay `jcgunay@emory.edu`, 2004/08/25

---

**A.2.17 Method** `cip_trace/periodPulseHalf1`

**Summary:** Returns the first half of the CIP period of `cip_trace`, `t`.

**Usage:**

```
the_period = periodPulseHalf1(t)
```

**Parameters:**

`t`: A trace object.

**Returns:**

`the_period`: A period object.

**See also:** [period](#) (p. 162), [cip\\_trace](#) (p. 56), [trace](#) (p. 316)

**Author:** Cengiz Gunay `jcgunay@emory.edu`, 2004/08/25

---

**A.2.18 Method** `cip_trace/periodPulseIni100ms`

**Summary:** Returns the first 100ms of the CIP period of `cip_trace`, `t`.

**Usage:**

```
the_period = periodPulseIni100ms(t)
```

**Parameters:**

`t`: A trace object.

**Returns:**

the\_period: A period object.

**See also:** [period](#) (p. 162), [cip\\_trace](#) (p. 56), [trace](#) (p. 316)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/08/25

---

**A.2.19 Method** `cip_trace/periodPulseIni100msRest1`

**Usage:**

```
the_period = periodPulseIni50msRest1(t)
```

**Parameters:**

t: A trace object.

**Returns:**

the\_period: A period object.

**See also:** [period](#) (p. 162), [cip\\_trace](#) (p. 56), [trace](#) (p. 316)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/08/25

---

**A.2.20 Method** `cip_trace/periodPulseIni100msRest2`

**Usage:**

```
the_period = periodPulseIni50msRest2(t)
```

**Parameters:**

t: A trace object.

**Returns:**

the\_period: A period object.

**See also:** [period](#) (p. 162), [cip\\_trace](#) (p. 56), [trace](#) (p. 316)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/08/25

---

**A.2.21 Method** `cip_trace/periodPulseIni50ms`

**Summary:** Returns the first 50ms of the CIP period of `cip_trace`, `t`.

**Usage:**

```
the_period = periodPulseIni50ms(t)
```

**Parameters:**

`t`: A trace object.

**Returns:**

`the_period`: A period object.

**See also:** [period](#) (p. 162), [cip\\_trace](#) (p. 56), [trace](#) (p. 316)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/08/25

---

**A.2.22 Method** `cip_trace/periodPulseIni50msRest1`

**Summary:** Returns the first half of the rest after the first 50ms of the CIP period of `cip_trace`, `t`.

**Usage:**

```
the_period = periodPulseIni50msRest1(t)
```

**Parameters:**

`t`: A trace object.

**Returns:**

`the_period`: A period object.

**See also:** [period](#) (p. 162), [cip\\_trace](#) (p. 56), [trace](#) (p. 316)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/08/25

---

**A.2.23 Method** `cip_trace/periodPulseIni50msRest2`

**Summary:** Returns the second half of the rest after the first 50ms of the CIP period of `cip_trace`, `t`.

**Usage:**

```
the_period = periodPulseIni50msRest2(t)
```

**Parameters:**

t: A trace object.

**Returns:**

the\_period: A period object.

**See also:** [period](#) (p. 162), [cip\\_trace](#) (p. 56), [trace](#) (p. 316)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/08/25

---

**A.2.24 Method** `cip_trace/periodRecSpont`

**Summary:** Returns the recovery spontaneous activity period of `cip_trace`, t.

**Usage:**

```
the_period = periodRecSpont(t)
```

**Parameters:**

t: A trace object.

**Returns:**

the\_period: A period object.

**See also:** [period](#) (p. 162), [cip\\_trace](#) (p. 56), [trace](#) (p. 316)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/08/25

---

**A.2.25 Method** `cip_trace/periodRecSpont1`

**Summary:** Returns the first half of the recovery spontaneous activity period of `cip_trace`, t.

**Usage:**

```
the_period = periodRecSpont1(t)
```

**Parameters:**

t: A trace object.

**Returns:**

the\_period: A period object.

**See also:** [period](#) (p. 162), [cip\\_trace](#) (p. 56), [trace](#) (p. 316)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/08/25

---

**A.2.26 Method** `cip_trace/periodRecSpont2`

**Summary:** Returns the second half of the recovery spontaneous activity period of `cip_trace`, `t`.

**Usage:**

```
the_period = periodRecSpont2(t)
```

**Parameters:**

`t`: A trace object.

**Returns:**

`the_period`: A period object.

**See also:** [period](#) (p. 162), [cip\\_trace](#) (p. 56), [trace](#) (p. 316)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/08/25

---

**A.2.27 Method** `cip_trace/periodRecSpontIniPeriod`

**Usage:**

```
the_period = periodRecSpont(t)
```

**Parameters:**

`t`: A trace object.

`iniPeriod`: the time following pulse offset that is kept, the rest of the time is ignored.

**Returns:**

`the_period`: A period object.

**See also:** [period](#) (p. 162), [cip\\_trace](#) (p. 56), [trace](#) (p. 316)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), Tom Sangrey 2006/01/26

---

**A.2.28 Method** `cip_trace/periodRecSpontRestPeriod`

**Usage:**

```
the_period = periodRecSpont(t)
```

**Parameters:**

`t`: A trace object.

**iniPeriod:** the time following pulse offset that is ignored. The rest of the time is kept

**Returns:**

**the\_period:** A period object.

**See also:** [period](#) (p. 162), [cip\\_trace](#) (p. 56), [trace](#) (p. 316)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), Tom Sangrey 2006/01/26

---

**A.2.29 Method `cip_trace/plotData`**

**Summary:** Plots a trace by calling `trace/plotData` but also adds optional decorations.

**Usage:**

```
a_plot = plotData(t, title_str, props)
```

**Description:** If `t` is a vector of traces, returns a vector of plot objects.

**Parameters:**

**t:** A trace object.

**title\_str:** (Optional) String to append to plot title.

**props:** A structure with any optional properties.

**stimBar:** If true, put a bar indicating the CIP duration.  
(rest passed to `trace/plotData`)

**Returns:**

**a\_plot:** A `plot_abstract` object that can be visualized.

**See also:** [trace](#) (p. 316), [trace/plot](#) (p. 327), [plot\\_abstract](#) (p. 180)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/11/17

---

**A.2.30 Method `cip_trace/plot_abstract`**

**Summary:** Plots a trace by calling `plotData`.

**Usage:**

```
a_plot = plot_abstract(t, title_str, props)
```

**Description:** If `t` is a vector of traces, returns a vector of plot objects.

**Parameters:**

**t:** A trace object.

**title\_str:** (Optional) String to append to plot title.  
**props:** A structure with any optional properties.  
**timeScale:** 's' for seconds, or 'ms' for milliseconds.  
(rest passed to plot\_abstract.)

**Returns:**

a\_plot: A plot\_abstract object that can be visualized.

**See also:** [trace](#) (p. 316), [trace/plot](#) (p. 327), [plot\\_abstract](#) (p. 180)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2004/11/17

---

**A.2.31 Method** cip\_trace/set

**Summary:** Generic method for setting object attributes.

**Author:** Cengiz Gunay jcgunay@emory.edu, 2004/10/08

---

**A.2.32 Method** cip\_trace/spikes

**Summary:** Convert cip\_trace to spikes object for spike timing calculations.

**Usage:**

```
obj = spikes(trace, plotit)
```

**Description:** Creates a spikes object by finding the spikes in the three separate periods, initial spontaneous activity period, CIP period, and final recovery period.

**Parameters:**

**trace:** A trace object.  
**plotit:** If non-zero, a plot is generated for showing spikes found (optional).

**See also:** [spikes](#) (p. 227), [period](#) (p. 162)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2004/08/25

---

**A.2.33 Method** cip\_trace/subsref

**Summary:** Defines generic indexing for objects.

**Author:** Cengiz Gunay jcgunay@emory.edu, 2004/08/04

---

### A.3 Class `cip_trace_allspikes_profile`

#### A.3.1 Constructor `cip_trace_allspikes_profile/cip_trace_allspikes_profile`

**Summary:** Creates and collects test results of a `cip_trace`.

**Usage:**

```
obj = cip_trace_allspikes_profile(a_cip_trace, a_spikes, a_spont_spike_shape, results, id, props)
```

**Description:** This is a subclass of `results_profile`. It is made to be used from subclass constructors.

**Parameters:**

`a_cip_trace`: A `cip_trace` object.

`a_spikes`: A spikes object.

`spont_spikes_db`, `pulse_spikes_db`, `recov_spikes_db`: tests\_dbs with spontaneous, pulse and recovery period spike info.

`results_obj`: A `results_profile` object with test results.

`id`: Identification string.

`props`: A structure with any optional properties.

**Returns a structure object with the following fields:**

`trace`, `spikes`, `spont_spikes_db`, `pulse_spikes_db`, `recov_spikes_db`, `props`

**See also:** [`cip\_trace`](#) (p. 56), [`spikes`](#) (p. 227), [`tests\_db`](#) (p. 255)

**Author:** Cengiz Gunay {cgunay@emory.edu}, 2005/05/04

---

#### A.3.2 Method `cip_trace_allspikes_profile/display`

**Author:** Cengiz Gunay {cgunay@emory.edu}, 2004/08/04

---

#### A.3.3 Method `cip_trace_allspikes_profile/get`

**Summary:** Defines generic attribute retrieval for objects.

**Author:** Cengiz Gunay {cgunay@emory.edu}, 2004/09/14

---

#### A.3.4 Method `cip_trace_allspikes_profile/plotRowSpontSpikeAnal`

**Summary:** Creates a row of plots that show spontaneous spikes, starting from the whole trace, zooming into the individual spike.

**Usage:**

```
a_plot = plotRowSpontSpikeAnal(prof, title_str)
```

**Parameters:**

`prof`: A `cip_trace_allspikes_profile` object.

`title_str`: (Optional) String to append to plot title.

**Returns:**

`a_plot`: A `plot_abstract` object that can be visualized.

**See also:** [trace](#) (p. 316), [cip\\_trace](#) (p. 56), [spike\\_shape/plotCompareMethodsSimple](#) (p. 224), [plot\\_abstract](#) (p. 180)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2005/05/23

---

#### A.3.5 Method `cip_trace_allspikes_profile/set`

**Summary:** Generic method for setting object attributes.

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/10/08

---

### A.4 Class `cip_trace_profile`

#### A.4.1 Constructor `cip_trace_profile/cip_trace_profile`

**Summary:** Creates and collects test results of a `cip_trace`.

**Description:** The first usage is fully customizable to be used from subclass constructors. The second usage generates the spikes and `spont_spike_shape` objects, and collects some generic test results from them.

**Parameters:**

`data_src`: The trace column OR the filename.

`dt`: Time resolution [s]

`dy`: y-axis resolution [ISI (V, A, etc.)]

`pulse_time_start`, `pulse_time_width`: Start and width of the pulse [dt]

`id`: Identification string.

`props`: See trace object.

**Returns a structure object with the following fields:**

trace, spikes, spont\_spike\_shape, results, id, props.

**See also:** [cip\\_trace](#) (p. 56), [spikes](#) (p. 227), [spike\\_shape](#) (p. 215)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/08/25

---

**A.4.2 Method `cip_trace_profile/display`**

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/08/04

---

**A.4.3 Method `cip_trace_profile/get`**

**Summary:** Defines generic attribute retrieval for objects.

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/09/14

---

**A.4.4 Method `cip_trace_profile/plot`**

**Summary:** Plots a `cip_trace_profile` object.

**Usage:**

```
h = plot(t)
```

**Description:** Plots contents of this object.

**Parameters:**

t: A `cip_trace_profile` object.

**Returns:**

h: Plot handle(s).

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/09/15

---

**A.4.5 Method `cip_trace_profile/set`**

**Summary:** Generic method for setting object attributes.

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/10/08

---

#### A.4.6 Method `cip_trace_profile/subsref`

**Summary:** Defines generic indexing for objects.

**Author:** Cengiz Gunay `ıcgunay@emory.edu`, 2004/08/04

---

### A.5 Class `cip_traces_dataset`

#### A.5.1 Constructor `cip_traces_dataset/cip_traces_dataset`

**Summary:** Dataset of `cip_traces` objects, each with varying `cip` magnitudes.

**Usage:**

```
obj = cip_traces_dataset(ts, cipmag, id, props)
```

**Description:** This is a subclass of `params_tests_fileset`.

**Parameters:**

`ts`: A cell array of `cip_traces` objects.

`cipmag`: A single `cip` magnitude to trace take from objects.

`id`: An identification string for the whole dataset.

`props`: A structure with any optional properties passed to `cip_trace_profile`.

**Returns a structure object with the following fields:**

`params_tests_dataset`, `cipmag`, `props` (see above).

**See also:** `cip_traces` (p. ??), `params_tests_fileset` (p. 157), `params_tests_db` (p. 138)

**Author:** Cengiz Gunay `ıcgunay@emory.edu`, 2004/11/30

---

#### A.5.2 Method `cip_traces_dataset/cip_trace_profile`

**Summary:** Loads a raw `cip_trace_profile` given a index to this dataset.

**Usage:**

```
a_cip_trace_profile = cip_trace_profile(dataset, index)
```

**Parameters:**

`dataset`: A `params_tests_dataset`.

`index`: Index of file in dataset.

**Returns:**

`a_cip_trace_profile`: A `cip_trace_profile` object.

**See also:** [cip\\_trace\\_profile](#) (p. 71), [params\\_tests\\_dataset](#) (p. 131)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/09/14

---

#### A.5.3 Method `cip_traces_dataset/display`

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/08/04

---

#### A.5.4 Method `cip_traces_dataset/get`

**Summary:** Defines generic attribute retrieval for objects.

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/09/14

---

#### A.5.5 Method `cip_traces_dataset/getItemParams`

**Usage:**

```
params_row = getParams(dataset, index)
```

**Parameters:**

**dataset:** A `params_tests_dataset`.

**index:** Index of item in dataset.

**Returns:**

`params_row`: Parameter values in the same order of `paramNames`

**See also:** [itemResultsRow](#) (p. ??), [params\\_tests\\_dataset](#) (p. 131), [paramNames](#) (p. ??), [testNames](#) (p. ??)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/12/06

---

#### A.5.6 Method `cip_traces_dataset/loadItemProfile`

**Summary:** Loads a profile object from a raw data item in the dataset.

**Usage:**

```
a_profile = loadItemProfile(dataset, index)
```

**Description:** Subclasses should overload this function to load the specific profile object they desire. The profile class should define a `getResults` method which is used in the `itemResultsRow` method.

**Parameters:**

**dataset:** A params\_tests\_dataset.  
**index:** Index of item in dataset.

**Returns:**

a\_profile: A profile object that implements the getResults method.

**See also:** [itemResultsRow](#) (p. ??), [params\\_tests\\_dataset](#) (p. 131), [paramNames](#) (p. ??), [testNames](#) (p. ??)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/09/14

---

**A.5.7 Method** `cip_traces_dataset/paramNames`

**Summary:** Returns the only parameter, 'pAcip,' for this fileset.

**Usage:**

```
param_names = paramNames(fileset)
```

**Description:** Looks at the filename of the first file to find the parameter names.

**Parameters:**

**fileset:** A params\_tests\_fileset.

**Returns:**

params\_names: Cell array with ordered parameter names.

**See also:** [params\\_tests\\_fileset](#) (p. 157), [paramNames](#) (p. ??), [testNames](#) (p. ??)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/12/06

---

**A.5.8 Method** `cip_traces_dataset/set`

**Summary:** Generic method for setting object attributes.

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/10/08

---

**A.5.9 Method** `cip_traces_dataset/subsref`

**Summary:** Defines generic indexing for objects.

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/08/04

---

## A.6 Class `cip_traceset`

### A.6.1 Constructor `cip_traceset/cip_traceset`

**Summary:** A traceset with varying cip magnitudes from a single `cip_traces` object.

**Usage:**

```
obj = cip_traceset(ct, cip_mags, dy, props)
```

**Description:** This is a subclass of `params_tests.fileset`. This traceset can create a mini-database from a single `cip_traces` object. The list contains `cip_mags`. `cip_traceset.dataset` should be used to load multiple `cip_traceset` objects.

**Parameters:**

`ct`: A `cip_traces` object.

`cip_mags`: An array of cip magnitudes to select from the object.

`dy`: y-axis resolution, [V] or [A] (default=1e-3).

`props`: A structure with any optional properties.

`offsetPotential`: Add this to physiology trace as compensation.

**Returns a structure object with the following fields:**

`params_tests.dataset`, `ct`, `props` (see above).

**See also:** [`cip\_traces`](#) (p. ??), [`params\_tests.fileset`](#) (p. 157), [`params\_tests.db`](#) (p. 138)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/11/30

---

### A.6.2 Method `cip_traceset/cip_trace_profile`

**Summary:** Loads a raw `cip_trace_profile` given an index in this traceset.

**Usage:**

```
a_cip_trace_profile = cip_trace_profile(traceset, index)
```

**Parameters:**

`traceset`: A `cip_traceset`.

`index`: Index of item in traceset.

**Returns:**

`a_cip_trace_profile`: A `cip_trace_profile` object.

**See also:** [`cip\_trace\_profile`](#) (p. 71), [`params\_tests.dataset`](#) (p. 131)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/09/14

---

**A.6.3 Method** `cip_traceset/display`

**Author:** Cengiz Gunay `jcgunay@emory.edu`, 2004/08/04

---

**A.6.4 Method** `cip_traceset/get`

**Summary:** Defines generic attribute retrieval for objects.

**Author:** Cengiz Gunay `jcgunay@emory.edu`, 2004/09/14

---

**A.6.5 Method** `cip_traceset/getItemParams`

**Usage:**

```
params_row = getParams(dataset, index)
```

**Parameters:**

**dataset:** A `params_tests_dataset`.

**index:** Index of item in dataset.

**a\_profile:** A profile object for the item (optional).

**Returns:**

`params_row`: Parameter values in the same order of `paramNames`

**See also:** `itemResultsRow` (p. ??), `params_tests_dataset` (p. 131), `paramNames` (p. ??), `testNames` (p. ??)

**Author:** Cengiz Gunay `jcgunay@emory.edu`, 2004/12/06

---

**A.6.6 Method** `cip_traceset/loadItemProfile`

**Summary:** Loads a profile object from a raw data item in the dataset.

**Usage:**

```
a_profile = loadItemProfile(dataset, index)
```

**Description:** Subclasses should overload this function to load the specific profile object they desire. The profile class should define a `getResults` method which is used in the `itemResultsRow` method.

**Parameters:**

**dataset:** A `params_tests_dataset`.

**index:** Index of item in dataset.

**Returns:**

a\_profile: A profile object that implements the getResults method.

**See also:** `itemResultsRow` (p. ??), `params_tests_dataset` (p. 131), `paramNames` (p. ??), `testNames` (p. ??)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2004/09/14

---

**A.6.7 Method** `cip_traceset/paramNames`

**Summary:** Returns the only parameter, 'pAcip,' for this traceset.

**Usage:**

```
param_names = paramNames(traceset)
```

**Description:** Looks at the filename of the first file to find the parameter names.

**Parameters:**

traceset: A `cip_traceset`.

**Returns:**

params\_names: Cell array with ordered parameter names.

**See also:** `params_tests_dataset` (p. 131), `paramNames` (p. ??), `testNames` (p. ??)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2004/12/06

---

**A.7 Class** `cip_traceset_dataset`

**A.7.1 Constructor** `cip_traceset_dataset/cip_traceset_dataset`

**Summary:** Dataset of multiple cip magnitudes from `cip_traces` objects .

**Usage:**

```
obj = cip_traceset_dataset(cts, cip_mags, dy, id, props)
```

**Description:** This is a subclass of `params_tests_dataset`. Designed to extract a trace for each cip magnitude from the `cip_traceset` objects contained. Uses `cip_traceset` objects to extract multiple traces from each `cip_traces` object.

**Parameters:**

cts: Array or cell array of `cip_traces` objects.

cip\_mags: An array of cip magnitudes to select from each `cip_traces` object.

dy: y-axis resolution, [V] or [A] (default = 1e-3).

**id:** An identification string.

**props:** A structure with any optional properties passed to `cip_traceset`.

**Returns a structure object with the following fields:**

`params_tests.dataset`, `cip_mags`

**See also:** [physiol\\_cip\\_traceset](#) (p. 170), [params\\_tests.dataset](#) (p. 131), [params\\_tests.db](#) (p. 138)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2005/01/28

---

### A.7.2 Method `cip_traceset.dataset/display`

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/08/04

---

### A.7.3 Method `cip_traceset.dataset/get`

**Summary:** Defines generic attribute retrieval for objects.

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/09/14

---

### A.7.4 Method `cip_traceset.dataset/loadItemProfile`

**Summary:** Loads a `cip_trace_profile` object from a raw data file in the fileset.

**Usage:**

```
a_profile = loadItemProfile(fileset, neuron_id, trace_index)
```

**Parameters:**

**fileset:** A `physiol_cip_traceset` object.

**neuron\_id :** tells which item in fileset (corresponds to `cells_filename`) to use  
grab the cell information

**trace\_index:** Index of file in traceset.

**Returns:**

**a\_profile:** A profile object that implements the `getResults` method.

**See also:** [itemResultsRow](#) (p. ??), [params\\_tests.fileset](#) (p. 157), [paramNames](#) (p. ??), [testNames](#) (p. ??)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/09/14 and Tom Sangrey

---

### A.7.5 Method `cip_traceset_dataset/readDBItems`

**Summary:** Reads all items to generate a `params_tests_db` object.

**Usage:**

```
[params, param_names, tests, test_names] = readDBItems(obj)
```

**Description:** This is a specific method to convert from `cip_traceset_dataset` to a `params_tests_db`, or a subclass. Output of this function can be directly fed to the constructor of a `params_tests_db` or a subclass.

**Parameters:**

`obj`: A `physiol_cip_traceset_fileset`

**Returns:**

`params`, `param_names`, `tests`, `test_names`: See `params_tests_db`.

**See also:** [params\\_tests\\_db](#) (p. 138), [params\\_tests\\_fileset](#) (p. 157), [itemResultsRow testNames](#) (p. ??), [paramNames](#) (p. ??), [physiol\\_cip\\_traceset\\_fileset](#) (p. 175)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2005/01/28

---

## A.8 Class `cluster_db`

### A.8.1 Constructor `cluster_db/cluster_db`

**Summary:** A database of cluster centroids generated by a clustering algorithm from a rows of `orig_db`.

**Usage:**

```
a_cluster_db = cluster_db(data, col_names, orig_db, cluster_idx, id, props)
```

**Description:** This is a subclass of `tests_db`. Use one of the clustering methods in `tests_db`, such as `kmeansCluster`, to get an instance of this class.

**Parameters:**

`data`: Database contents.

`col_names`: The column names.

`orig_db`: DB whose rows are clustered.

`cluster_idx`: Array of cluster numbers that correspond to each row in `orig_db`.

`id`: An identifying string.

`props`: A structure with any optional properties.

`sumDistances`: Total distance of elements within each cluster.

**distanceMeasure:** Measure used to find clusters (Default='correlation')

**Returns a structure object with the following fields:**

**tests\_db, orig\_db:** original DB from which clusters were obtained, **cluster\_idx:** Array associating rows of orig\_db to each cluster here. **props.**

**See also:** [tests\\_db](#) (p. 255), [tests\\_db/kmeansCluster](#) (p. 278)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2005/04/08

---

**A.8.2 Method cluster\_db/display**

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/08/04

---

**A.8.3 Method cluster\_db/get**

**Summary:** Defines generic attribute retrieval for objects.

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/09/14

---

**A.8.4 Method cluster\_db/plotHist**

**Summary:** Creates a histogram plot showing the clustering memberships.

**Usage:**

```
a_plot = plotHist(a_cluster_db, title_str)
```

**Parameters:**

**a\_cluster\_db:** A cluster\_db object.  
**title\_str:** (Optional) String to append to plot title.

**Returns:**

**a\_plot:** A plot\_abstract object that can be plotted.

**See also:** [plot\\_abstract](#) (p. 180), [plotFigure](#) (p. ??), [histogram\\_db](#) (p. 100), [histogram\\_db/plot\\_abstract](#) (p. 105)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2005/04/08

---

#### A.8.5 Method `cluster_db/plotQuality`

**Summary:** Creates a `plot_abstract` of the silhouette plot showing the clustering quality.

**Usage:**

```
a_plot = plotQuality(a_cluster_db, title_str)
```

**Parameters:**

`a_cluster_db`: A `cluster_db` object.

`title_str`: (Optional) String to append to plot title.

**Returns:**

`a_plot`: A `plot_abstract` object that can be plotted.

**See also:** [plot\\_abstract](#) (p. 180), [plotFigure](#) (p. ??), [silhouette](#) (p. ??)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2005/04/08

---

#### A.8.6 Method `cluster_db/plot_abstract`

**Summary:** Creates a vertical `plot_stack` of silhouette and membership histograms for the clusters.

**Usage:**

```
a_plot = plot_abstract(a_cluster_db, title_str)
```

**Parameters:**

`a_cluster_db`: A `cluster_db` object.

`title_str`: (Optional) String to append to plot title.

**Returns:**

`a_plot`: A `plot_abstract` object that can be plotted.

**See also:** [cluster\\_db/plotQuality](#) (p. 82), [cluster\\_db/plotHist](#) (p. 81)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2005/04/08

---

## A.9 Class `corrcoefs_db`

### A.9.1 Constructor `corrcoefs_db/corrcoefs_db`

**Summary:** A database of correlation coefficients generated from a column of another database.

**Usage:**

```
a_coef_db = corrcoefs_db(col_name, coefs, coef_names, pages, id, props)
```

**Description:** This is a subclass of `tests_3d_db`. Allows generating a plot, etc.

**Parameters:**

`col_name`: The column with which the others are correlated.

`coefs`: Matrix where each column has another coefficient.

`coef_names`: Cell array of column names corresponding to coefficients.

`pages`: Column vector of page indices pointing to the `tests_3d_db`.

`id`: An identifying string.

`props`: A structure with any optional properties.

**Returns a structure object with the following fields:**

`tests_db`.

**See also:** [tests\\_db](#) (p. 255), [plot\\_simple](#) (p. 193), [tests\\_db/histogram](#) (p. 274)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2004/10/06

---

## A.10 Class `current_clamp`

### A.10.1 Constructor `current_clamp/current_clamp`

**Summary:** Current clamp object with current and voltage traces.

**Description:** Subclasses the `voltage_clamp` object that uses the generic trace object to store voltage clamp I, V data. Inherits the common methods defined in `voltage_clamp` and `trace`.

**Parameters:**

`a_vc`: An existing `voltage_clamp` object that actually contains current-clamp data.

**Returns a structure object with the following fields:**

`voltage_clamp`: `voltage_clamp` object.

**See also:** [trace](#) (p. 316), [period](#) (p. 162)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2010/02/05

---

### A.10.2 Method `current_clamp/cip_trace`

**Summary:** Return a `cip_trace` object of the desired current step.

**Usage:**

```
a_ct = cip_trace(a_cc, cip_num, props)
```

**Parameters:**

`a_cc`: A `cip_trace` object.  
`cip_num`: Index of CIP level.  
`props`: A structure with any optional properties.  
`stepNum`: Current step to get results for (default=2).

**Returns:**

`a_ct`: A `cip_trace` object with voltage. `cip_level_pA`: applied current magnitude [pA].

**See also:** [`cip\_trace`](#) (p. 56), [`trace`](#) (p. 316), [`spike\_shape`](#) (p. 215)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2011/02/22

---

### A.10.3 Method `current_clamp/get`

**Summary:** Defines generic attribute retrieval for objects.

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/09/14

---

### A.10.4 Method `current_clamp/getResults`

**Summary:** Extract measurement results from all current steps.

**Usage:**

```
[results props] = getResults(a_cc)
```

**Parameters:**

`a_cc`: A `cip_trace` object.  
`props`: A structure with any optional properties.  
`stepNum`: Current step to get results for (default=2).

**Returns:**

`results`: A structure associating test names with result values. `props`: Cell array of `results_profile` objects for each current step.

**See also:** [`cip\_trace`](#) (p. 56), [`trace`](#) (p. 316), [`spike\_shape`](#) (p. 215)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2011/02/22

---

### A.10.5 Method `current_clamp/params_tests_db`

**Summary:** Create a database of measurement results changing with applied current.

**Usage:**

```
a_db = params_tests_db(a_cc, props)
```

**Description:** Selects `cip_level_pA` as the only database parameter.

**Parameters:**

`a_cc`: A `cip_trace` object.

`props`: A structure with any optional properties.

`stepNum`: Current period to get results for. Choose 1 for the initial period, 2 for the pulse period (default) and so on).

`paramsStruct`: Contains parameter names and values that are constant for these traces.

`paramsVary`: Contains parameter names and their varying values for each of these traces in a structure array (e.g., `struct('Na', 10, 50, 100)`)

**Returns:**

`a_db`: A `params_tests_db` with results collected from `getResults` `props`: (Optional)  
Cell array of `cip_trace_allspikes_profile` objects for all current steps.

**See also:** [getResults](#) (p. ??), [cip\\_trace](#) (p. 56), [trace](#) (p. 316), [spike\\_shape](#) (p. 215)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2011/02/23

---

### A.10.6 Method `current_clamp/set`

**Summary:** Generic method for setting object attributes.

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/10/08

---

## A.11 Class `dataset_db_bundle`

### A.11.1 Constructor `dataset_db_bundle/dataset_db_bundle`

**Summary:** The dataset and the DB created from it bundled together.

**Usage:**

```
a_bundle = dataset_db_bundle(a_dataset, a_db, a_joined_db, props)
```

**Description:** This class is made to enable operations that require seamless connection between the high-level (joined) DB and the raw data. The raw DB is only required to make a connection to the dataset. Therefore it only needs to contain columns necessary to make this connection (e.g., ItemIndex) and other columns can be discarded to save space. The raw DB corresponds row-to-row to the dataset. The joined DB is a higher-level database where multiple rows from the raw DB is combined into single rows that represent entities (trials, neurons, etc). This is achieved with a function like `mergePages` or `mergeMultipleCIPsInOne`. There may be several steps for this process, which can be specified as a function handle in the `joinDBfunc` property.

**Parameters:**

`a_dataset`: A `params_tests_dataset` object or a subclass.  
`a_db`: The raw `tests_db` object (or a subclass) created from the dataset.  
`a_joined_db`: The processed DB created from the raw DB.  
`props`: A structure with any optional properties.  
`joinDBfunc`: A function(`a_db`) to be called that can generate `a_joined_db` from it.

**Returns a structure object with the following fields:**

`dataset`, `db`, `joined_db`, `props`.

**See also:** [tests\\_db](#) (p. 255), [params\\_tests\\_dataset](#) (p. 131)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2005/12/13

---

### A.11.2 Method `dataset_db_bundle/constrainedMeasuresPreset`

**Summary:** Returns a `dataset_db_bundle` with constrained measures according to chosen preset.

**Usage:**

```
[a_bundle test_names] = constrainedMeasuresPreset(a_bundle, preset, props)
```

**Parameters:**

`a_bundle`: A `dataset_db_bundle` object.  
`preset`: Choose preset measure list (default=1).  
`props`: A structure with any optional properties.

**Returns:**

`a_bundle`: Modified bundle.

**See also:** [physiol\\_bundle/constrainedMeasuresPreset](#) (p. 166)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2006/06/13

---

### A.11.3 Method `dataset_db_bundle/ctFromRows`

**Summary:** Loads a `cip_trace` object from a raw data file in the `a_bundle`.

**Usage:**

```
a_cip_trace = ctFromRows(a_bundle, a_db, cip_levels, props)
```

**Description:** This method is not implemented for the generic `dataset_db_bundle` class. See subclass implementations.

**Parameters:**

**a\_bundle:** A `dataset_db_bundle` object.

**a\_db:** A DB created by the dataset in the `a_bundle` to read the neuron index numbers from.

**cip\_levels:** A column vector of CIP-levels to be loaded.

**props:** A structure with any optional properties.  
(passed to `a_bundle.dataset/cip_trace`)

**Returns:**

**a\_cip\_trace:** One or more `cip_trace` objects that hold the raw data.

**See also:** [model\\_ct\\_bundle/ctFromRows](#) (p. 109), [physiol\\_bundle/ctFromRows](#) (p. 166)

**Author:** Cengiz Gunay {cgunay@emory.edu}, 2006/10/11

---

### A.11.4 Method `dataset_db_bundle/display`

**Author:** Cengiz Gunay {cgunay@emory.edu}, 2004/08/04

---

### A.11.5 Method `dataset_db_bundle/get`

**Summary:** Defines generic attribute retrieval for objects.

**Author:** Cengiz Gunay {cgunay@emory.edu}, 2004/09/14

---

#### A.11.6 Method `dataset_db_bundle/getNeuronRowIndex`

**Summary:** Returns the neuron index from bundle.

**Usage:**

```
a_row_index = getNeuronRowIndex(a_bundle, an_index, props)
```

**Description:** This is a polymorphic method. Therefore it is not defined for this class, but see subclasses of `dataset_db_bundle` for its more meaningful implementations.

**Parameters:**

**a\_bundle:** A `dataset_db_bundle` subclass object.

**an\_index:** An index number of neuron, or a DB row containing this.

**props:** A structure with any optional properties.

**Returns:**

**a\_row\_index:** A row index of neuron in `a_bundle.joined_db`.

**Example:**

```
>> displayRows(mbundle.joined_db(getNeuronRowIndex(mbundle, 98364), :))
```

**See also:** [dataset\\_db\\_bundle](#) (p. 85)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2006/06/09

---

#### A.11.7 Method `dataset_db_bundle/matchingRow`

**Summary:** Creates a criterion database for matching the tests of a row.

**Usage:**

```
crit_db = matchingRow(a_bundle, row, props)
```

**Description:** Copies selected test values from row as the first row into the criterion db. Adds a second row for the STD of each column in the db.

**Parameters:**

**a\_bundle:** A `tests_db` object.

**row:** A row index to match.

**props:** A structure with any optional properties.

**distDB:** Take the standard deviation from this db instead.

**Returns:**

**crit\_db:** A `tests_db` with two rows for values and STDs.

### Example:

physiol\_bundle has an overloaded matchingRow method that takes the TracesetIndex as argument:  
>> crit\_db = matchingRow(pbundle, 61)

**See also:** [rankMatching](#) (p. ??), [tests\\_db](#) (p. 255), [tests2cols](#) (p. ??)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2005/12/21

---

### A.11.8 Method dataset\_db.bundle/plotfICurve

**Summary:** Generates a f-I curve doc\_plot for neuron at given an\_index in a\_bundle.

#### Usage:

```
a_plot = plotfICurve(a_bundle, trial_num, props)
```

#### Parameters:

**a\_bundle:** A dataset\_db.bundle object.  
**an\_index:** An index with which to address the a\_bundle.  
**props:** A structure with any optional properties.  
    **shortCaption:** This appears in the figure caption.  
    **plotMStats:** If set, add the a\_bundle stats plot.  
    **captionToStats:** Use this as its legend label.  
    **quiet:** if given, no title is produced  
            (passed to plot\_superpose)

#### Returns:

a\_plot: A plot\_superpose that contains a f-I curve plot.

### Example:

```
>> a_p = plotfICurve(r, 1);  
>> plotFigure(a_p, 'The f-I curve of best matching model');
```

**See also:** [plot\\_abstract](#) (p. 180), [plot\\_superpose](#) (p. 196)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2006/01/16

---

**A.11.9 Method** `dataset_db_bundle/profileFromRows`

**Summary:** Loads a `cip_trace` object from a raw data file in the `a_bundle`.

**Usage:**

```
a_prof = profileFromRows(a_bundle, indices, props)
```

**Parameters:**

`a_bundle`: A `dataset_db_bundle` object.

`indices`: Array of `trial/ItemIndex` numbers, or a `db` that contains rows of them.

`props`: A structure with any optional properties.

`indexName`: Column to take the `ItemIndex` from.  
(passed to `params_tests_dataset/loadItemProfile`)

**Returns:**

`a_prof`: One or more `results_profile` objects.

**See also:** [params\\_tests\\_dataset/loadItemProfile](#) (p. 134)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2014/06/19

---

**A.11.10 Method** `dataset_db_bundle/rankingReportTeX`

**Summary:** Generates a report by comparing `a_bundle` with the given match criteria, `crit_db` from `crit_bundle`.

**Usage:**

```
tex_string = rankingReportTeX(a_bundle, crit_bundle, crit_db, props)
```

**Description:** Generates a LaTeX document with: - (optional) Raw traces compared with some best matches at different distances - Values of some top matching `a_db` rows and match errors in a floating table. - colored-plot of measure errors for some top matches. - Parameter distributions of 50 best matches as a bar graph.

**Parameters:**

`a_bundle`: A `dataset_db_bundle` object that contains the DB to compare rows from.

`crit_bundle`: A `dataset_db_bundle` object that contains the criterion dataset.

`crit_db`: A `tests_db` object holding the match criterion tests and STDs which can be created with `matchingRow`.

`props`: A structure with any optional properties.

`caption`: Identification of the criterion db (not needed/used?).

**num\_matches:** Number of best matches to display (default=10).  
**rotate:** Rotation angle for best matches table (default=90).

**Returns:**

tex\_string: LaTeX document string.

**See also:** `displayRowsTeX` (p. ??)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2005/12/13

---

**A.11.11 Method** `dataset_db.bundle/reportNeuron`

**Summary:** Generates a report of neuron at given `an_index` of `a_bundle`.

**Usage:**

```
a_doc = reportNeuron(a_bundle, an_index, props)
```

**Description:** Generates a report document with preset layouts of annotated plots of the selected neuron. See `reportLayout` below for presets.

**Parameters:**

**a\_bundle:** a `dataset_db.bundle` object which contains the neuron

**an\_index:** The index to pass to `ctFromRows` method of `a_bundle`.

**props:** A structure with any optional properties.

**reportLayout:** Allows choosing one of predefined report types (strings):

- 1: Only +/- 100 pA traces in one plot (default).  
     1a/b: Either one of the +/- 100 pA traces in one plot.
- 2: Only +/- 100 pA traces and spike shapes in one horiz. plot.
- 2a: +/- 100 pA traces, f-I curve and spike shapes in one horiz. plot.
- 3: +100 pA raw trace and rate profile stacked vertically.
- 3b: -100 pA raw trace and rate profile stacked vertically.
- 4: Horiz stack of +/- 100 pA raw trace with rate profiles underneath.
- 5: 5-piece trace, spike shape, f-I curve, f-t curve quad-plot.

**numTraces:** Limit number of traces to show in plot ( $i=1$ ).

**traces:** List of acceptable traces to load.

**traceAxisLimits:** If given, use these limits for trace plots.

**rateAxisLimits:** If given, use these limits for rate plots.

**fIAxisLimits:** If given, use these limits for fI curve plots.

**fIstats:** Add a fI-stats plot in addition to the curve.

**sshapeAxisLimits:** If given, use these limits for spike shape plots.

**sshapeResults:** If 1, plot measures on the spike shape (default=1).

**Returns:**

a\_doc: A doc\_generate object, or a subclass, that can be plotted, or printed as a PS or PDF file.

**Example:**

```
>> printTeXFile(reportNeuron(mbundle, 2222), 'a.tex')
or:
>> plotFigure(get(reportNeuron(mbundle, 2222), 'plot'))
or if the result is one or many doc_plot objects:
>> plot(reportNeuron(mbundle, 2222:2224, struct('reportLayout', '5')))
```

**See also:** [doc\\_multi](#) (p. 96), [doc\\_generate](#) (p. 93), [doc\\_generate/printTeXFile](#) (p. 95)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2006/01/24

---

### A.11.12 Method dataset\_db.bundle/set

**Summary:** Generic method for setting object attributes.

**Author:** Cengiz Gunay jcgunay@emory.edu, 2004/10/08

---

### A.11.13 Method dataset\_db.bundle/simNewParams

**Summary:** Simulates new parameter set and adds it to dataset and DB.

**Usage:**

```
[a_bundle, a_new_db, a_new_joined_db] = simNewParams(a_bundle, a_param_row_db, props)
```

**Parameters:**

a\_bundle: A dataset\_db.bundle object.

a\_db: Rows with new parameters.

props: A structure with any optional properties.

simFunc: Handle to function to call for simulating the parameter row db (e.g., @(row\_db)).

trial: Trial number for new parameter set. It also indicates parallel mode, which does not alter existing files, but instead creates new files with this trial number suffix.

writePar: If 1, create a new par file (default=0).

**Returns:**

a\_bundle: The bundle with updated parameters and measures. a\_new\_db: Newly created rows. a\_new\_joined\_db: Newly created rows joined.

**See also:** [params\\_tests\\_dataset/loadItemProfile](#) (p. 134)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2014/06/23

---

#### A.11.14 Method `dataset_db.bundle/subsasgn`

**Summary:** Defines generic index-based assignment for objects.

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2006/02/06

---

#### A.11.15 Method `dataset_db.bundle/subsref`

**Summary:** Defines indexing for `tests_db` objects for `()` and `.` operations.

**Usage:**

```
obj = obj(rows, tests) obj = obj.attribute
```

**Description:** Returns attributes or selects the given test columns and rows and returns in a new `tests_db` object.

**Parameters:**

`obj`: A `tests_db` object.

`rows`: A logical or index vector of rows. If `':'`, all rows.

`tests`: Cell array of test names or column indices. If `':'`, all tests.

`attribute`: A `tests_db` class attribute.

**Returns:**

`obj`: The new `tests_db` object.

**See also:** [subsref](#) (p. ??), [tests\\_db](#) (p. 255)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/09/17

---

### A.12 Class `doc_generate`

#### A.12.1 Constructor `doc_generate/doc_generate`

**Summary:** Generic class to help generate printed or annotated documents with results.

**Usage:**

```
a_doc = doc_generate(text_string, id, props)
```

**Description:** This constitutes the base class for other `doc_` classes. For convenience, this class holds a `text_string` to be printed when the document is generated with the `printTeXFile` option.

**Parameters:**

`text_string`: Contents of this document.  
`id`: An identifying string.  
`props`: A structure with any optional properties.

**Returns a structure object with the following fields:**

`text`, `id`, `props`.

**See also:** `doc_plot` (p. 97), `doc_multi` (p. 96)

**Author:** Cengiz Gunay `jcgunay@emory.edu`, 2006/01/17

---

### A.12.2 Method `doc_generate/display`

**Author:** Cengiz Gunay `jcgunay@emory.edu`, 2004/08/04

---

### A.12.3 Method `doc_generate/get`

**Summary:** Defines generic attribute retrieval for objects.

**Author:** Cengiz Gunay `jcgunay@emory.edu`, 2004/09/14

---

### A.12.4 Method `doc_generate/getTeXString`

**Summary:** Returns the TeX representation for the document.

**Usage:**

```
tex_string = getTeXString(a_doc, props)
```

**Description:** This is an abstract placeholder for this method. It specifies what this method should do in the subclasses that implement it. This method should create all the auxiliary files needed by the document. The generated `tex_string` should be ready to be visualized.

**Parameters:**

`a_doc`: A `tests_db` object.  
`props`: A structure with any optional properties.

**Returns:**

`tex_string`: A string that contains TeX commands, which upon writing to a file, can be interpreted by the TeX engine to produce a document.

**Example:**

```
doc_plot has an overloaded getTeXString method:  
>> tex_string = getTeXString(a_doc.plot)  
>> string2File(tex_string, 'my_doc.tex')  
then my_doc.tex can be used by including from a valid LaTeX document.
```

**See also:** `doc.generate` (p. 93), `doc.plot` (p. 97)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2006/01/17

---

### A.12.5 Method `doc.generate/printTeXFile`

**Summary:** Creates a TeX file with the contents of this document.

**Usage:**

```
printTeXFile(a_doc, filename, props)
```

**Description:** Calls `getTeXString` to generate the contents. The filename is adjusted with a call to `properFilename` to generate an acceptable TeX filename. TeX-specific should only be added at this point or at `getTeXString`, because before we want the object to be a generic document container.

**Parameters:**

`a_doc`: A `tests.db` object.  
`filename`: To write the TeX string.  
`props`: A structure with any optional properties.  
`docDir`: Directory in which to create TeX file.  
(passed to `getTeXString`)

**Returns:**

`tex_string`: A string that contains TeX commands, which upon writing to a file, can be interpreted by the TeX engine to produce a document.

**Example:**

```
>> a_doc = doc_plot(a_plot, 'Results from cell.', 'Results.', struct, '');  
>> printTeXFile(a_doc, 'my_doc.tex')  
then my_doc.tex can be used by including from a valid LaTeX document.
```

**See also:** `doc.generate` (p. 93), `doc.plot` (p. 97), `string2File` (p. ??), `properFilename` (p. ??)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2006/01/17

---

**A.12.6 Method** `doc_generate/set`

**Summary:** Generic method for setting object attributes.

**Author:** Cengiz Gunay `jcgunay@emory.edu`, 2004/10/08

---

**A.12.7 Method** `doc_generate/subsref`

**Summary:** Defines generic indexing for objects.

---

**A.13 Class** `doc_multi`

**A.13.1 Constructor** `doc_multi/doc_multi`

**Summary:** A document that is composed of multiple other `doc_generate` objects.

**Usage:**

```
a_doc = doc_multi(docs, id, props)
```

**Parameters:**

**docs:** A vector of `doc_generate` objects.

**id:** An identifying string.

**props:** A structure with any optional properties.

**Returns a structure object with the following fields:**

`docs`, `doc_generate`.

**Example:**

```
>> mydoc = doc_multi([doc_plot(a_plot1), doc_plot(a_plot2)], 'Two plots')
>> printTeXFile(mydoc, 'two-plots.tex')
```

**See also:** [doc\\_generate](#) (p. 93), [getTeXString](#) (p. ??), [doc\\_generate/printTeXFile](#) (p. 95)

**Author:** Cengiz Gunay `jcgunay@emory.edu`, 2006/01/17

---

**A.13.2 Method** `doc_multi/get`

**Summary:** Defines generic attribute retrieval for objects.

**Author:** Cengiz Gunay `jcgunay@emory.edu`, 2004/09/14

---

### A.13.3 Method `doc_multi/getTeXString`

**Summary:** Returns the TeX representation for the document.

**Usage:**

```
tex_string = getTeXString(a_doc, props)
```

**Description:** Concatenates TeX representations of `doc_generate`, or subclass, objects it contains.

**Parameters:**

`a_doc`: A `tests_db` object.

`props`: A structure with any optional properties.

**Returns:**

`tex_string`: A string that contains TeX commands, which upon writing to a file, can be interpreted by the TeX engine to produce a document.

**Example:**

```
doc_plot has an overloaded getTeXString method:  
>> tex_string = getTeXString(a_doc_plot)  
>> string2File(tex_string, 'my_doc.tex')  
then my_doc.tex can be used by including from a valid LaTeX document.
```

**See also:** [doc\\_generate](#) (p. 93), [doc\\_plot](#) (p. 97)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2006/01/17

---

### A.13.4 Method `doc_multi/set`

**Summary:** Generic method for setting object attributes.

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/10/08

---

## A.14 Class `doc_plot`

### A.14.1 Constructor `doc_plot/doc_plot`

**Summary:** Generates a formatted plot for printing, annotated with captions.

**Usage:**

```
a_doc = doc_plot(a_plot, caption, plot_filename, float_props, id, props)
```

**Description:** The generated file may take an extension according to chosen format.

**Parameters:**

**a\_plot:** A plot abstract ready to be visualized.  
**caption:** Long caption to appear under the figure.  
**plot\_filename:** Filename to be generated from the plot.  
**float\_props:** Formatting instructions passed to TeXfloat.  
**id:** An identifying string.  
**props:** A structure with any optional properties.  
**orient:** Passed to the orient command before printing to figure file.  
(others passed to doc\_plot/getTeXString and TeXfloat)

**Returns a structure object with the following fields:**

plot, caption, plot\_filename, float\_props, doc\_generate.

**Example:**

```
>> a_doc = doc_plot(plotData(my_cip_trace), 'My CIP trace. Very interesting.', ...  
'trace1', struct, 'first doc');  
>> printTeXFile(a_doc, 'my_doc.tex');
```

**See also:** [doc\\_generate](#) (p. 93), [TeXfloat](#) (p. ??)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2006/01/17

---

### A.14.2 Method doc\_plot/get

**Summary:** Defines generic attribute retrieval for objects.

**Author:** Cengiz Gunay jcgunay@emory.edu, 2004/09/14

---

### A.14.3 Method doc\_plot/getTeXString

**Summary:** Returns the TeX representation for the plot document.

**Usage:**

```
tex_string = getTeXString(a_doc, props)
```

**Description:** Plots, prints EPS files and generates the necessary LaTeX code.

**Parameters:**

**a\_doc:** A doc\_plot object.  
**props:** A structure with any optional properties.  
**docDir:** Base directory for files.  
**plotRelDir:** Subdirectory for plot files. \input commands will  
include this directory. (passed to TeXfloat)

**Returns:**

`tex_string`: A string that contains TeX commands, which upon writing to a file, can be interpreted by the TeX engine to produce a document.

**Example:**

```
doc_plot has an overloaded getTeXString method:  
>> tex_string = getTeXString(a.doc_plot)  
>> string2File(tex_string, 'my_doc.tex')  
then my_doc.tex can be used by including from a valid LaTeX document.
```

**See also:** [doc.generate](#) (p. 93), [doc\\_plot](#) (p. 97)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2006/01/17

---

### A.14.4 Method `doc_plot/plot`

**Summary:** Default plot method to preview the contained plot in a new figure.

**Usage:**

```
figure_handle = plot(a_doc, props)
```

**Description:** Only generate the contained plot for previewing. Opens a new figure.

**Parameters:**

`a_doc`: A `doc_plot` object.

`props`: A structure with any optional properties.

**Returns:**

`figure_handle`: Handle of newly opened figure.

**Example:**

```
>> figure_handle = plot(a.doc_plot)
```

**See also:** [plot\\_abstract/plotFigure](#) (p. 185), [doc.generate](#) (p. 93), [doc\\_plot](#) (p. 97)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2006/01/17

---

### A.14.5 Method `doc_plot/plot_abstract`

**Summary:** Returns the `plot_abstract` object within the `doc_plot`.

**Usage:**

```
a_plot = plot_abstract(a_doc, title_str, props)
```

**Description:** If `a_doc` is a vector, returns a vector of `plot_abstract` objects.

**Parameters:**

`a_doc`: A `doc_plot` object.

`title_str`: (Optional) String to replace plot title.

`props`: A structure with any optional properties.  
(rest passed to `plot_abstract`.)

**Returns:**

`a_plot`: A `plot_abstract` object or vector that can be visualized.

**See also:** [doc\\_plot/plot](#) (p. 99), [plot\\_abstract](#) (p. 180)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/11/17

---

### A.14.6 Method `doc_plot/set`

**Summary:** Generic method for setting object attributes.

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/10/08

---

## A.15 Class `histogram_db`

### A.15.1 Constructor `histogram_db/histogram_db`

**Summary:** A database of histogram values generated for a column of another database.

**Usage:**

```
a_hist_db = histogram_db(col_name, bins, hist_results, id, props)
```

**Description:** This is a subclass of `tests_db`. Allows generating a histogram plot, etc.  
The histogram count is entered as a column named `histVal`.

**Parameters:**

`col_name`: The column name of the histogrammed value.

`bins`: The values for which the histogram values are calculated.

`hist_results`: A column vector of histogram values.

**id:** An identifying string.

**props:** A structure with any optional properties.

**Returns a structure object with the following fields:**

tests\_db, props.

**Example:**

```
>> [hist_results, bins] = hist(my_data);  
>> a_hist_db = histogram_db('firing_rate', bins, hist_results, 'rate histogram db');  
>> plot(a_hist_db);
```

**See also:** [tests\\_db](#) (p. 255), [plot\\_simple](#) (p. 193), [tests\\_db/histogram](#) (p. 274)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2004/09/20

---

### A.15.2 Method `histogram_db/calcKLhist`

**Summary:** Calculates the Kullback-Leibler divergence between two histograms with same bins.

**Usage:**

```
kl_bits = calcKLhist(two_hist_dbs, props)
```

**Description:** Histograms must have same bins! See example how to use `tests_db/histogram` to get same bins from multiple DBs.

**Parameters:**

**two\_hist\_dbs:** Array of two `histogram_db` objects to calculate KL divergence.

**props:** Structure with optional parameters.

**sym:** calculate symmetric KL divergence. Can be 'sum' for sum of divergences, 'avg' for average, and 'res' for resistor average.

**Returns:**

kl\_bits: The calculated non-negative divergence in bits.

**Example:**

```
>> kl_bits = calcKLhist(histogram([one_db, another_db], 'var1', 100))
```

**See also:** [histogram\\_db](#) (p. 100), [calcKLmodel](#) (p. ??), [tests\\_db/histogram](#) (p. 274)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2009/04/03

---

### A.15.3 Method `histogram_db/calcKLmodel`

**Summary:** Calculates the Kullback-Leibler divergence of the histogram to a model distribution.

**Usage:**

```
[mode_val, mode_mag] = calcKLmodel(a_hist_db)
```

**Parameters:**

`a_hist_db`: A `histogram_db` object.

`dist_model`: Structure that contains the distribution parameters. Must be one of these:

- Normal distribution: `struct('dist', 'norm', 'mu', mean, 'sigma', var)`
- Poisson distribution: `struct('dist', 'pois', 'lambda', l)`
- Exponential distribution: `struct('dist', 'exp', 'mu', m)`
- Uniform distribution: `struct('dist', 'uni')`

`props`: Structure with optional parameters.

`plot`: If 1, return a `plot_abstract` object with both distributions.

**Returns:**

`kl.bits`: The calculated divergence in bits.

**See also:** [histogram\\_db](#) (p. 100)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2009/03/24

---

### A.15.4 Method `histogram_db/calcMode`

**Summary:** Finds the mode of the distribution, that is, the bin with the highest value.

**Usage:**

```
[mode_val, mode_mag] = calcMode(a_hist_db)
```

**Parameters:**

`a_hist_db`: A `histogram_db` object.

**Returns:**

`mode_val`: The center of the bin that has most members. `mode_mag`: The value of the histogram bin.

**See also:** [histogram\\_db](#) (p. 100)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2005/04/27

---

#### A.15.5 Method `histogram_db/get`

**Summary:** Defines generic attribute retrieval for objects.

**Author:** Cengiz Gunay `ıcgunay@emory.edu`, 2004/09/14

---

#### A.15.6 Method `histogram_db/plotEqSpaced`

**Summary:** Generates a histogram plot where the values are equally spaced on the x-axis. For use with non-linear parameter values.

**Usage:**

```
a_plot = plotEqSpaced(a_hist_db, title_str, props)
```

**Description:** Generates a `plot_simple` object from this histogram.

**Parameters:**

`a_hist_db`: A `histogram_db` object.

`title_str`: Optional title string.

`props`: Optional properties passed to `plot_abstract`.

`quiet`: If 1, don't include database name on title.

`skipXnum`: Skip every this many values to fit labels on X-axis (default=1).

`totalXnum`: Skip to fit this number of total X-axis tick labels.

**Returns:**

`a_plot`: A object of `plot_abstract` or one of its subclasses.

**See also:** [plot\\_abstract](#) (p. 180), [plot\\_simple](#) (p. 193)

**Author:** Cengiz Gunay `ıcgunay@emory.edu`, 2004/09/22

---

#### A.15.7 Method `histogram_db/plotPages`

**Summary:** Generates a plot containing subplots from each page of histograms.

**Usage:**

```
a_plot = plotPages(a_hist_db, title_str, props)
```

**Description:** For each page of the histogram, a histogram is placed in a subplot.

**Parameters:**

`a_hist_db`: A `histogram_db` object.

`title_str`: (Optional) String to append to plot title.

**props:** A structure with any optional properties, passed to `plot_stack`.

**an\_orient:** Stack orientation. One of 'x', or 'y' (Default='y'; vertical).

**quiet:** If 1, only display given `title_str`.

**Returns:**

`a_plot`: A object of `plot_abstract` or one of its subclasses.

**See also:** `plotPages` (p. ??), `plot_simple` (p. 193)

**Author:** Cengiz Gunay `jcgunay@emory.edu`, 2004/10/04

---

**A.15.8 Method** `histogram_db/plotRowMatrix`

**Summary:** Generates a subplot matrix of measure columns versus rows of databases.

**Usage:**

```
a_plot = plotRowMatrix(hist_dbs, title_str, props)
```

**Description:** Each row in the `hist_dbs` is assumed to come from a different DB. Columns represent histograms of different measurements. The plot is made such that histograms in each row have the same maximal count, and histograms in each column have the same axis limits.

**Parameters:**

**hist\_dbs:** A matrix of `histogram_db` objects.

**title\_str:** Title to go at the top.

**props:** A structure with any optional properties.

**rowLabels:** Cell array of y-axis labels for each row.  
(rest passed to `histogram_db/plot_abstract`)

**Returns:**

`a_plot`: A object of `plot_abstract` or one of its subclasses.

**See also:** `plot_abstract` (p. 180)

**Author:** Cengiz Gunay `jcgunay@emory.edu`, 2006/11/22

---

#### A.15.9 Method `histogram_db/plot_abstract`

**Summary:** Creates a bar plot from the histogram.

**Usage:**

```
a_plot = plot_abstract(a_hist_db, title_str, props)
```

**Description:** Generates a `plot_simple` object from this histogram.

**Parameters:**

`a_hist_db`: A `histogram_db` object.

`title_str`: Optional title string.

`props`: Optional properties passed to `plot_abstract`.

`command`: Plot command (Optional, default='bar')

`endZeros`: Prefix and suffix bins with zero values to make a smooth plot.

`lineSpec`: Line specification passed to bar command.

`logScale`: If 1, use logarithmic y-scale.

`shading`: 'faceted' (default) or 'flat'.

`barWidth`: Controls spacing between bars (see width argument for the bar command; default=0.8).

`quiet`: If 1, don't include database name on title.

**Returns:**

`a_plot`: A object of `plot_abstract` or one of its subclasses.

**See also:** [plot\\_abstract](#) (p. 180), [plot\\_simple](#) (p. 193)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2004/09/22

---

#### A.15.10 Method `histogram_db/subsref`

**Summary:** Defines generic indexing for objects.

---

### A.16 Class `mesh_amira`

#### A.16.1 Constructor `mesh_amira/mesh_amira`

**Summary:** Contains 3D mesh data imported from the Amira software.

**Usage:**

```
a_mesh = mesh_amira(filename, id, props)
```

**Description:** By default it reads an ASCII formatted v2 type Amira file and expects only vertex and edge information for representing 3D reconstructions of neurons.

**Parameters:**

**filename:** Amira mesh file (\*.am).  
**id:** Identification string.  
**props:** A structure with any optional properties.  
**isVerbose:** If 1, produce verbose info while loading Amira file (for debugging).

**Returns a structure object with the following fields:**

**nVertices, nEdges, nOrigins:** Number of vertices, edges and origins, resp., **vertices:** 3D coordinates of each vertex, **neighborCount:** Number of neighbors for each vertex, **raddi:** Radius of each vertex, **neighborList:** Index of vertices that are neighboring to each vertex, **Origins:** Indices of vertices marked as 'origin', **origFilename, id, props**

**See also:** [private/loadAmiraMesh](#) (p. ??)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2012/02/03

---

### A.16.2 Method `mesh_amira/exportMorphML`

**Summary:** Export mesh to MorphML XML format.

**Usage:**

```
a_dom = exportMorphML(a_mesh, props)
```

**Parameters:**

**a\_mesh:** A `mesh_amira` object.  
**props:** A structure with any optional properties.

**Returns:**

**a\_dom:** A Matlab `DomNode` object.

**Example:**

```
>> a_mesh = mesh_amira('my_amira.am', 'Neuron 1')  
>> xmlwrite('neuron.xml', exportMorphML(a_mesh))
```

**See also:**

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2012/02/03

---

### A.16.3 Method `mesh_amira/plot_abstract`

**Summary:** Prepare a plot the of the 3D mesh.

**Usage:**

```
a_p = plot_abstract(a_mesh, title_str, props)
```

**Description:** Can be stacked or superposed with other plot objects.

**Parameters:**

`a_mesh`: A voltage clamp object.

`title_str`: (Optional) Text to appear in the plot title.

`props`: A structure with any optional properties.

`quiet`: If 1, only use given `title_str`.

**Returns:**

`a_p`: A `plot_abstract` object.

**Example:**

```
>> a_mesh = mesh_amira('my_amira.am', 'Neuron 1')
>> plotFigure(plot_abstract(a_mesh, ' - side view'))
```

**See also:** [plotFigure](#) (p. ??), [plot\\_superpose](#) (p. 196), [plot\\_stack](#) (p. 194)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2012/02/03

---

## A.17 Class `model_ct_bundle`

### A.17.1 Constructor `model_ct_bundle/model_ct_bundle`

**Summary:** The model `cip_trace` dataset and the DB created from it bundled together.

**Usage:**

```
a_bundle = model_ct_bundle(a_dataset, a_db, a_joined_db, props)
```

**Description:** This is a subclass of `dataset_db_bundle`, specialized for model datasets.

**Parameters:**

`a_dataset`: A `params_cip_trace_fileset` object.

`a_db`: The raw `params_tests_db` object created from the dataset. It only needs to have the `pAcip`, `trial`, and `ItemIndex` columns.

`a_joined_db`: The one-model-per-line DB created from the raw DB.

`props`: A structure with any optional properties.

**Returns a structure object with the following fields:**

dataset\_db\_bundle.

**Example:**

```
>> a_joined_db = mergeMultipleCIPsInOne(a_db, ...)
>> a_bundle = model_ct_bundle(a_params_cip_trace_fileset, a_db, a_joined_db)
```

**See also:** [dataset\\_db\\_bundle](#) (p. 85), [tests\\_db](#) (p. 255), [params\\_tests\\_dataset](#) (p. 131), [params\\_tests\\_db/mergeMultipleCIPsInOne](#) (p. 146)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2005/12/13

---

### A.17.2 Method `model_ct_bundle/addToDB`

**Summary:** Concatenate to existing DB in the bundle.

**Usage:**

```
a_bundle = addToDB(a_bundle, a_raw_db, props)
```

**Description:** If joinedDb is not given in props, calls `treatSimDB` to get the joined\_db from this raw DB. Then concats to both db and joined\_db in bundle.

**Parameters:**

**a\_bundle:** A `model_ct_bundle` object.

**a\_crit\_bundle:** A `physiol_bundle` having a `crit_db` as its `joined_db`.

**props:** A structure with any optional properties.

**joinedDb:** The joined version of `a_raw_db`.

**dataset:** If given, this one is used to replace the fileset in the bundle.

**Returns:**

**a\_bundle:** a `model_ct_bundle` object containing the added DB.

**Example:**

```
>> mbundle = addToDB(mbundle, params_tests_db(mfileset, [19684:59956]))
```

**See also:** [params\\_tests\\_fileset/addFiles](#) (p. 158), [multi\\_fileset\\_gpsim\\_cns2005/addFileDir](#) (p. ??)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2006/02/06

---

### A.17.3 Method `model_ct_bundle/collectPhysiolMatches`

**Summary:** Compare model DB to given physiol criteria and return some top matches.

**Usage:**

```
row_index = collectPhysiolMatches(a_bundle, a_crit_bundle, props)
```

**Parameters:**

`a_bundle`: A `model_ct_bundle` object.

`a_crit_bundle`: A `physiol_bundle` object that holds the criterion neuron.

`props`: A structure with any optional properties.

`showTopmost`: Number of top matching models to return (default=50)

**Returns:**

`row_index`: Row indices of best matching models.

**See also:**

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2006/01/18

---

### A.17.4 Method `model_ct_bundle/ctFromRows`

**Summary:** Loads a `cip_trace` object from a raw data file in the `a_bundle`.

**Usage:**

```
a_cip_trace = ctFromRows(a_bundle, a_db|trials, cip_levels, props)
```

**Description:** This is an overloaded method.

**Parameters:**

`a_bundle`: A `model_ct_bundle` object.

`a_db`: A DB created by the dataset in the `a_bundle` to read the trial numbers from.

`trials`: A column vector with trial numbers.

`cip_levels`: A column vector of CIP-levels to be loaded.

`props`: A structure with any optional properties.  
(passed to `a_bundle.dataset/cip_trace`)

**Returns:**

`a_cip_trace`: One or more `cip_trace` objects that hold the raw data.

**See also:** [params\\_cip\\_trace\\_fileset/ctFromRows](#) (p. 129)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2005/07/13

---

**A.17.5 Method** `model_ct_bundle/get`

**Summary:** Defines generic attribute retrieval for objects.

**Author:** Cengiz Gunay `jcgunay@emory.edu`, 2004/09/14

---

**A.17.6 Method** `model_ct_bundle/getNeuronLabel`

**Summary:** Constructs the neuron label from bundle.

**Usage:**

```
a_label = getNeuronLabel(a_bundle, trial_num, props)
```

**Parameters:**

**a\_bundle:** A `physiol_cip_traceset_fileset` object.

**trial\_num:** The trial number of model neuron.

**props:** A structure with any optional properties.

**Returns:**

**a\_label:** A string label identifying selected neuron in bundle.

**See also:** [dataset\\_db\\_bundle](#) (p. 85)

**Author:** Cengiz Gunay `jcgunay@emory.edu`, 2006/05/26

---

**A.17.7 Method** `model_ct_bundle/getNeuronRowIndex`

**Summary:** Returns the neuron index from bundle.

**Usage:**

```
a_row_index = getNeuronRowIndex(a_bundle, trial_num, props)
```

**Parameters:**

**a\_bundle:** A `model_ct_bundle` object.

**trial\_num:** The trial number of model neuron, or a DB row containing this.

**props:** A structure with any optional properties.

**Returns:**

**a\_row\_index:** A row index of neuron in `a_bundle.joined_db`.

**See also:** [dataset\\_db\\_bundle](#) (p. 85)

**Author:** Cengiz Gunay `jcgunay@emory.edu`, 2006/06/09

---

### A.17.8 Method `model_ct_bundle/getTrialNum`

**Summary:** Extracts identifying neuron trial number from DB.

**Usage:**

```
trial_num = getTrialNum(a_bundle, a_db|trial_num, props)
```

**Parameters:**

**a\_bundle:** A `physiol_cip_traceset_fileset` object.

**a\_db:** DB rows representing desired model neuron(s).

**trial\_num:** Trial numbers. If specified, this function does nothing but return them.

**props:** A structure with any optional properties.

**Returns:**

**trial\_num:** The trial number(s) identifying selected neuron(s) in bundle.

**See also:** [dataset\\_db\\_bundle](#) (p. 85)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2006/05/26

---

### A.17.9 Method `model_ct_bundle/plotComparefICurve`

**Summary:** Generates a f-I curve doc\_plot comparing `m_trial` and `to_index`.

**Usage:**

```
a_plot = plotComparefICurve(m_bundle, m_trial, to_bundle, to_index, props)
```

**Description:** Note that this is not a general method. `to_bundle` should have been able to accept any type of bundle. Most probably this method is redundant and deprecated.

**Parameters:**

**m\_bundle:** A `model_ct_bundle` object.

**m\_trial:** Trial number of model.

**to\_bundle:** A `physiol_bundle` object.

**to\_index:** `TracesetIndex` of neuron.

**props:** A structure with any optional properties.

**shortCaption:** This appears in the figure caption.

**plotMStats:** If set, add the `m_bundle` stats plot.

**plotToStats:** If set, add the `to_bundle` stats plot.

**captionToStats:** Use this as its legend label.

**quiet:** if given, no title is produced  
(passed to `plot_superpose`)

**Returns:**

`a_plot`: A `plot_superpose` that contains a f-I curve plot.

**Example:**

```
>> a_p = plotComparefICurve(r, 1);  
>> plotFigure(a_p, 'The f-I curve of best matching model');
```

**See also:** [plot\\_abstract](#) (p. 180), [plot\\_superpose](#) (p. 196)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2006/01/16

---

### A.17.10 Method `model_ct_bundle/plotCompareRanks`

**Summary:** Generates a plots of given ranks from the `ranked_bundle`.

**Usage:**

```
plots = plotCompareRanks(m_bundle, p_bundle, a_ranked_db, ranks, props)
```

**Parameters:**

**m\_bundle:** A `model_ct_bundle` object.  
**p\_bundle:** A `dataset_db_bundle` object that originated the criterion.  
**a\_ranked\_db:** A `ranked_db` generated from ranking `m_bundle`.  
**ranks:** Vector of rank indices for which to generate the plots.  
**props:** A structure with any optional properties.

**Returns:**

`plots`: A structure that contains the `joined_db`, and the plot vectors `trace_d100_plots` and `trace_h100_plots`.

**Example:**

```
>> plots = plotCompareRanks(r, 1:10);  
>> plotFigure(plots.trace_d100_plots(1), 'The best matching +100 pA CIP trace');
```

**See also:**

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2006/01/16

---

### A.17.11 Method `model_ct_bundle/rankMatching`

**Summary:** Create a `ranked_db` from given criterion db.

**Usage:**

```
a_ranked_db = rankMatching(a_bundle, a_crit_db, props)
```

**Parameters:**

**a\_bundle:** A `model_ct_bundle` object.  
**a\_crit\_db:** A `crit_db` created by a `matchingRow` method.  
**props:** A structure with any optional properties.  
(passed to `tests_db/rankMatching`)

**Returns:**

**a\_ranked\_db:** a `ranked_db` object containing the rankings.

**See also:** [tests\\_db/rankMatching](#) (p. 299), [ranked\\_db](#) (p. 200)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2006/01/18

---

### A.17.12 Method `model_ct_bundle/reportCompareModelToPhysiolNeuron`

**Summary:** Generates a report by comparing given model neuron to given `physiol` neuron.

**Usage:**

```
a_doc_multi = reportCompareModelToPhysiolNeuron(m_bundle, trial_num, p_bundle, traceset_index, props)
```

**Description:** Generates a report document with: - Figure displaying raw traces of the `physiol` neuron compared with the model neuron - Figure comparing f-I curves of the two neurons. - Figure comparing spont and pulse spike shapes of the two neurons.

**Parameters:**

**m\_bundle, p\_bundle:** `dataset_db_bundle` objects of the model and physiology neurons.  
**trial\_num:** Trial number of desired model neuron in `m_bundle`.  
**traceset\_index:** `TracesetIndex` of desired neuron in `p_bundle`.  
**props:** A structure with any optional properties.  
**horizRow:** If defined, create a row-figure with all plots.  
**numPhysTraces:** Number of physiology traces to show in plot ( $i=1$ ).

**Returns:**

a\_doc\_multi: A doc\_multi object that can be printed as a PS or PDF file.

**Example:**

```
>> printTeXFile(reportCompareModelToPhysiolNeuron(mbundle, 2222, pbundle, 34), 'a.tex')
```

**See also:** [doc\\_multi](#) (p. 96), [doc\\_generate](#) (p. 93), [doc\\_generate/printTeXFile](#) (p. 95)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2006/01/24

---

**A.17.13 Method** model\_ct\_bundle/reportRankingToPhysiolNeuronsTeXFile

**Summary:** Compare model DB to given physiol criterion and create a report.

**Usage:**

```
tex_filename = reportRankingToPhysiolNeuronsTeXFile(m_bundle, p_bundle, a_crit_db, props)
```

**Description:** A LaTeX report is generated following the example in physiol\_bundle/matchingRow. The filename contains the neuron name, followed by the traceset index as an identifier of pharmacological applications, as in gpd0421c\_s34.

**Parameters:**

m\_bundle: A model\_ct\_bundle object.  
p\_bundle: A physiol\_bundle object.  
a\_crit\_db: The criterion neuron chosen with a matchingRow method.  
props: A structure with any optional properties.  
filenameSuffix: Append this identifier to the TeX filename.  
(others passed to rankMatching)

**Returns:**

tex\_filename: Name of LaTeX file generated.

**See also:** [tests\\_db/rankMatching](#) (p. 299), [physiol\\_cip\\_traceset/cip\\_trace](#) (p. 172), [physiol\\_bundle/matchingRow](#) (p. 168)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2006/01/18

---

**A.17.14 Method** model\_ct\_bundle/set

**Summary:** Generic method for setting object attributes.

**Author:** Cengiz Gunay jcgunay@emory.edu, 2004/10/08

---

## A.18 Class `model_data_vcs`

### A.18.1 Constructor `model_data_vcs/model_data_vcs`

**Summary:** Combines model description that fits a voltage clamp data.

**Usage:**

```
a_md = model_data_vcs(model_f, data_vc, id, props)
```

**Description:** For tasks such as plotting comparison of model to data and generating initial fits for model. Can also have a GUI here for fitting.

**Parameters:**

**model\_f:** Model as a param\_func object or a NeuroFit file name.

Make sure to specify required param.LNeurofit props below.

**data\_vc:** Data as a voltage\_clamp object directly or in a MAT file or from an ABF file.

**id:** Identification string.

**props:** A structure with any optional properties.

**Returns a structure object with the following fields:**

**model\_f, data\_vc, model\_vc:** Obtained by simulating model.

**See also:** [voltage\\_clamp](#) (p. 337), [param\\_func](#) (p. ??)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2010/10/11

---

### A.18.2 Method `model_data_vcs/convertTauFromSpline`

**Summary:** Converts m and h tau functions from spline to Hodgkin-Huxley form.

**Usage:**

```
a_md = convertTauFromSpline(a_md, props)
```

**Parameters:**

**a\_md:** A model\_data\_vcs object.

**props:** A structure with any optional properties.

**vRange:** Voltage values to evaluate spline function (default=-30:60)

**Returns:**

**a\_md:** (updated)

**Example:**

```
>> a_test_md = convertTauFromSpline(a_md)
```

See also: [model\\_data\\_vcs](#) (p. 115), [voltage\\_clamp](#) (p. 337), [plot\\_abstract](#) (p. 180), [plotFigure](#) (p. ??)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2011/05/31

---

### A.18.3 Method `model_data_vcs/display`

**Summary:** Return string representation of object.

**Usage:**

```
str = display(a_md)
```

**Parameters:**

`a_md`: A `model_data_vcs` object.

**Returns:**

`str`: Readable string

See also: [model\\_data\\_vcs](#) (p. 115)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2011/05/31

---

### A.18.4 Method `model_data_vcs/fit`

**Summary:** Fit model to data.

**Usage:**

```
[a_md a_doc] = fit(a_md, title_str, props)
```

**Description:** Caveat: what you see in the plots may be different that what the algorithm is comparing for the fits if you provide `fitRange` or `fitRangeRel` because the plots will simulate the whole range anyway. Therefore the plots will always have a more correct output than the fitting algorithm – especially if you selected a too narrow simulation range that doesn't let the model react to voltage levels.

**Parameters:**

`a_md`: A `model_data_vcs` object.

`props`: A structure with any optional properties.

`fitRange`: Start and end times [ms] of simulated range used for optimization. Note that simulated range must include prior stimulation steps to set state of diff. eqs.

`fitRangeRel`: Like `fitRange`, but relative to first voltage step [ms]. Specify any other voltage step as the first element. See `getTimeRelStep`.

**outRangeRel:** Only use this range of the simulated data for fitting. Defined same as `fitRangeRel`. Multiple rows can contain separate ranges are patched together.

**fitLevels:** Indices of voltage/current levels to use from clamp data. If empty, not fit is done.

**dispParams:** If non-zero, display params every once this many iterations.

**dispPlot:** If non-zero, update a plot of the fit at end of this many iterations. A zero means no plot will be produced at the end.

**saveModelFile:** If given, save the model every `dispParams` iteration.

**saveModelAutoNum:** Use this as a base number and use `saveModelFile` as `sprintf` formatted string that includes a number string (e.g., 'until a non-existing file name is found).

**savePlotFile:** If given, save the plot to this file every `dispPlot` iteration as the model file.

**plotMd:** `model_data_vcs` or subclass object to be used for plots. This reuses the data in the `md` and only updates the model parameters in the plot.

**quiet:** If 1, do not include cell name on title.

### Returns:

`a_md`: Updated `model_data_vcs` object with fit. `a_doc`: A `doc_plot` object containing the annotated figure.

### Example:

```
>> a_md = ...
fit(a_md, '', ...
struct('fitRangeRel', [-.2 165], 'fitLevels', 1:5, ...
'dispParams', 5, ...
'optimset', struct('Display', 'iter')));
```

**See also:** [param\\_I\\_v](#) (p. ??), [param\\_func](#) (p. ??), [doc\\_plot](#) (p. 97), [voltage\\_clamp/getTimeRelStep](#) (p. 339)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2010/10/12

---

### A.18.5 Method `model_data_vcs/get`

**Summary:** Defines generic attribute retrieval for objects.

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/09/14

---

#### A.18.6 Method `model_data_vcs/plot`

**Summary:** Generic method to plot a `tests_db` or a subclass. Requires a `plot_abstract` method to be defined for this object.

**Usage:**

```
h = plot(a_obj, title_str, props)
```

**Parameters:**

`a_obj`: An object.

`title_str`: (Optional) String to append to plot title.

`props`: A structure with any optional properties, passed to `plot_abstract`.

**Returns:**

`h`: The figure handle created.

**See also:** [plot\\_abstract](#) (p. 180), [plotFigure](#) (p. ??)

**Author:** Cengiz Gunay ;cgunay@emory.edu, 2004/10/06

---

#### A.18.7 Method `model_data_vcs/plotDataCompare`

**Summary:** Superpose model and data raw traces.

**Usage:**

```
a_p = plotDataCompare(a_md, title_str, props)
```

**Parameters:**

`a_md`: A `model_data_vcs` object.

`title_str`: (Optional) Text to appear in the plot title.

`props`: A structure with any optional properties.

`quiet`: If 1, only use given `title_str`.

`zoom`: Zoom into activation or inactivation parts if 'act' or 'inact', resp.

`skipStep`: Number of voltage steps to skip at the start for zoom (default=0).

`showSub`: also plot subtracted current

`showV`: also plot voltage protocol.

`levels`: Only plot these current and voltage levels

`colorLevels`: Cycle colors every this number.

`axisLimits`: Set current traces to these limits unless 'zoom' prop is specified.

**iLimits:** If specified, override axisLimits y-axis values with these only for the data plot (not the subtraction plot).

**Returns:**

a\_p: A plot\_abstract object.

**Example:**

```
>> a_md = model_data_vcs(model, data_vc)
>> plotFigure(plotDataCompare(a_md, 'my model'))
```

**See also:** [model\\_data\\_vcs](#) (p. 115), [voltage\\_clamp](#) (p. 337), [plot\\_abstract](#) (p. 180), [plotFigure](#) (p. ??)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2010/10/12

---

**A.18.8 Method** `model_data_vcs/plotDataModelSub`

**Summary:** Plot model traces subtracted from raw data.

**Usage:**

```
a_p = plotDataModelSub(a_md, title_str, props)
```

**Parameters:**

a\_md: A model\_data\_vcs object.

title\_str: (Optional) Text to appear in the plot title.

props: A structure with any optional properties.

quiet: If 1, only use given title\_str.

zoom: Zoom into activation or inactivation parts if 'act' or 'inact', resp.

skipStep: Number of voltage steps to skip at the start for zoom (default=0).

levels: Only plot these current and voltage levels

colorLevels: Cycle colors every this number.

axisLimits: Set current traces to these limits unless 'zoom' prop is specified. (Rest passed to voltage\_clamp/plot\_abstract)

**Returns:**

a\_p: A plot\_abstract object.

**Example:**

```
>> a_md = model_data_vcs(model, data_vc)
>> plotFigure(plotDataModelSub(a_md, 'my model'))
```

**See also:** [model\\_data\\_vcs](#) (p. 115), [voltage\\_clamp](#) (p. 337), [voltage\\_clamp/plot\\_abstract](#) (p. 343), [plot\\_abstract](#) (p. 180), [plotFigure](#) (p. ??)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2010/10/21

---

#### A.18.9 Method `model_data_vcs/plotModelInfs`

**Summary:** Plot model `m_inf` and `h_inf` curves.

**Usage:**

```
a_p = plotModelInfs(a_md, title_str, props)
```

**Parameters:**

`a_md`: A `model_data_vcs` object.  
`title_str`: (Optional) Text to appear in the plot title.  
`props`: A structure with any optional properties.  
`quiet`: If 1, only use given `title_str`.

**Returns:**

`a_p`: A `plot_abstract` object.

**Example:**

```
>> a_md = model_data_vcs(model, data_vc)
>> plotFigure(plotModelInfs(a_md, 'my model'))
```

**See also:** [model\\_data\\_vcs](#) (p. 115), [voltage\\_clamp](#) (p. 337), [plot\\_abstract](#) (p. 180), [plotFigure](#) (p. ??)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2010/10/12

---

#### A.18.10 Method `model_data_vcs/plotModelTaus`

**Summary:** Plot I/V curves comparing model and data.

**Usage:**

```
a_p = plotModelTaus(a_md, title_str, props)
```

**Parameters:**

`a_md`: A `model_data_vcs` object.  
`title_str`: (Optional) Text to appear in the plot title.  
`props`: A structure with any optional properties.  
`quiet`: If 1, only use given `title_str`.

**Returns:**

a\_p: A plot\_abstract object.

**Example:**

```
>> a_md = model_data_vcs(model, data_vc)
>> plotFigure(plotModelTaus(a_md, 'I/V curves'))
```

**See also:** [model\\_data\\_vcs](#) (p. 115), [voltage\\_clamp](#) (p. 337), [plot\\_abstract](#) (p. 180), [plotFigure](#) (p. ??)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2010/10/11

---

### A.18.11 Method model\_data\_vcs/plotPeaksCompare

**Summary:** Plot I/V curves comparing model and data.

**Usage:**

```
a_p = plotPeaksCompare(a_md, title_str, props)
```

**Parameters:**

a\_md: A model\_data\_vcs object.

title\_str: (Optional) Text to appear in the plot title.

props: A structure with any optional properties.

quiet: If 1, only use given title\_str.

skipStep: Number of voltage steps to skip at the start (default=0).

**Returns:**

a\_p: A plot\_abstract object.

**Example:**

```
>> a_md = model_data_vcs(model, data_vc)
>> plotFigure(plotPeaksCompare(a_md, 'I/V curves'))
```

**See also:** [model\\_data\\_vcs](#) (p. 115), [voltage\\_clamp](#) (p. 337), [plot\\_abstract](#) (p. 180), [plotFigure](#) (p. ??)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2010/10/11

---

### A.18.12 Method `model_data_vcs/plot_abstract`

**Summary:** Superpose model and data raw traces.

**Usage:**

```
a_p = plot_abstract(a_md, title_str, props)
```

**Parameters:**

`a_md`: A `model_data_vcs` object.

`title_str`: (Optional) Text to appear in the plot title.

`props`: A structure with any optional properties.

`quiet`: If 1, only use given `title_str`.

`zoom`: Zoom into activation or inactivation parts if 'act' or 'inact', resp. Can be a cell to have multiple of these.

`skipStep`: Number of voltage steps to skip at the start for zoom (default=0).

`show`: 'sub' for subtracted current, and 'v' for voltage trace at the bottom row.

`levels`: Only plot these current and voltage levels

`colorLevels`: Cycle colors every this number.

`axisLimits`: Set current traces to these limits unless 'zoom' prop is specified. If it has multiple rows, create multiple data plots for each set of limits.

`vLimits`: If given, limit all voltage plot X axes to these.

`iLimits`: If specified, override `axisLimits` y-axis values with these only for the data plot (not the subtraction plot).

`dataPlotProps`: Props passed to `plotDataCompare`.

**Returns:**

`a_p`: A `plot_abstract` object.

**Example:**

```
>> a_md = model_data_vcs(model, data_vc)
>> plotFigure(plot_abstract(a_md, 'my model'))
```

**See also:** [model\\_data\\_vcs](#) (p. 115), [voltage\\_clamp](#) (p. 337), [plot\\_abstract](#) (p. 180), [plotFigure](#) (p. ??)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2010/10/12

---

**A.18.13 Method** `model_data_vcs/selectFitParams`

**Summary:** Constrain or release model parameters for fast current.

**Usage:**

```
a_md = selectFitParams(a_md, select_what, fit_nofit, props)
```

**Parameters:**

`a_md`: A `model_data_vcs` object.

`select_what`: One of 'passive', 'fast', 'fastInact'

`fit_nofit`: 1 for including in fits and 0 for not.

`props`: A structure with any optional properties.

**Returns:**

`a_md`: Updated object.

**Example:**

```
>> a_md = selectFitParams(model_data_vcs(model, data_vc))
```

**See also:** [model\\_data\\_vcs](#) (p. 115), [model\\_data\\_vcs/fit](#) (p. 116), [voltage.clamp](#) (p. 337), [plot.abstract](#) (p. 180), [plotFigure](#) (p. ??)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2010/10/23

---

**A.18.14 Method** `model_data_vcs/set`

**Summary:** Generic method for setting object attributes.

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/10/08

---

**A.18.15 Method** `model_data_vcs/subsasgn`

**Summary:** Defines generic index-based assignment for objects.

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2006/02/06

---

**A.18.16 Method** `model_data_vcs/subsref`

**Summary:** Defines indexing for `tests_db` objects for `()` and `.` operations.

**Usage:**

```
obj = obj(rows, tests) obj = obj.attribute
```

**Description:** Returns attributes or selects the given test columns and rows and returns in a new `tests_db` object.

**Parameters:**

`obj`: A `tests_db` object.

`rows`: A logical or index vector of rows. If `':'`, all rows.

`tests`: Cell array of test names or column indices. If `':'`, all tests.

`attribute`: A `tests_db` class attribute.

**Returns:**

`obj`: The new `tests_db` object.

**See also:** [subsref](#) (p. ??), [tests\\_db](#) (p. 255)

**Author:** Cengiz Gunay ;cgunay@emory.edu, 2004/09/17

---

**A.18.17 Method** `model_data_vcs/updateModel`

**Summary:** Simulate and save new model into object.

**Usage:**

```
a_md = updateModel(a_md, model_f, props)
```

**Description:** Simulates the model to update the `model_vc` contained.

**Parameters:**

`a_md`: A `model_data_vcs` object.

`model_f`: (optional) `param_func` or subclass object that holds the new model function. If not given, existing model is simulated.

`props`: A structure with any optional properties.  
(passed to `voltage_clamp/simModel`)

**Returns:**

`a_md`: Updated object.

**Example:**

```
>> a_md = model_data_vcs(model_f, data_vc)
>> a_md = updateModel(a_md, new_model_f))
```

**See also:** [model\\_data\\_vcs](#) (p. 115)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2010/10/14

---

### A.19 Class `model_ranked_to_physiol_bundle`

#### A.19.1 Constructor `model_ranked_to_physiol_bundle/model_ranked_to_physiol_bundle`

**Summary:** A DB bundled with its dataset, ranked to a physiology DB bundle.

**Usage:**

```
r_bundle = model_ranked_to_physiol_bundle(a_dataset, a_db, a_ranked_db, a_crit_bundle, props)
```

**Description:** This is a subclass of `model_ct_bundle`, specialized for model datasets.

**Parameters:**

`a_dataset`: A `params_cip_trace_fileset` object.

`a_db`: The raw `params_tests_db` object created from the dataset. It only needs to have the `pAcip`, `trial`, and `ItemIndex` columns.

`a_ranked_db`: The one-model-per-line DB created from the raw DB.

`a_crit_bundle`: The bundle object associated with `crit_db` that caused the ranking in `a_ranked_db`.

`props`: A structure with any optional properties.

**Returns a structure object with the following fields:**

`crit_bundle`, `model_ct_bundle`.

**See also:** [model\\_ct\\_bundle](#) (p. 107), [ranked\\_db](#) (p. 200), [params\\_tests\\_dataset](#) (p. 131)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2005/12/13

---

#### A.19.2 Method `model_ranked_to_physiol_bundle/comparisonReport`

**Summary:** OBSOLETE - Generates a report by comparing `r_bundle` with the given match criteria, `crit_db` from `crit_bundle`.

**Usage:**

```
a_doc_multi = comparisonReport(r_bundle, crit_bundle, crit_db, props)
```

**Description:** Generates a LaTeX document with: - (optional) Raw traces compared with some best matches at different distances - Values of some top matching a\_db rows and match errors in a floating table. - colored-plot of measure errors for some top matches. - Parameter distributions of 50 best matches as a bar graph.

**Parameters:**

**r\_bundle:** A dataset\_db\_bundle object that contains the DB to compare rows from.  
**crit\_bundle:** A dataset\_db\_bundle object that contains the criterion dataset.  
**crit\_db:** A tests\_db object holding the match criterion tests and STDs which can be created with matchingRow.  
**props:** A structure with any optional properties.  
**caption:** Identification of the criterion db (not needed/used?).  
**num\_matches:** Number of best matches to display (default=10).  
**rotate:** Rotation angle for best matches table (default=90).

**Returns:**

tex\_string: LaTeX document string.

**See also:** `displayRowsTeX` (p. ??)

**Author:** Cengiz Gunay ;cgunay@emory.edu, 2006/01/17

---

### A.19.3 Method `model_ranked_to_physiol_bundle/plotCompareRanks`

**Summary:** OBSOLETE - Generates a plots of given ranks from the ranked\_bundle.

**Usage:**

```
plots = plotCompareRanks(r_bundle, crit_bundle, crit_db, props)
```

**Parameters:**

**r\_bundle:** A ranked\_bundle object.  
**ranks:** Vector of rank indices for which to generate the plots.  
**props:** A structure with any optional properties.

**Returns:**

plots: A structure that contains the joined\_db, and the plot vectors trace\_d100\_plots and trace\_h100\_plots.

**Example:**

```
>> plots = plotCompareRanks(r, 1:10);  
>> plotFigure(plots.trace_d100_plots(1), 'The best matching +100 pA CIP trace');
```

**See also:**

**Author:** Cengiz Gunay `jcgunay@emory.edu`, 2006/01/16

---

### A.19.4 Method `model_ranked_to_physiol_bundle/plotfICurve`

**Usage:**

```
a_doc = docfICurve(r_bundle, crit_bundle, crit_db, props)
```

**Parameters:**

**r\_bundle:** A `ranked_bundle` object.  
**rank\_num:** Rank index for which to generate the `a_doc`.  
**props:** A structure with any optional properties.

**Returns:**

`a_doc`: A `doc_plot` that contains a f-I curve plot and associated captions.

**Example:**

```
>> a_d = docfICurve(r, 1);  
>> plot(a_d, 'The f-I curve of best matching model');
```

**See also:** [doc\\_generate](#) (p. 93), [doc\\_plot](#) (p. 97)

**Author:** Cengiz Gunay `jcgunay@emory.edu`, 2006/01/16

---

## A.20 Class `params_cip_trace_fileset`

### A.20.1 Constructor `params_cip_trace_fileset/params_cip_trace_fileset`

**Summary:** Description of a raw dataset consisting of `cip_trace` files varying with parameter values.

**Usage:**

```
obj = params_cip_trace_fileset(file_pattern, dt, dy, pulse_time_start, pulse_time_width, id,  
props)
```

**Description:** This is a subclass of `params_tests_fileset`.

**Parameters:**

**file\_pattern:** File pattern mathing all files to be loaded.  
**dt:** Time resolution [s]  
**dy:** y-axis resolution [ISI (V, A, etc.)]  
**pulse\_time\_start, pulse\_time\_width:** Start and width of the pulse [dt]

**id:** An identification string

**props:** A structure with any optional properties.

**profile\_method\_name:** Use this profile method that takes a `cip_trace` object and returns a `results_profile` class. It can be `'cip_trace_profile'` (default, but outdated) or `'getProfileAllSpikes'` (more current). (All other props are passed to `cip_trace` objects)

**Returns a structure object with the following fields:**

`params_tests_fileset`, `pulse_time_start`, `pulse_time_width`.

**Example:**

```
>> fileset = params_cip_trace_fileset('/home/abc/data/*.bin', 1e-4, 1e-3, 20001, 10000, 'sim', 'dataset_gps0501', struct('trace_time_start', 10001, 'type', 'sim', 'scale_y', 1e3))
```

**See also:** [params\\_tests\\_fileset](#) (p. 157), [params\\_tests\\_db](#) (p. 138)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/09/14

---

### A.20.2 Method `params_cip_trace_fileset/cip_trace`

**Summary:** Loads raw `cip_traces` for each given `file_index` in this `fileset`.

**Usage:**

```
a_cip_trace = cip_trace(fileset, file_index|a_db, props)
```

**Parameters:**

**fileset:** A `params_tests_fileset`.

**file\_index:** A single or array of indices of files in `fileset`.

**a\_db:** A DB created by this `fileset` to read the item indices from.

**props:** A structure with any optional properties.

**neuronLabel:** Used for annotation purposes.

**Returns:**

`a_cip_trace`: A `cip_trace` object.

**See also:** [cip\\_trace](#) (p. 56), [params\\_tests\\_fileset](#) (p. 157)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/09/13

---

### A.20.3 Method `params_cip_trace_fileset/cip_trace_profile`

**Summary:** Loads a raw `cip_trace_profile` given a `file_index` to this fileset.

**Usage:**

```
a_cip_trace_profile = cip_trace_profile(fileset, file_index)
```

**Parameters:**

`fileset`: A `params_tests_fileset`.

`file_index`: Index of file in fileset.

**Returns:**

`a_cip_trace_profile`: A `cip_trace_profile` object.

**See also:** [cip\\_trace\\_profile](#) (p. 71), [params\\_tests\\_fileset](#) (p. 157)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/09/14

---

### A.20.4 Method `params_cip_trace_fileset/ctFromRows`

**Summary:** Loads a `cip_trace` object from raw data files in the fileset.

**Usage:**

```
a_cip_trace = ctFromRows(m_fileset, m_dball, a_db|itemIndices, cip_levels, props)
```

**Parameters:**

`m_fileset`: A `physiol_cip_traceset_fileset` object.

`m_dball`: A DB created by this fileset that contains the `trial`, `pAcip`, and `ItemIndex` cols.

`a_db`: A DB that has one trial for each `cip_trace` to be loaded.

`itemIndices`: A column vector with `ItemIndex` numbers.

`cip_levels`: A column vector of CIP-levels to be loaded.

`props`: A structure with any optional properties.

`neuronLabel`: appropriate unique neuron label generated by the bundle.  
(passed to `params_cip_trace_fileset/cip_trace`)

**Returns:**

`a_cip_trace`: One or more `cip_trace` objects that hold the raw data.

**See also:** [loadItemProfile](#) (p. ??), [physiol\\_cip\\_traceset/cip\\_trace](#) (p. 172)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2005/07/13

---

**A.20.5 Method** `params.cip_trace_fileset/display`

**Author:** Cengiz Gunay `jcgunay@emory.edu`, 2004/08/04

---

**A.20.6 Method** `params.cip_trace_fileset/get`

**Summary:** Defines generic attribute retrieval for objects.

**Author:** Cengiz Gunay `jcgunay@emory.edu`, 2004/09/14

---

**A.20.7 Method** `params.cip_trace_fileset/loadItemProfile`

**Summary:** Loads a `cip_trace_profile` object from a raw data file in the fileset.

**Usage:**

```
[params_row, tests_row] = loadItemProfile(fileset, file_index)
```

**Parameters:**

**fileset:** A `params_tests_fileset`.

**file\_index:** Index of file in fileset.

**Returns:**

**a\_profile:** A profile object that implements the `getResults` method.

**See also:** `itemResultsRow` (p. ??), `params_tests_fileset` (p. 157), `paramNames` (p. ??), `testNames` (p. ??)

**Author:** Cengiz Gunay `jcgunay@emory.edu`, 2004/09/14

---

**A.20.8 Method** `params.cip_trace_fileset/set`

**Summary:** Generic method for setting object attributes.

**Author:** Cengiz Gunay `jcgunay@emory.edu`, 2004/10/08

---

## A.21 Class `params_results_profile`

### A.21.1 Constructor `params_results_profile/params_results_profile`

**Summary:** Profile with parameters and results together.

**Description:** This is a subclass of `results_profile`, improved by including parameter names and values. Should make it easier to code dataset classes. Usage 1 is for convenience, same information is contained in `results_obj` in Usage 2.

**Parameters:**

`params`: Structure with parameter names and values.  
`results`: Structure with result names and values (Usage 1).  
`results_obj`: A `results_profile` object with test results.  
`id`: Identification string (Usage 1).  
`props`: A structure with any optional properties (Usage 1).

**Returns a structure object with the following fields:**

`params`, `results` (`results_obj` above)

**See also:** [results\\_profile](#) (p. 206), [params\\_tests\\_dataset](#) (p. 131)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2011/07/05

---

### A.21.2 Method `params_results_profile/get`

**Summary:** Defines generic attribute retrieval for objects.

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/09/14

---

## A.22 Class `params_tests_dataset`

### A.22.1 Constructor `params_tests_dataset/params_tests_dataset`

**Summary:** Contains a set of data objects or files of raw data varying with parameter values.

**Usage:**

```
obj = params_tests_dataset(list, dt, dy, id, props)
```

**Description:** This is an abstract base class for keeping dataset information separate from the parameters-results database (`params_tests_db`). The list contents can be filenames or objects (such as `cip_traces`) from which to get the raw data. The dataset should have all the necessary information to create a db when needed. This is an abstract class, that it cannot act on its own. Only fully implemented subclasses can actually hold datasets. See methods below.

**Parameters:**

**list:** Array of dataset items (filenames, objects, etc.).  
**dt:** Time resolution [s]  
**dy:** y-axis resolution [integral V, A, etc.]  
**id:** An identification string.  
**props:** A structure with any optional properties.  
**type:** type of file (default = ")  
**loadItemProfileFunc:** Function name or handle to be called as with (dataset, index, param\_row, props) to load a dataset item during database creation and return a results\_profile. Changing this property allows creating different databases from same dataset. It also allows loading a novel dataset through this generic class.

**Returns a structure object with the following fields:**

list, dt, dy, id, props (see above).

**See also:** [params\\_tests\\_db](#) (p. 138), [params\\_tests\\_fileset](#) (p. 157), [cip\\_traces\\_dataset](#) (p. 73)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/12/02

---

**A.22.2 Method** `params_tests_dataset/addItem`

**Summary:** Returns the new dataset with the added item.

**Usage:**

```
dataset = addItem(dataset, item)
```

**Description:** Note that, this is NOT the way to create a dataset. It is only intended for small additions to an existing dataset. This method is too slow for creating large datasets. The normal method for creating datasets is providing the full list of items to the class constructor.

**Parameters:**

**dataset:** A `params_tests_dataset`.  
**item:** New item to add in dataset.

**Returns:**

dataset: With the added item.

**See also:** [itemResultsRow](#) (p. ??), [params\\_tests\\_dataset](#) (p. 131), [paramNames](#) (p. ??), [testNames](#) (p. ??)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2005/01/25

---

**A.22.3 Method** `params_tests_dataset/display`

**Author:** Cengiz Gunay `jcgunay@emory.edu`, 2004/08/04

---

**A.22.4 Method** `params_tests_dataset/get`

**Summary:** Defines generic attribute retrieval for objects.

**Author:** Cengiz Gunay `jcgunay@emory.edu`, 2004/09/14

---

**A.22.5 Method** `params_tests_dataset/getItem`

**Summary:** Returns the dataset item at given index.

**Usage:**

```
item = getItem(dataset, index)
```

**Parameters:**

**dataset:** A `params_tests_dataset`.

**index:** Index of item in dataset.

**Returns:**

item: Object, filename, etc.

**See also:** `itemResultsRow` (p. ??), `params_tests_dataset` (p. 131), `paramNames` (p. ??), `testNames` (p. ??)

**Author:** Cengiz Gunay `jcgunay@emory.edu`, 2004/12/03

---

**A.22.6 Method** `params_tests_dataset/getItemParams`

**Summary:** Get the parameter values of a dataset item.

**Usage:**

```
params_row = getItemParams(dataset, index, a_profile)
```

**Description:** This method can retrieve the item parameters by using either the dataset and the index to find the item or simply by using the item profile, `a_profile`.

**Parameters:**

**dataset:** A `params_tests_dataset`.

**index:** Index of item in dataset.

**a\_profile:** An item profile.

**Returns:**

params\_row: Parameter values in the same order of paramNames

**See also:** [itemResultsRow](#) (p. ??), [params\\_tests\\_dataset](#) (p. 131), [paramNames](#) (p. ??), [testNames](#) (p. ??)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2004/09/10

---

**A.22.7 Method** `params_tests_dataset/itemResultsRow`

**Summary:** Analyze data from the dataset and return its parameter and test values.

**Usage:**

```
[params_row, tests_row] = itemResultsRow(dataset, index)
```

**Description:** This method is designed to be reused from subclasses as long as the `loadItemProfile` method is properly overloaded. Adds an Index column to the DB to keep track of raw data items after shuffling.

**Parameters:**

dataset: A `params_tests_dataset`.

index: Index of file in dataset.

props: A structure with any optional properties.  
(passed to `loadItemProfileFunc`)

**Returns:**

params\_row: Parameter values in the same order of paramNames  
tests\_row: Test values in the same order with testNames

**See also:** [loadItemProfile](#) (p. ??), [params\\_tests\\_dataset](#) (p. 131), [paramNames](#) (p. ??), [testNames](#) (p. ??)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2004/09/10

---

**A.22.8 Method** `params_tests_dataset/loadItemProfile`

**Summary:** Generates a results\_profile object from a dataset item.

**Usage:**

```
a_profile = loadItemProfile(dataset, item_index)
```

**Description:** If `getResults` returns a `params_results_profile`, then implementing `paramNames` and `getItemParams` become unnecessary.

**Parameters:**

**dataset:** A `params_tests_dataset` object.  
**item\_index:** Index of item in dataset.  
**params\_row:** Parameter values for this item (default=[])  
**props:** Struct with optional properties.

**Returns:**

`a_profile`: A profile object that implements the `getResults` method.

**See also:** `itemResultsRow` (p. ??), `params_tests_fileset` (p. 157), `paramNames` (p. ??), `testNames` (p. ??)

**Author:** Cengiz Gunay `jcgunay@emory.edu`, 2011/07/05

---

**A.22.9 Method `params_tests_dataset/params_tests_db`**

**Summary:** Generates a `params_tests_db` object from the dataset.

**Usage:**

```
db_obj = params_tests_db(obj, items, props)
```

**Description:** This is a converter method to convert from `params_tests_dataset` to `params_tests_db`. Uses `readDBItems` to read the files. A customized subclass should provide the correct `paramNames`, `testNames`, and `itemResultsRow` functions. Adds a `ItemIndex` column to the DB to keep track of raw data files after shuffling.

**Parameters:**

**obj:** A `params_tests_dataset` object.  
**items:** (Optional) List of item indices to use to create the db.  
**props:** Any optional params to pass to `params_tests_db`.

**Returns:**

`db_obj`: A `params_tests_db` object.

**See also:** `readDBItems` (p. ??), `params_tests_db` (p. 138), `params_tests_dataset` (p. 131), `itemResultsRow` `testNames` (p. ??), `paramNames` (p. ??)

**Author:** Cengiz Gunay `jcgunay@emory.edu`, 2004/09/09

---

### A.22.10 Method `params_tests_dataset/readDBItems`

**Summary:** Reads all items to generate a `params_tests_db` object.

**Usage:**

```
[params, param_names, tests, test_names] = readDBItems(obj, items)
```

**Description:** This is a generic method to convert from `params_tests_fileset` to a `params_tests_db`, or a subclass. This method depends on the `paramNames`, `testNames`, and `itemResultsRow` functions. Outputs of this function can be directly fed to the constructor of a `params_tests_db` or a subclass.

**Parameters:**

`obj`: A `params_tests_fileset` object.

`items`: (Optional) List of item indices to use to create the db.

**Returns:**

`params`, `param_names`, `tests`, `test_names`: See `params_tests_db`.

**See also:** [params\\_tests\\_db](#) (p. 138), [params\\_tests\\_fileset](#) (p. 157), [itemResultsRow](#) (p. ??), [paramNames](#) (p. ??), [testNames](#) (p. ??)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/11/24

---

### A.22.11 Method `params_tests_dataset/set`

**Summary:** Generic method for setting object attributes.

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/10/08

---

### A.22.12 Method `params_tests_dataset/setProp`

**Summary:** Generic method for setting optional object properties.

**Usage:**

```
obj = setProp(obj, prop1, val1, prop2, val2, ...)
```

**Description:** Modifies or adds property values. As many property name-value pairs can be specified.

**Parameters:**

`obj`: Any object that has a `props` field.

`attr`: Property name

`val`: Property value.

**Returns:**

obj: The new object with the updated properties.

**See also:**

**Author:** Cengiz Gunay jcgunay@emory.edu, 2004/11/22

---

**A.22.13 Method** `params_tests_dataset/subsasgn`

**Summary:** Defines generic index-based assignment for objects.

**Author:** Cengiz Gunay jcgunay@emory.edu, 2006/02/06

---

**A.22.14 Method** `params_tests_dataset/subsref`

**Summary:** Defines generic indexing for objects.

---

**A.22.15 Method** `params_tests_dataset/testNames`

**Summary:** Returns the ordered names of tests for this dataset.

**Usage:**

```
[test_names a_prof] = testNames(dataset, item)
```

**Description:** Looks at the results of the first file to find the test names.

**Parameters:**

**dataset:** A `params_tests_dataset`.

**item:** (Optional) If given, read names by loading item at this index.

**Returns:**

**test\_names:** Cell array with ordered parameter names. **a\_prof:** Profile of the item read to find test names.

**See also:** [params\\_tests\\_dataset](#) (p. 131), [paramNames](#) (p. ??), [testNames](#) (p. ??)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2004/09/10

---

## A.23 Class `params_tests_db`

### A.23.1 Constructor `params_tests_db/params_tests_db`

**Summary:** A generic database of test results varying with parameter values, organized in a matrix format.

**Description:** This is a subclass of `tests_db`. Defines all operations on this structure so that subclasses can use them.

**Parameters:**

`num_params`: Number of parameters.  
`a_tests_db`: A `tests_db` upon which to build the `params_tests_db`.  
`props`: A structure with any optional properties.

**Returns a structure object with the following fields:**

`tests_db num_params`: Number of variable parameters in simulations.

**See also:** [tests\\_db](#) (p. 255), [test\\_variable\\_db \(N/I\)](#) (p. ??)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/09/08

---

### A.23.2 Method `params_tests_db/addColumns`

**Summary:** Inserts new columns to `tests_db`.

**Description:** Delegates to `tests_db/addColumns`, but maintains parameter columns for the 2nd usage.

**Parameters:**

`obj, b_obj`: A `tests_db` object.  
`test_names`: A single string or a cell array of test names to be added.  
`test_columns`: Data matrix of columns to be added.

**Returns:**

`obj`: The `tests_db` object that includes the new columns.

**See also:** [tests\\_db/addColumns](#) (p. 257), [allocateRows](#) (p. ??), [tests\\_db](#) (p. 255)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2015/05/18

---

### A.23.3 Method `params_tests_db/addParams`

**Summary:** Inserts new parameter columns to `tests_db`.

**Usage:**

```
obj = addParams(obj, param_names, param_columns)
```

**Description:** Adds new columns to the database and returns the new DB. This operation is expensive in the sense that the whole database matrix needs to be enlarged just to add a single new column. The method of allocating a matrix, filling it up, and then providing it to the `tests_db` constructor is the preferred method of creating `tests_db` objects. This method may be used for measures obtained by operating on raw measures.

**Parameters:**

`obj`: A `tests_db` object.

`param_names`: A cell array of param names to be added.

`param_columns`: Data matrix of columns to be added.

**Returns:**

`obj`: The `tests_db` object that includes the new columns.

**See also:** [allocateRows](#) (p. ??), [tests\\_db](#) (p. 255)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2005/10/11

---

### A.23.4 Method `params_tests_db/crossProd`

**Summary:** Create a DB by taking the cross product of two database row sets.

**Usage:**

```
cross_db = crossProd(a_db, b_db)
```

**Description:** Overloaded function to maintain correct number of parameters after cross product operation. See original in `tests_db/crossProd`.

**Parameters:**

`a_db`, `b_db`: A `tests_db` object.

**Returns:**

`cross_db`: The `tests_db` object with all combinations of rows.

**See also:** [tests\\_db/crossProd](#) (p. 266)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2005/10/11

---

#### A.23.5 Method `params_tests_db/delColumns`

**Summary:** Deletes columns from `tests_db`.

**Usage:**

```
index = delColumns(obj, tests)
```

**Description:** Overloaded function that maintains correct number of parameters. See original `tests_db/delColumns`.

**Parameters:**

`obj`: A `tests_db` object.

`tests`: Numbers or names of tests (see `tests2cols`)

**Returns:**

`obj`: The `tests_db` object that is missing the columns.

**See also:** [tests\\_db/delColumns](#) (p. 267)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2005/10/11

---

#### A.23.6 Method `params_tests_db/display`

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/08/04

---

#### A.23.7 Method `params_tests_db/displayRankingsTeX`

**Summary:** Generates and displays a ranking DB by comparing rows of `a_db` with the given match criteria.

**Usage:**

```
tex_string = displayRankingsTeX(a_db, crit_db, props)
```

**Description:** Generates a LaTeX document with: - Values of 10 best matching `a_db` rows in a floating table. - (optional) Raw traces compared with some best matches at different distances - Parameter distributions of 50 best matches as a bar graph.

**Parameters:**

`a_db`: A `params_tests_db` object to compare rows from.

`crit_db`: A `tests_db` object holding the match criterion tests and STDs which can be created with `matchingRow`.

`props`: A structure with any optional properties.

`caption`: Identification of the criterion db (not needed/used?).

**a\_dataset:** Dataset for a\_db.  
**a\_dball:** The non-joined DB for for a\_db.  
**crit\_dataset:** Dataset for crit\_db.  
**crit\_dball:** Dataset for crit\_db.  
**num\_matches:** Number of best matches to display (default=10).  
**rotate:** Rotation angle for best matches table (default=90).

**Returns:**

tex\_string: LaTeX document string.

**See also:** [rankVsDB](#) (p. ??), [displayRowsTeX](#) (p. ??)

**Author:** Cengiz Gunay {cgunay@emory.edu}, 2004/10/20

---

### A.23.8 Method `params_tests_db/fillMissingParams`

**Summary:** Add missing columns as params with given default fill value.

**Usage:**

```
db = fillMissingParams(db, col_names, fill_value)
```

**Parameters:**

**db:** A `tests_db` object.  
**col\_names:** A cell array of param names.  
**fill\_value:** Value to be used for missing columns.

**Returns:**

db: The `tests_db` object that includes the newly filled columns.

**See also:** [tests\\_db/fillMissingColumns](#) (p. 271), [params\\_tests\\_db/addParams](#) (p. 139), [params\\_tests\\_db/unionCat](#) (p. 154)

**Author:** Cengiz Gunay {cgunay@emory.edu}, 2008/06/02

---

### A.23.9 Method `params_tests_db/get`

**Summary:** Defines generic attribute retrieval for objects.

**Author:** Cengiz Gunay {cgunay@emory.edu}, 2004/09/14

---

#### A.23.10 Method `params_tests_db/getDualCIPdb`

**Summary:** Generates a database by merging selected tests of depolarizing and hyperpolarizing cip results.

**Usage:**

```
a_db = getDualCIPdb(db, depol_tests, hyper_tests, depol_suffix, hyper_suffix)
```

**Description:** `depol_tests` need to have the `RowIndex` column in it.

**Parameters:**

`db`: A `params_tests_db` object.

**Returns:**

`a_db`: A `params_tests_db` object of organized values.

**Example:**

```
>> control_phys_sdb = getDualCIPdb(control_phys_db, depol_tests, hyper_tests, '', 'Hyp100pA')
where depol_tests and hyper_tests are cell arrays of selected tests.
```

**See also:** [invarValues](#) (p. ??), [tests\\_3D\\_db](#) (p. 246), [corrCoefs](#) (p. ??), [tests\\_3D\\_db/plotPair](#) (p. ??)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2005/01/13

---

#### A.23.11 Method `params_tests_db/getParamNames`

**Summary:** Gets parameter column names.

**Usage:**

```
col_names = getParamNames(db)
```

**Description:** Convenience function that delegates to `getColNames`.

**Parameters:**

`db`: A `params_tests_db` object.

**Returns:**

`col_names`: A cell array of strings.

**See also:** [tests\\_db/getColNames](#) (p. 272), [tests\\_db](#) (p. 255)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2008/04/03

---

### A.23.12 Method `params_tests_db/getParamRowIndices`

**Summary:** Returns indices of rows with matching parameter values from rows of this db.

**Usage:**

```
row_indices = getParamRowIndices(a_db, rows, to_db)
```

**Parameters:**

`a_db`: A `params_tests_db` object.  
`rows`: rows to find indices for.  
`to_db`: Where to find the matching rows.

**Returns:**

`row_indices`: Array of row indices.

**See also:** `makeModifiedParamDB` (p. ??), `scanParamAllRows` (p. ??), `scaleParamsOneRow` (p. ??), `writeParFile` (p. ??)

**Author:** Cengiz Gunay ;cgunay@emory.edu, 2005/01/14

---

### A.23.13 Method `params_tests_db/getProfile`

**Summary:** Create a profile object from a `params_tests_db` by collecting statistics.

**Usage:**

```
a_pt_profile = getProfile(a_db, props)
```

**Description:** Calculates the following results items: `idx`: Name-index pairs for accessing results arrays. `t_hists`: Cell array of histograms of each test. `p_t3ds`: Cell array of invariant relations of each parameter with all tests. `pt_hists`: Cell array of separate test value histograms for unique value of each parameter. `p_stats`: Cell array of test stats for each param. `p_coefs`: Cell array of correlation coefficients for each parameter with all tests. `pt_coefs_hists`: Cell matrix of histograms of coefficients from correlations of each parameter with each test. `pp_coefs`: Cell 3D matrix of mean coefficients from correlations of each parameter with correlation coefficients of each parameter with each test.

**Parameters:**

`a_db`: A `params_tests_db` object.  
`props`: A structure with any optional properties.

**Returns a `params_tests_profile` object.**

**See also:** [params\\_tests\\_profile](#) (p. 162), [results\\_profile](#) (p. 206), [params\\_tests\\_db](#) (p. 138), [params\\_tests\\_fileset](#) (p. 157), [tests\\_db](#) (p. 255), [tests\\_3D\\_db](#) (p. 246), [histogram\\_db](#) (p. 100), [stats\\_db](#) (p. 239), [corrcoefs\\_db](#) (p. 83)

**Author:** Cengiz Gunay [cgunay@emory.edu](mailto:cgunay@emory.edu), 2004/10/13

---

#### A.23.14 Method `params_tests_db/invarParam`

**Summary:** Generates a 3D database of invariant values of a parameter and all test columns.

**Usage:**

```
a_3D_db = invarParam(db, param, props)
```

**Parameters:**

**db:** A `tests_db` object.

**param:** A parameter name/column number. It can be empty [], meaning to find all unique combinations of parameters.

**props:** A structure with any optional properties.

**removeRedun:** If 1 (default), clean database by removing redundant sets of parameters.

**removeCol:** If `removeRedun == 1`, name of parameter column to remove if found. Default: 'trial'. (others passed to `tests_db/invarValues`)

---

#### A.23.15 Method `params_tests_db/invarParams`

**Summary:** Calculates invariant param dbs for all parameters and returns in an array.

**Usage:**

```
p_t3ds = invarParams(a_db)
```

**Description:** Skips the 'ItemIndex' test.

**Parameters:**

**a\_db:** A `tests_db` object.

**Returns:**

**p\_t3ds:** An array of `tests_3D_dbs` for each param in `a_db`.

**See also:** [params\\_tests\\_profile](#) (p. 162)

**Author:** Cengiz Gunay [cgunay@emory.edu](mailto:cgunay@emory.edu), 2004/10/17

---

**A.23.16 Method** `params_tests_db/joinRows`

**Summary:** Joins the rows of the given db with rows of with\_db with matching RowIndex values.

**Usage:**

```
a_db = joinRows(db, with_db, props)
```

**Description:** Takes the desired columns in with\_db with rows having a row index and joins them next to dedired columns from the current db. Assumes each row index only appears once in with\_db. The created db preserves the ordering of with\_db.

**Parameters:**

**db:** A param\_tests\_db object.

**with\_db:** A tests\_db object with a RowIndex column.

**props:** A structure with any optional properties.

**indexColName:** (Optional) Name of row index column (default='RowIndex').

**Returns:**

**a\_db:** A params\_tests\_db object.

**See also:** [tests\\_db](#) (p. 255)

**Author:** Cengiz Gunay ;cgunay@emory.edu, 2004/10/16

---

**A.23.17 Method** `params_tests_db/matchingRow`

**Summary:** Creates a criterion database for matching the tests of a row.

**Usage:**

```
crit_db = matchingRow(a_db, row, props)
```

**Description:** Overloaded method for skipping parameter values. STD for param values will be NaNs.

**Parameters:**

**a\_db:** A tests\_db object.

**row:** A row index to match.

**props:** A structure with any optional properties.

**distDB:** Take the standard deviation from this db instead.

**Returns:**

**crit\_db:** A tests\_db with two rows for values and STDs.

**See also:** [tests\\_db/matchingRow](#) (p. 280), [rankMatching](#) (p. ??), [tests\\_db](#) (p. 255), [tests2cols](#) (p. ??)

**Author:** Cengiz Gunay [cgunay@emory.edu](mailto:cgunay@emory.edu), 2006/06/13

---

#### A.23.18 Method `params_tests_db/meanDuplicateParams`

**Summary:** Takes the mean of all measures for rows that have the same parameter columns.

**Usage:**

```
a_params_tests_db = meanDuplicateParams(db, props)
```

**Description:** Calls `tests_db/meanDuplicateRows` with `params` as `main_cols` and `tests` as `rest_cols`.

**Parameters:**

`db`: A `params_tests_db` object.

`props`: Structure with optional parameters.

**Returns:**

`a_params_tests_db`: The `db` object of with the means on page 1 and standard deviations on page 2.

**See also:** [tests\\_db/meanDuplicateRows](#) (p. 281), [tests\\_db/mean](#) (p. 281), [tests\\_db/std](#) (p. 309), [sortedUniqueValues](#) (p. ??)

**Author:** Cengiz Gunay [cgunay@emory.edu](mailto:cgunay@emory.edu), 2007/12/20

---

#### A.23.19 Method `params_tests_db/mergeMultipleCIPsInOne`

**Summary:** Merges multiple rows with different CIP data into one, generating a database of one row per neuron.

**Usage:**

```
a_db = mergeMultipleCIPsInOne(db, names_tests_cell, index_col_name, props)
```

**Description:** It calls `invarParam` to separate DB into pages with different CIP level data. Then uses the `names_tests_cell` to choose tests from each page to be merged into the final database row. The tests will be suffixed with the field name so that they can be distinguished. `RowIndex` columns will be automatically included, and one of them can be chosen with `index_col_name` that has values for all cells. The suffixed for needs to be used to choose `index_col_name`, such as `'RowIndex_H100pA'`, assuming `'H100pA'` was the field name in `names_tests_cell` that corresponds to page -100 pA.

**Parameters:**

**db:** A params\_tests.db object.

**names\_tests\_cell:** A cell array alternating suffix names and test column vectors.

The order of names correspond to each unique CIP level in db, with increasing order.

**index\_col\_name:** (Optional) Name of row index column (default is 'RowIndex' suffixed with the first field name).

**props:** A structure with any optional properties.

**cipLevels:** In case db is missing some levels, provides a list of cip levels that correspond to names\_tests.cell db. Missing levels are replaced with NaN values. DB is filtered to remove other CIP levels.

**Returns:**

**a\_db:** A params\_tests.db object of organized values.

**Example:**

```
>> control_phys_sdb =
mergeMultipleCIPsInOne(control_phys_db,
struct('H100pA', [1:10], 'D100pA', [1:10 16:18]),
'RowIndex_H100pA')
```

**See also:** [invarValues](#) (p. ??), [tests\\_3D\\_db](#) (p. 246), [corrCoefs](#) (p. ??), [tests\\_3D\\_db/plotVarBox](#) (p. 253)

**Author:** Cengiz Gunay ;cgunay@emory.edu, 2005/01/13

---

**A.23.20 Method params\_tests\_db/onlyRowsTests**

**Summary:** Returns a tests\_db that only contains the desired tests and rows (and pages).

**Usage:**

```
obj = onlyRowsTests(obj, rows, tests, pages)
```

**Description:** Selects the given dimensions and returns in a new tests\_db object. Makes sure num\_params remains correct.

**Parameters:**

**obj:** A tests\_db object.

**rows, tests:** A logical or index vector of rows, or cell array of names of rows. If ':', all rows. For names, regular expressions are supported if quoted with slashes (e.g., '/a.\*'). See tests2idx.

**pages:** (Optional) A logical or index vector of pages. ':' for all pages.

**Returns:**

**obj:** The new tests\_db object.

**See also:** [subsref](#) (p. ??), [tests\\_db](#) (p. 255), [test2idx](#) (p. ??)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2004/09/17

---

**A.23.21 Method** `params_tests_db/paramsCoefs`

**Summary:** Calculates a `corrcoefs_db` for each param and collects them in a cell array.

**Usage:**

```
p_coefs = paramsCoefs(a_db, p_t3ds)
```

**Description:** Skips the 'ItemIndex' test.

**Parameters:**

**a\_db:** A tests\_db object.

**p\_t3ds:** Cell array of invariant parameter databases.

**Returns:**

**p\_coefs:** A cell array of `corrcoefs_dbs` for each param in a\_db.

**See also:** [params\\_tests\\_profile](#) (p. 162)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2004/10/17

---

**A.23.22 Method** `params_tests_db/paramsHists`

**Summary:** Calculates histograms for all parameters and returns in a cell array.

**Usage:**

```
p_hists = paramsHists(a_db, props)
```

**Description:** Useful for looking at subset databases and find out what parameter values are used most. Skips the 'ItemIndex' column(s). Finds unique values of each parameter to make histograms.

**Parameters:**

**a\_db:** A tests\_db object.

**props:** A structure with any optional properties.

**paramVals:** Array of histogram bins to use as parameter values.

**Returns:**

p\_hists: An array of histograms for each parameter in a\_db.

**See also:** [params\\_tests\\_profile](#) (p. 162)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2004/10/20

---

**A.23.23 Method** params\_tests\_db/paramsParamsCoefs

**Summary:** Calculates a corrcoefs\_db for each param from correlations of variant params and invariant param coefs and collects them in a cell array.

**Usage:**

```
pp_coefs = paramsParamsCoefs(a_db, p_t3ds, p_coefs)
```

**Description:** Skips the 'ItemIndex' test.

**Parameters:**

a\_db: A tests\_db object.

p\_t3ds: Cell array of invariant parameter databases.

p\_coefs: Cell array of tests coefficients for each parameter.

**Returns:**

pp\_coefs: A cell array of corrcoefs\_dbs for each param combination in a\_db.

**See also:** [params\\_tests\\_profile](#) (p. 162)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2004/10/17

---

**A.23.24 Method** params\_tests\_db/paramsTestsCoefsHists

**Summary:** Calculates histograms for all pairs of params and tests coefficients and returns in a cell array.

**Usage:**

```
pt_coefs_hists = paramsTestsCoefsHists(a_db, p_coefs)
```

**Description:** Skips the 'ItemIndex' test.

**Parameters:**

a\_db: A tests\_db object.

p\_coefs: Cell array of tests coefficients for each parameter.

**Returns:**

pt.coefs\_hists: A cell array of corrcoefs\_dbs for each param in a\_db.

**See also:** [params\\_tests\\_profile](#) (p. 162)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2004/10/17

---

**A.23.25 Method** params\_tests\_db/plotParamsHists

**Summary:** Create a horizontal plot\_stack of parameter histograms.

**Usage:**

```
a_ps = plotParamsHists(a_db, title_str, props)
```

**Description:** Skips the 'ItemIndex' test.

**Parameters:**

a\_db: A params\_tests\_db object.

title\_str: (Optional) A string to be concatenated to the title.

props: A structure with any optional properties.

quiet: Do not display the DB id on the plot title.

barAxisProps: passed to plotEqSpaced for each bar axis.

stackAxisLimits: Axis limits for plot\_stack (default=[NaN NaN 0 Inf]).  
(Others passed to paramsHists, plotEqSpaced, and plot\_stack)

**Returns:**

a\_ps: A horizontal plot\_stack of plots

**See also:** [plot\\_stack](#) (p. 194), [paramsHists](#) (p. ??), [plotEqSpaced](#) (p. ??)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2005/04/07

---

**A.23.26 Method** params\_tests\_db/plotVarBoxMatrix

**Summary:** Create a stack of parameter-test variation plots organized in a matrix.

**Usage:**

```
a_plot_stack = plotVarBoxMatrix(a_db, p_t3ds)
```

**Description:** Skips the 'ItemIndex' test.

**Parameters:**

a\_db: A tests\_db object.

p\_t3ds: Cell array of invariant parameter databases.

**Returns:**

a\_plot\_stack: A plot\_stack with the plots organized in matrix form

**See also:** [params\\_tests\\_profile](#) (p. 162), [plotVar](#) (p. ??)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2004/10/17

---

**A.23.27 Method** `params_tests_db/rankVsAllDB`

**Summary:** Generates ranking DBs by comparing rows of a\_db with each row of to\_db.

**Usage:**

```
tex_string = rankVsAllDB(a_db, to_db, a_dataset, to_dataset)
```

**Description:** Distance is each measure difference divided by the STD in to\_db, squared and summed. Returned DB contains only the selected to\_tests and the parameters from initial DB.

**Parameters:**

a\_db: A params\_tests\_db object to compare rows from.

to\_db: A tests\_db object to compare it with.

a\_dataset: Dataset for a\_db.

to\_dataset: Dataset for crit\_db.

**Returns:**

ranked\_dbs: Array of created DBs with original rows and a distance measure, in ascending order. tex\_string: A LaTeX string for all tables created.

**See also:** [rankVsDB](#) (p. ??), [matchingRow](#) (p. ??), [rankMatching](#) (p. ??), [joinRows](#) (p. ??)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2004/12/10

---

**A.23.28 Method** `params_tests_db/rankVsDB`

**Summary:** Generates a ranking DB by comparing rows of this db with the given test criteria.

**Usage:**

```
a_ranked_db = rankVsDB(a_db, crit_db)
```

**Description:** Distance is each measure difference divided by the STD in to\_db, squared and summed. Returned DB contains only the selected tests from crit\_db and the parameters from initial a\_db.

**Parameters:**

**a\_db:** A params\_tests\_db object to compare rows from.  
**crit\_db:** A tests\_db object holding the match criterion tests and STDs which can be created with matchingRow.

**Returns:**

**a\_ranked\_db:** The created DB with original rows and a distance measure, in ascending order.

**See also:** [matchingRow](#) (p. ??), [rankMatching](#) (p. ??), [joinRows](#) (p. ??)

**Author:** Cengiz Gunay |cgunay@emory.edu|, 2004/10/20

---

### A.23.29 Method params\_tests\_db/reIndexNeurons

**Summary:** Re-index neurons with accending numbers.

**Usage:**

```
new_db = reIndexNeurons(a_db, startNum, colName)
```

**Description:** This is useful for avoiding NeuronId conflicts when concatenating two databases. It can also remove the unused number 'hole' (e.g. after deleting rows) and make the indices continuous.

**Parameters:**

**a\_db:** a tests\_db object  
**startNum:** the starting index number (default = 1)  
**colName:** the column name or number of neuron index. (default = 'NeuronId')

**Returns:**

**new\_db:** a new database with new neuron index.

**See also:** [physiol\\_bundle](#) (p. 164), [tests\\_db/physiol\\_bundle](#) (p. 285)

**Author:** Li Su. 03/21/2008

---

### A.23.30 Method `params_tests_db/scanParamAllRows`

**Summary:** OBSOLETE (use instead `varyParams`) - Scans given parameter range for each row in DB.

**Usage:**

```
a_params_db = scanParamAllRows(a_db, param, min_val, max_val, num_levels, props)
```

**Description:** Produces rows by replacing the desired parameter value, in all rows of DB, with `num_levels` values between the given boundaries, `min_val` and `max_val`. This results in a DB with `num_levels` times more rows than the original DB. Then, `writeParFile` can be used to generate a parameter file from this DB to drive new simulations.

**Parameters:**

`a_db`: A `params_tests_db` object whose first row is subject to modifications.

`param`: The parameter to be varied (see `tests2cols` for param description).

`min_val`, `max_val`: The low and high boundaries for the parameter value.

`num_levels`: Number of levels to produce, including the boundaries.

`props`: A structure with any optional properties.

`renameTrial`: If given, the 'trial' column is renamed to this name.

`levelFunc`: Use this function to get the parameter range with `feval(levelFunc, min_val, max_val, num_levels)`. Example: 'logLevels'

**Returns:**

`a_params_db`: A db only with params.

**Example:**

Sets NaF to given range with 100 levels:

```
>> naf_rows_db = scanParamAllRows(a_db(desired_rows, :), 'NaF', 0, 1000, 100);
```

**See also:** [writeParFile](#) (p. ??), [scaleParamsOneRow](#) (p. ??), [ranked\\_db/blockedDistances](#) (p. 200), [getParamRowIndices](#) (p. ??), [logLevels](#) (p. ??)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2006/02/16

---

### A.23.31 Method `params_tests_db/set`

**Summary:** Generic method for setting object attributes.

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/10/08

---

**A.23.32 Method** `params_tests_db/subsref`

**Summary:** Defines generic indexing for objects.

---

**A.23.33 Method** `params_tests_db/testsHists`

**Summary:** Calculates histograms for all tests and returns them in a cell array.

**Usage:**

```
t_hists = testsHists(a_db, num_bins)
```

**Description:** Skips the 'ItemIndex' test.

**Parameters:**

`a_db`: One or more `tests_db` objects in an array.

`num_bins`: Number of histogram bins (Optional, default=100), or vector of histogram bin centers.

**Returns:**

`t_hists`: An array of histograms for each test in `a_db`.

**See also:** [params\\_tests\\_profile](#) (p. 162)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/10/17

---

**A.23.34 Method** `params_tests_db/unionCat`

**Summary:** Vertically concatenate two or more databases with different parameters or tests.

**Usage:**

```
a_db = unionCat(db, with_db, ...)
```

**Description:** The parameters and tests in the result are a union of both. Adds 0 for parameter and NaN for tests in the rows which didn't have the additional columns before.

**Parameters:**

`db, with_db, ...`: `tests_db` objects to be concatenated together.

**Author:** Li Su, 2008-04-10

---

**A.23.35 Method** `params_tests_db/unionCatTwo`

**Usage:**

```
a_db = unionCat(db, with_db, props)
```

**Description:** The parameters and tests in the result are a union of both. Adds 0 for parameter and NaN for tests in the rows which didn't have the additional columns before.

**Parameters:**

`db, with_db:` `tests_db` objects to be concatenated together.

`props:` A structure with any optional properties.

`offsetTracesets:` If 1, make sure the `TracesetIndex` column is offset to non-overlapping values in the concatenated databases (default=0).

**Author:** Li Su, 2008-04-10

---

**A.23.36 Method** `params_tests_db/varyParams`

**Summary:** Varies chosen parameters in all rows by given levels.

**Usage:**

```
a_params_db = varyParamsOneRow(a_db, params, levels, props)
```

**Description:** Produces new rows by either multiplying or replacing the desired params with each value in levels. Thus, the newly created parameter db will be size of levels times bigger. Columns other than parameters will be pruned. Then, `writeParFile` can be used to generate a parameter file from this DB to drive new simulations.

**Parameters:**

`a_db:` A `params_tests_db` object.

`params:` Parameters to be varied (see `tests2cols`).

`levels:` Column vector of parameter values to multiply (1=unity) or to replace parameters with (see 'replace' prop).

`props:` A structure with any optional properties.

`replace:` Replace parameter values with levels instead of scaling.

**Returns:**

`a_params_db:` A db only with params.

**Example:**

Blocks NaF from 0

```
>> naf_rows_db = varyParams(a_db(desired_row, :), 'NaF', 0:0.1:1);
```

**See also:** [writeParFile](#) (p. ??), [ranked\\_db/blockedDistances](#) (p. 200), [getParamRowIndices](#) (p. ??)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2006/02/16

---

### A.23.37 Method `params_tests_db/writeParFile`

**Summary:** Creates or appends to text file all the parameter values in `a_db`.

**Usage:**

```
writeParFile(a_db, filename, props)
```

**Description:** Creates a text file that has a set of parameter values for each row. The first line is a header that contains number of parameters and total rows. If the file exists, the data is appended, but the header is NOT updated for efficiency considerations. Optionally, a parameter description file can be created that contains one parameter name per row. These files can be processed with various utilities to control simulations.

**Parameters:**

`a_db`: A `params_tests_db` object.

`filename`: Genesis parameter file to be created.

`props`: A structure with any optional properties.

`trialStart`: If given, adds/replaces the trial parameter and counts forward.

`makeParamDesc`: If 1, put the parameter names in a parameter description file with  
with a `.txt` extension.

`noAppend`: If given, do not append to file even if it exists

**Returns:**

nothing.

**Example:**

```
>> naf_rows_db = scanParamAllRows(a_db(desired_rows, :), 'NaF', 0, 1000, 100);  
>> writeParFile(naf_rows_db, 'naf.par')
```

**See also:** [scanParamAllRows](#) (p. ??), [scaleParamsOneRow](#) (p. ??), <https://github.com/cengique/param-search> (p. ??)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2005/03/13

---

## A.24 Class `params_tests_fileset`

### A.24.1 Constructor `params_tests_fileset/params_tests_fileset`

**Summary:** Description of a set of data files of raw data varying with parameter values.

**Usage:**

```
obj = params_tests_fileset(file_pattern, dt, dy, id, props)
```

**Description:** This is a subclass of `params_tests_dataset`. This class is used to generate `params_tests_db` objects and keep a connection to the raw data files. This class only keeps names of files and loads raw data files whenever it's requested. A database object can easily be generated using the conversion methods. Most methods defined here can be used as-is, however some should be overloaded in subclasses. The specific methods are `loadItemProfile`.

**Parameters:**

**file\_pattern:** File pattern, or cell array of patterns, matching all files to be loaded.

**dt:** Time resolution [s]

**dy:** y-axis resolution [ISI (V, A, etc.)]

**id:** An identification string

**props:** A structure with any optional properties.

- num\_params:** Number of parameters that appear in filenames (auto-detected by default; see props for `parseFilenameNamesVals`).
- fileParamsRegex:** Regular expression to find parameter names and values instead of the default function `parseFilenameNamesVals`. It will look for named capture variables 'name' and 'val'. See the 'names' option to `regex`.
- param\_trial\_name:** Use this name on the filename as the 'trial' parameter.
- trial\_hash:** Structure to get integer indices from non-integer trial numbers as key.
- trialHashFunc:** Produces structure key from trial number and precision (see `num2str`).
- param\_row\_filename:** If given, the 'trial' parameter will be used to address rows from this file and acquire parameters.
- param\_rows:** Instead of a file, just give parameters in this matrix.
- param\_desc\_filename:** Contains the parameter range descriptions one per each row. The parameter names are acquired from this file.
- param\_names:** Cell array of parameter names corresponding to the `param_row_filename` columns can be specified as an alternative to specifying `param_desc_filename`. These names are not for the parameters present in the data filename.

**profile\_method\_name:** It can be one of the profile-creating methods in this class. E.g., 'trace\_profile', 'srp\_trace\_profile', etc. OBSOLETE: see loadItemProfileFunc prop in params\_tests\_dataset. (Others passed to params\_tests\_dataset and parseFilenameNamesVals)

**Returns a structure object with the following fields:**

params\_tests\_dataset, path: The pathname to files.

**See also:** [params\\_tests\\_db](#) (p. 138), [tests\\_db](#) (p. 255), [params\\_tests\\_dataset](#) (p. 131), [regexp](#) (p. ??)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2004/09/09

---

### A.24.2 Method params\_tests\_fileset/addFiles

**Summary:** Adds to existing list of files in set.

**Usage:**

```
[a_fileset, index_list] = addFiles(a_fileset, file_pattern, props)
```

**Parameters:**

**a\_fileset:** A params\_tests\_fileset object.

**file\_pattern:** File pattern, or cell array of patterns, matching additional files.

**props:** A structure with any optional properties.

**param\_row\_filename:** Update parameters from here. The 'trial' parameter is used to address rows from this file and acquire parameters.

**Returns:**

**a\_fileset:** The augmented fileset object. **index\_list:** The vector of index numbers of the new files added. Can be used to selectively load the new files into a DB using params\_test\_db.

**See also:** [params\\_tests\\_fileset](#) (p. 157), [params\\_tests\\_dataset/params\\_test\\_db](#). (p. ??)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2006/02/01

---

### A.24.3 Method params\_tests\_fileset/display

**Author:** Cengiz Gunay jcgunay@emory.edu, 2004/08/04

---

**A.24.4 Method** `params_tests_fileset/get`

**Summary:** Defines generic attribute retrieval for objects.

**Author:** Cengiz Gunay `jcgunay@emory.edu`, 2004/09/14

---

**A.24.5 Method** `params_tests_fileset/getItemParams`

**Summary:** Get the parameter values of a fileset item.

**Usage:**

```
params_row = getItemParams(fileset, index)
```

**Parameters:**

**fileset:** A `params_tests_fileset`.

**index:** Index of item in fileset.

**Returns:**

`params_row`: Parameter values in the same order of `paramNames`

**See also:** `itemResultsRow` (p. ??), `params_tests_dataset` (p. 131), `paramNames` (p. ??), `testNames` (p. ??)

**Author:** Cengiz Gunay `jcgunay@emory.edu`, 2004/12/03

---

**A.24.6 Method** `params_tests_fileset/loadItemProfile`

**Summary:** Loads a profile object from a raw data file in the fileset.

**Usage:**

```
a_profile = loadItemProfile(fileset, file_index)
```

**Description:** First it looks for the prop `loadItemProfileFunc` to load the profile. Otherwise, it assumes fileset items can be loaded as traces. and runs `props.profile_method_name` if available, or simply creates a `trace_profile` object. Subclasses should overload this function to load the specific profile object they desire. The profile class should define a `getResults` method which is used in the `params_tests_dataset/itemResultsRow` method.

**Parameters:**

**fileset:** A `params_tests_fileset`.

**file\_index:** Index of file in fileset.

**params\_row:** Parameter values for this item (default=[])

**props:** A structure with any optional properties.  
(passed to loadItemProfileFunc)

**Returns:**

a\_profile: A results\_profile object that implements the getResults method.

**See also:** [results\\_profile](#) (p. 206), [params\\_tests\\_dataset/itemResultsRow](#) (p. 134)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2004/09/14

---

### A.24.7 Method `params_tests_fileset/paramNames`

**Summary:** Returns the ordered names of parameters for this fileset.

**Usage:**

```
param_names = paramNames(fileset, item)
```

**Description:** Looks at the filename of the first file to find the parameter names.

**Parameters:**

**fileset:** A `params_tests_fileset`.

**item:** (Optional) If given, read param names by loading item at this index.

**Returns:**

params\_names: Cell array with ordered parameter names.

**See also:** [params\\_tests\\_fileset](#) (p. 157), [testNames](#) (p. ??), [parseFilenameNamesVals](#) (p. ??)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2004/09/10

---

### A.24.8 Method `params_tests_fileset/set`

**Summary:** Generic method for setting object attributes.

**Author:** Cengiz Gunay jcgunay@emory.edu, 2004/10/08

---

#### A.24.9 Method `params_tests_fileset/trace`

**Summary:** Loads a raw trace given a `file_index` to this fileset.

**Usage:**

```
a_trace = trace(fileset, file_index)
```

**Parameters:**

`fileset`: A `params_tests_fileset`.

`file_index`: Index of file in fileset.

**Returns:**

`a_trace`: A trace object.

**See also:** [trace](#) (p. 316), [params\\_tests\\_fileset](#) (p. 157)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/09/13

---

#### A.24.10 Method `params_tests_fileset/trace_profile`

**Summary:** Loads a raw trace\_profile given a `file_index` to this fileset.

**Usage:**

```
a_trace_profile = trace_profile(fileset, file_index)
```

**Parameters:**

`fileset`: A `params_tests_fileset`.

`file_index`: Index of file in fileset.

**Returns:**

`a_trace_profile`: A trace\_profile object.

**See also:** [trace\\_profile](#) (p. 337), [params\\_tests\\_fileset](#) (p. 157)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/09/13

---

## A.25 Class `params_tests_profile`

### A.25.1 Constructor `params_tests_profile/params_tests_profile`

**Summary:** Holds the results profile from a `params_tests_db`.

**Usage:**

```
a_pt_profile = params_tests_profile(results, a_db, props)
```

**Parameters:**

`a_db`: A `params_tests_db` object.

`results`: A structure containing test results.

`props`: A structure with any optional properties.

**Returns a structure object with the following fields:**

`results_profile`: Contains results of tests. `db`: The `params_tests_db`. `props`.

**See also:** [results\\_profile](#) (p. 206), [params\\_tests\\_db/params\\_tests\\_profile](#) (p. ??)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/10/13

---

### A.25.2 Method `params_tests_profile/get`

**Summary:** Defines generic attribute retrieval for objects.

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/09/14

---

## A.26 Class `period`

### A.26.1 Constructor `period/period`

**Summary:** Start and end times of a period in terms of the `dt` of the trace to which belongs.

**Usage:**

```
obj = period(start_time, end_time, dt)
```

**Parameters:**

`start_time`, `end_time`: Inclusive period [`dt`]. If `end_time` is missing and `start_time` has two values, the second one is used as `end_time`.

`dt`: If provided, interpret `start_time` and `end_time` in seconds and convert them using this `dt`.

**Returns a structure object with the following fields:**

start\_time, end\_time.

**See also:** [trace](#) (p. 316), [spikes](#) (p. 227), [spike\\_shape](#) (p. 215)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/07/30

---

#### A.26.2 Method `period/array`

**Summary:** Converts the period to an index array.

**Usage:**

```
an_array = array(period)
```

**Parameters:**

period: A period object

**Returns:**

an\_array: An array of dt indices contained within the period.

**See also:** [period](#) (p. 162), [trace](#) (p. 316)

**Author:** Cengiz Gunay [jcengique@users.sf.net](mailto:jcengique@users.sf.net), 2010/03/29

---

#### A.26.3 Method `period/char`

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/08/04

---

#### A.26.4 Method `period/display`

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/08/04

---

#### A.26.5 Method `period/get`

**Summary:** Defines generic attribute retrieval for objects.

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/09/14

---

#### A.26.6 Method `period/set`

**Summary:** Generic method for setting object attributes.

**Author:** Cengiz Gunay `cgunay@emory.edu`, 2004/10/08

---

#### A.26.7 Method `period/SpikeTimesinPeriod`

**Usage:**

```
SpkTimes=Interval(times, period)
```

**Parameters:**

`times`: an array of spike times.

`period`: A period object

**Returns:**

`the_period`: The cropped set of spike times that fall within a period.

**See also:** [period](#) (p. 162), [cip\\_trace](#) (p. 56), [trace](#) (p. 316), [spikes](#) (p. 227)

**Author:** Tom Sangrey, 2006/01/26

---

#### A.26.8 Method `period/subsref`

**Summary:** Defines generic indexing for objects.

---

### A.27 Class `physiol_bundle`

#### A.27.1 Constructor `physiol_bundle/physiol_bundle`

**Summary:** The physiology dataset and the DB created from it bundled together.

**Usage:**

```
a_bundle = physiol_bundle(a_cell, props)
```

**Description:** This is a subclass of `dataset_db_bundle`, specialized for physiology datasets.

**Parameters:**

`a_cell`: A cell array that contains the following elements:

`a_dataset`: A cell-enclosed `physiol_cip_traceset_fileset` object.

`a_db`: The raw `params_tests_db` object created from the dataset.

It only needs to have the `pAcip`, `pAbias`, `TracesetIndex`, and `ItemIndex` columns.

**a\_joined\_db:** The one-treatment-per-line DB created from the raw DB.

**props:** A structure with any optional properties.

**controlDB:** Use this as the control DB rather than computing.

**Returns a structure object with the following fields:**

**dataset\_db\_bundle, joined\_control\_db:** DB of control neurons (no pharmacological applications).

**See also:** [dataset\\_db\\_bundle](#) (p. 85), [tests\\_db](#) (p. 255), [params\\_tests\\_dataset](#) (p. 131)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2005/12/13

---

### A.27.2 Method `physiol_bundle/bestMatchAllNeurons`

**Summary:** Finds the best match among given database for each physiology neuron.

**Usage:**

```
all_ranks_db = bestMatchAllNeurons(p_bundle, joined_db, props)
```

**Description:** Returns a database of best matching entries from `joined_db` for each entry in `p_bundle.joined_control_db`.

**Parameters:**

**p\_bundle:** A `physiol_bundle` object.

**joined\_db:** A database with neuron representations to rank against neurons.

**props:** A structure with any optional properties.  
(passed to `rankMatching`)

**Returns:**

**all\_ranks\_db:** DB of best matching from `joined_db`. Each row corresponds to `p_bundle.joined_control_db` rows.

**Example:**

```
>> all_ranks_db = ...
bestMatchAllNeurons(constrainedMeasuresPreset(pbundle2, 6), mbundle_maxcond.joined_db)
>> plotXRows(all_ranks_db, 'Distance', 'maxcond DB distance per neuron', 'maxcond', ...
struct('LineStyle', '-', 'quiet', 1, 'PaperPosition', [0 0 4 3]))
```

**See also:** [tests\\_db/rankMatching](#) (p. 299), [tests\\_db/matchingRow](#) (p. 280)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2007/05/24

---

### A.27.3 Method `physiol_bundle/constrainedMeasuresPreset`

**Summary:** Returns a `physiol_bundle` with constrained measures according to chosen preset.

**Usage:**

```
[a_bundle test_names] = constrainedMeasuresPreset(a_bundle, preset, props)
```

**Parameters:**

`a_bundle`: A `physiol_cip_traceset_fileset` object.

`preset`: Choose preset measure list (default=1).

`props`: A structure with any optional properties.

**Returns:**

`a_bundle`: One or more `cip_trace` object that holds the raw data.

**See also:** [loadItemProfile](#) (p. ??), [physiol\\_cip\\_traceset/cip\\_trace](#) (p. 172)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2006/01/19

---

### A.27.4 Method `physiol_bundle/ctFromRows`

**Summary:** Loads a `cip_trace` object from a raw data file in the `a_bundle`.

**Usage:**

```
a_cip_trace = ctFromRows(a_bundle, a_db|traceset_idx, cip_levels, props)
```

**Parameters:**

`a_bundle`: A `physiol_cip_traceset_fileset` object.

`a_db`: A DB created by this fileset to read the traceset indices from.

`traceset_idx`: A column vector with traceset indices.

`cip_levels`: A column vector of CIP-levels to be loaded.

`props`: A structure with any optional properties.

`traces`: column vector of trace indices to load.

`showParamsList`: Cell array of params or treatments to include in the id field.

**Returns:**

`a_cip_trace`: One or more `cip_trace` object that holds the raw data.

**See also:** [loadItemProfile](#) (p. ??), [physiol\\_cip\\_traceset/cip\\_trace](#) (p. 172)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2005/07/13

---

**A.27.5 Method** `physiol_bundle/get`

**Summary:** Defines generic attribute retrieval for objects.

**Author:** Cengiz Gunay `jcgunay@emory.edu`, 2004/09/14

---

**A.27.6 Method** `physiol_bundle/getNeuronLabel`

**Summary:** Constructs the neuron label from dataset.

**Usage:**

```
a_label = getNeuronLabel(a_bundle, traceset_index, props)
```

**Parameters:**

`a_bundle`: A `physiol_cip_traceset_fileset` object.  
`traceset_index`: The traceset index of neuron.  
`props`: A structure with any optional properties.

**Returns:**

`a_label`: A string label identifying selected neuron in bundle.

**See also:** [dataset\\_db.bundle](#) (p. 85)

**Author:** Cengiz Gunay `jcgunay@emory.edu`, 2006/05/05

---

**A.27.7 Method** `physiol_bundle/getNeuronRowIndex`

**Summary:** Returns the neuron index from bundle.

**Usage:**

```
a_row_index = getNeuronRowIndex(a_bundle, traceset_index, props)
```

**Parameters:**

`a_bundle`: A `physiol_bundle` object.  
`traceset_index`: The `TracesetIndex` number of neuron, or a DB row containing this.  
`props`: A structure with any optional properties.

**Returns:**

`a_row_index`: A row index of neuron in `a_bundle.joined_db`.

**See also:** [dataset\\_db.bundle/getNeuronRowIndex](#) (p. 88)

**Author:** Cengiz Gunay `jcgunay@emory.edu`, 2006/06/09

---

### A.27.8 Method `physiol_bundle/matchingControlNeuron`

**Summary:** Creates a criterion database for matching the neuron at `traceset_index`.

**Usage:**

```
a_crit_bundle = matchingControlNeuron(a_bundle, neuron_id, props)
```

**Description:** Copies selected test values from row as the first row into the criterion db.  
Adds a second row for the STD of each column in the db.

**Parameters:**

`a_bundle`: A `physiol_bundle` object.

`neuron_id`: A `NeuronId` of the neuron to match.

`props`: A structure with any optional properties.

**Returns:**

`a_crit_bundle`: A `tests_db` with two rows for values and STDs.

**Example:**

```
Matches gpd0421c from cip_traces_all_axoclamp.txt:  
>> a_crit_bundle = matchingControlNeuron(pbundle, 33)  
(see example in matchingRow)
```

**See also:** [rankMatching](#) (p. ??), [tests\\_db](#) (p. 255), [tests2cols](#) (p. ??)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2005/12/21

---

### A.27.9 Method `physiol_bundle/matchingRow`

**Summary:** Creates a criterion database for matching the neuron at `traceset_index`.

**Usage:**

```
a_crit_db = matchingRow(p_bundle, traceset_index, props)
```

**Description:** Copies selected test values from row as the first row into the criterion db.  
Adds a second row for the STD of each column in the db.

**Parameters:**

`p_bundle`: A `physiol_bundle` object.

`traceset_index`: A `TracesetIndex` of the neuron and treatments to match.

`props`: A structure with any optional properties.

**Returns:**

`a_crit_db`: A `tests_db` with two rows for values and STDs.

### Example:

```
physiol_bundle has an overloaded matchingRow method that
takes the TracesetIndex as argument:
>> a_crit_bundle = matchingRow(pbundle, 61)
>> a_ranked_bundle = rankMatching(mbundle, a_crit_bundle);
>> printTeXFile(comparisonReport(a_ranked_bundle), 'my_report.tex')
```

**See also:** [rankMatching](#) (p. ??), [tests.db/matchingRow](#) (p. 280)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2005/12/21

---

### A.27.10 Method `physiol_bundle/mergeBundles`

**Summary:** Merges two bundles together by adding `w_bundle` to `p_bundle`.

#### Usage:

```
p_bundle = mergeBundles(p_bundle, w_bundle, props)
```

#### Parameters:

`p_bundle`, `w_bundle`: `physiol_bundle` objects.  
`props`: A structure with any optional properties.

#### Returns:

`p_bundle`: The merged `p_bundle`.

#### Example:

```
>> p_bundle = mergeBundles(pbundle, another_bundle)
```

**See also:** [rankMatching](#) (p. ??), [tests.db/mergeBundles](#) (p. ??)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2008/05/18

---

### A.27.11 Method `physiol_bundle/plotfICurveStats`

**Summary:** Generates a f-I curve mean-std plot of physiology DB.

#### Usage:

```
a_plot = plotfICurveStats(p_bundle, title_str, props)
```

#### Parameters:

`p_bundle`: A `physiol_bundle` object.  
`title_str`: (Optional) String to append to plot title.  
`props`: A structure with any optional properties.

**quiet:** if given, no title is produced  
(passed to `plot_superpose`)

**Returns:**

`a_plot`: An f-I curve plot.

**Example:**

```
>> plotFigure(plotfICurveStats(pbundle));
```

**See also:** [dataset\\_db.bundle/plotfICurve](#) (p. 89), [plot\\_abstract](#) (p. 180), [plot\\_superpose](#) (p. 196)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2006/06/16

---

**A.27.12 Method** `physiol_bundle/set`

**Summary:** Generic method for setting object attributes.

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/10/08

---

**A.28 Class** `physiol_cip_traceset`

**A.28.1 Constructor** `physiol_cip_traceset/physiol_cip_traceset`

**Summary:** Dataset of cip traces from same PCDX file.

**Usage:**

```
obj = physiol_cip_traceset(trace_str, data_src, chaninfo, dt, dy, treatments, neuron_id, props);
```

**Description:** This is a subclass of `params_tests_dataset`. Each trace varies in bias, pulse times and cip magnitude.

**Parameters:**

**trace\_str:** Trace list in the format for `loadtraces` or just a Matlab vector.

**data\_src:** Absolute path of PCDX data source.

**chaninfo:** 4-element array containing `vchan`, `ichan`, `vgain`, `igain`

**vchan, ichan:** Current and voltage channels.

**vgain, igain:** External gain factors for voltage channel and current channel (`vgain` does NOT include the 10X amplification from the Axoclamp, so `vgain = 1` would mean no additional amplification beyond the 10X.)

**dt:** Time resolution [s].

**dy:** Y-axis resolution [V] or [A].

**treatments:** Structure containing the names and concentrations of compounds.

**neuron\_id:** Neuron name.

**props:** A structure with any optional properties.

**nsHDF5:** For NeuroSAGE HDF5 files, processing is faster if the output of `ns_open_file` is given here. Must be defined to allow special NeuroSAGE processing.

**profile\_method\_name:** Use this `cip_trace` method to return a profile (Default: `'getProfileAllSpikes'`).

**cip\_list:** Vector of `cip` levels to which the current trace will be matched. (All other props are passed to `cip_trace` objects)

**Returns a structure object with the following fields:**

`params_tests_dataset`, `data_src`, `ichan`, `vchan`, `vgain`, `igain`, `treatments`.

**See also:** [`cip\_traces`](#) (p. ??), [`params\_tests\_dataset`](#) (p. 131), [`params\_tests\_db`](#) (p. 138)

**Author:** Cengiz Gunay [cgunay@emory.edu](mailto:cgunay@emory.edu), and Thomas Sangrey, 2005/01/17

---

### A.28.2 Method `physiol_cip_traceset/CIPform`

**Summary:** Extracts current bias and pulse information from the current channel.

**Usage:**

```
[ciptype, on, off, finish, bias, pulse] = ns.CIPform(traceset,trace_index)
```

**Parameters:**

**traceset:** A `physiol_cip_traceset` object.

**trace\_index:** Index of item in `traceset`

**See also:** [`cip\_traces`](#) (p. ??), [`params\_tests\_dataset`](#) (p. 131), [`params\_tests\_db`](#) (p. 138)

**Author:** Thomas Sangrey, 2005

---

### A.28.3 Method `physiol_cip_traceset/cip_trace`

**Summary:** Loads a `cip_trace` object from a raw data file in the traceset.

**Usage:**

```
a_cip_trace = cip_trace(traceset, trace_index, props)
```

**Parameters:**

`traceset`: A `physiol_cip_traceset` object.

`trace_index`: Index of file in traceset.

`props`: A structure with any optional properties.

`showParamsList`: Cell array of params to add to id field.

`showName`: Show the name of the cell in the id field (default=1).

`TracesetIndex`: Indicates in the id field.

**Returns:**

`a_cip_trace`: A `cip_trace` object that holds the raw data.

**See also:** `itemResultsRow` (p. ??), `params_tests_fileset` (p. 157), `paramNames` (p. ??), `testNames` (p. ??)

**Author:** Cengiz Gunay `jcgunay@emory.edu`, 2005/07/13

---

### A.28.4 Method `physiol_cip_traceset/cip_trace_profile`

**Summary:** Loads a `cip_trace_profile` object from a raw data file in the traceset.

**Usage:**

```
a_profile = cip_trace_profile(traceset, trace_index)
```

**Parameters:**

`traceset`: A `physiol_cip_traceset` object.

`trace_index`: Index of file in traceset.

**Returns:**

`a_profile`: A profile object that implements the `getResults` method.

**See also:** `itemResultsRow` (p. ??), `params_tests_fileset` (p. 157), `paramNames` (p. ??), `testNames` (p. ??)

**Author:** Cengiz Gunay `jcgunay@emory.edu` and Thomas Sangrey, 2005/01/18

---

**A.28.5 Method** `physiol_cip_traceset/get`

**Summary:** Defines generic attribute retrieval for objects.

**Author:** Cengiz Gunay `jcgunay@emory.edu`, 2004/09/14

---

**A.28.6 Method** `physiol_cip_traceset/getItemParams`

**Summary:** Get the parameter values of a dataset item.

**Usage:**

```
params_row = getItemParams(dataset, index, a_profile)
```

**Parameters:**

**dataset:** A `params_tests_dataset`.

**index:** Index of item in dataset.

**a\_profile:** `cip_trace_profile` object

**Returns:**

`params_row`: Parameter values in the same order of `paramNames`

**See also:** `itemResultsRow` (p. ??), `params_tests_dataset` (p. 131), `paramNames` (p. ??), `testNames` (p. ??)

**Author:** Cengiz Gunay `jcgunay@emory.edu`, 2004/12/06

---

**A.28.7 Method** `physiol_cip_traceset/itemResultsRow`

**Summary:** Processes a raw data file from the dataset and return its parameter and test values.

**Usage:**

```
[params_row, tests_row] = itemResultsRow(dataset, index)
```

**Description:** This method is designed to be reused from subclasses as long as the `loadItemProfile` method is properly overloaded. Adds an `Index` column to the DB to keep track of raw data items after shuffling.

**Parameters:**

**dataset:** A `params_tests_dataset`.

**index:** Index of file in dataset.

**Returns:**

params\_row: Parameter values in the same order of paramNames  
tests\_row: Test values in the same order with testNames

**See also:** [loadItemProfile](#) (p. ??), [params\\_tests\\_dataset](#) (p. 131), [paramNames](#) (p. ??), [testNames](#) (p. ??)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2004/09/10

---

**A.28.8 Method** `physiol_cip_traceset/loadItemProfile`

**Summary:** Loads a cip\_trace\_profile object from a raw data file in the traceset.

**Usage:**

```
a_profile = loadItemProfile(traceset, trace_index)
```

**Parameters:**

traceset: A `physiol_cip_traceset` object.  
trace\_index: Index of file in traceset.

**Returns:**

a\_profile: A profile object that implements the `getResults` method.

**See also:** [itemResultsRow](#) (p. ??), [params\\_tests\\_fileset](#) (p. 157), [paramNames](#) (p. ??), [testNames](#) (p. ??)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2004/09/14

---

**A.28.9 Method** `physiol_cip_traceset/paramNames`

**Summary:** Returns the parameter names for this traceset.

**Usage:**

```
param_names = paramNames(traceset)
```

**Description:** Looks at the filename of the first file to find the parameter names.

**Parameters:**

traceset: A `params_tests_dataset`.

**Returns:**

param\_names: Cell array with ordered parameter names.

**See also:** [params\\_tests\\_dataset](#) (p. 131), [paramNames](#) (p. ??), [testNames](#) (p. ??)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2004/12/06

---

**A.28.10 Method** `physiol_cip_traceset/set`

**Summary:** Generic method for setting object attributes.

**Author:** Cengiz Gunay `jcgunay@emory.edu`, 2004/10/08

---

**A.28.11 Method** `physiol_cip_traceset/setProp`

**Summary:** Generic method for setting optional object properties.

**Usage:**

```
obj = setProp(obj, prop1, val1, prop2, val2, ...)
```

**Description:** Modifies or adds property values. As many property name-value pairs can be specified.

**Parameters:**

`obj`: Any object that has a `props` field.

`attr`: Property name

`val`: Property value.

**Returns:**

`obj`: The new object with the updated properties.

**See also:**

**Author:** Cengiz Gunay `jcgunay@emory.edu`, 2004/11/22

---

**A.29 Class** `physiol_cip_traceset_fileset`

**A.29.1 Constructor** `physiol_cip_traceset_fileset/physiol_cip_traceset_fileset`

**Summary:** Physiological fileset of traceset objects (concatenated).

**Usage:**

```
obj = physiol_cip_traceset_fileset(traceset_items, dt, dy, props)
```

**Description:** This is a subclass of `params_tests_dataset`. It contains a set of `physiol_cip_traceset` items that are tied to physical data sources. Each traceset can load a set of traces for an experimental recording. Most flexible usage is obtained when the input `traceset_items` is given as a cell array of `physiol_cip_traceset` objects. These objects can each link to PCDX or NeuroSAGE HDF5 files independent of each other. A regular Matlab script can be used to create such a cell array. If a function is defined to return such an array, it can be passed as `traceset_items`. Alternatively, the cell array can be constructed from an ASCII file as described below, such as for deprecated PCDX data files.

### Parameters:

**traceset\_items:** It can be a function handle, cell array or filename string. Function should return a cell array of `physiol_cip_traceset` items. Alternatively a preconstructed cell array can be provided directly. If it is an ASCII filename, then it should contain the following tab-delimited items: 1. Neuron ID (name to associate with the neuron). If left blank, use the filename with the '.all' extension removed. 2. The absolute path of the data file 3. The trace numbers to load, space-delimited (e.g. 1-21 24 26 27) 4. Vchan: voltage channel number 5. Ichan: current channel number 6. Vgain: external gain on voltage channel IN ADDITION to the 10X that automatically comes from the Axoclamp 2B. 7. Igain: external gain on current channel. 8. Pairs of condition names and molar concentrations in any order e.g.: TTX 1e-8 apamin 2e-7 picrotoxin 1e-4

### Returns a structure object with the following fields:

**neuron\_idx:** A structure that points from neuron names to NeuronId numbers.  
**params\_tests\_dataset**

**See also:** [physiol\\_cip\\_traceset](#) (p. 170), [params\\_tests\\_dataset](#) (p. 131), [params\\_tests\\_db](#) (p. 138)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), and Thomas Sangrey, 2005/01/17

---

### A.29.2 Method `physiol_cip_traceset_fileset/cip_trace`

**Summary:** Loads a `cip_trace` object from a raw data file in the fileset.

### Parameters:

**fileset:** A `physiol_cip_traceset_fileset` object.  
**traceset\_index:** Index of traceset item in this fileset (corresponds to row in `cells_filename`) to find the cell information.  
**trace\_index:** Index of item in the traceset.  
**a\_db:** A DB created by this fileset to read the traceset and item indices from.  
**props:** A structure with any optional properties, passed to `physiol_cip_traceset/cip_trace`.

### Returns:

**a\_cip\_trace:** One or more `cip_trace` object that holds the raw data.

**See also:** [loadItemProfile](#) (p. ??), [physiol\\_cip\\_traceset/cip\\_trace](#) (p. 172)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2005/07/13

---

**A.29.3 Method** `physiol_cip_traceset_fileset/display`

**Author:** Cengiz Gunay `jcgunay@emory.edu`, 2004/08/04

---

**A.29.4 Method** `physiol_cip_traceset_fileset/get`

**Summary:** Defines generic attribute retrieval for objects.

**Author:** Cengiz Gunay `jcgunay@emory.edu`, 2004/09/14

---

**A.29.5 Method** `physiol_cip_traceset_fileset/loadItemProfile`

**Summary:** Loads a `cip_trace_profile` object from a raw data file in the fileset.

**Usage:**

```
a_profile = loadItemProfile(fileset, traceset_index, trace_index)
```

**Parameters:**

`fileset`: A `physiol_cip_traceset` object.

`traceset_index` : Index of traceset item in this fileset (corresponds to row in `cells_filename`) to use grab the cell information.

`trace_index`: Index of item in the traceset.

**Returns:**

`a_profile`: A profile object that implements the `getResults` method.

**See also:** `itemResultsRow` (p. ??), `params_tests_fileset` (p. 157), `paramNames` (p. ??), `testNames` (p. ??)

**Author:** Cengiz Gunay `jcgunay@emory.edu`, 2004/09/14 and Tom Sangrey

---

**A.29.6 Method** `physiol_cip_traceset_fileset/mergeFilesets`

**Summary:** Concatenates two `physiol_cip_traceset_fileset` objects.

**Usage:**

```
[a_fileset, traceset_offset, neuron_id_offset] = mergeFilesets(a_fileset, w_fileset)
```

**Description:** Concatenates the list contents, and combines the `neuron_idx` structures. The properties such as `dt`, `dy` and `props` are retained from first object.

**Parameters:**

**a\_fileset, w\_fileset:** Two `physiol_cip_traceset_fileset` objects without overlapping `neuron_id` items.

**Returns:**

**a\_fileset:** The new object with combined contents.

**See also:** [physiol\\_cip\\_traceset\\_fileset](#) (p. 175)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2008/05/18

---

### A.29.7 Method `physiol_cip_traceset_fileset/neuronNameFromId`

**Summary:** Returns string neuron names from a list of neuron ids.

**Usage:**

```
name_strs = neuronNameFromId(fileset, neuron_ids)
```

**Parameters:**

**fileset:** A `physiol_cip_traceset_fileset` object.

**neuron\_ids:** One or more neuron ids in a vector.

**Returns:**

**name\_strs:** Cell array of neuron names corresponding to the ids given.

**See also:** [physiol\\_cip\\_traceset\\_fileset](#) (p. 175)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2007/11/16

---

### A.29.8 Method `physiol_cip_traceset_fileset/physiol_bundle`

**Summary:** Loads the database and then creates the `physiol_bundle` object.

**Usage:**

```
a_bundle = physiol_bundle(fileset, props)
```

**Description:** Calls `params_tests_db` to get the db, and then calls `tests_db/physiol_bundle` to do transformations.

**Parameters:**

**fileset:** A `physiol_cip_traceset_fileset` object.

**props:** A structure with any optional properties.  
(Passed to `tests_db/physiol_bundle`)

**Returns:**

a\_physiol\_bundle: One or more `physiol_bundle` object that holds the raw data.

**See also:** [tests\\_db/physiol\\_bundle](#) (p. 285)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2007/12/21

---

**A.29.9 Method** `physiol_cip_traceset_fileset/readDBItems`

**Summary:** Reads all items to generate a `params_tests_db` object.

**Usage:**

```
[params, param_names, tests, test_names] = readDBItems(obj, items)
```

**Description:** This is a specific method to convert from `physiol_cip_traceset_fileset` to a `params_tests_db`, or a subclass. Outputs of this function can be directly fed to the constructor of a `params_tests_db` or a subclass.

**Parameters:**

obj: A `physiol_cip_traceset_fileset`

items: (Optional) List of item indices to use to create the db.

**Returns:**

params, param\_names, tests, test\_names: See `params_tests_db`.

**See also:** [params\\_tests\\_db](#) (p. 138), [params\\_tests\\_fileset](#) (p. 157), [itemResultsRow](#) (p. ??)

---

**A.29.10 Method** `physiol_cip_traceset_fileset/set`

**Summary:** Generic method for setting object attributes.

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/10/08

---

**A.29.11 Method** `physiol_cip_traceset_fileset/setProp`

**Summary:** Generic method for setting optional object properties.

**Usage:**

```
obj = setProp(obj, prop1, val1, prop2, val2, ...)
```

**Description:** Modifies or adds property values. As many property name-value pairs can be specified.

**Parameters:**

obj: Any object that has a props field.  
attr: Property name  
val: Property value.

**Returns:**

obj: The new object with the updated properties.

**See also:**

**Author:** Cengiz Gunay (cgunay@emory.edu), 2004/11/22

---

**A.29.12 Method** `physiol_cip_traceset_fileset/vertcat`

**Summary:** Concatenates multiple `physiol_cip_traceset_fileset` objects.

**Usage:**

```
obj = vertcat(obj, obj2)
```

**Description:** Concatenates the list contents, and combines the `neuron_idx` structures.  
The properties such as `dt`, `dy` and `props` are retained from first object.

**Parameters:**

obj, obj2: Two `physiol_cip_traceset_fileset` objects without overlapping `neuron_id` items.

**Returns:**

obj: The new object with combined contents.

**See also:** [physiol\\_cip\\_traceset\\_fileset](#) (p. 175)

**Author:** Cengiz Gunay (cgunay@emory.edu), 2008/01/13

---

**A.30 Class** `plot_abstract`**A.30.1 Constructor** `plot_abstract/plot_abstract`

**Summary:** A plot that can be directly visualized or included in subplots.

**Usage:**

```
obj = plot_abstract(data, axis_labels, title, legend, command, props)
```

**Description:** Base class that holds the necessary data to draw a plot. This data can then be used to generate different plots. Subclasses define specific plots with additional data. Subclasses should conform to the standard that the series of commands found in `plotFigure` should produce a valid figure.

**Parameters:**

**data:** A cell array of data arrays (x, y, z, etc.) that can be fed to plot commands.

**axis\_labels:** Cell array of axis label strings.

**title:** Plot description string.

**legend:** Cell array of descriptions for each item plotted.

**command:** Plotting command to use (Optional, default='plot')

**props:** A structure with any optional properties.

- axisLimits:** Sets axis limits of non-NaN values in vector.
- tightLimits:** If 1, issues an "axis tight" command (default=0)
- border:** Relative size of border spacing around axis, between 0 - 1. (default=0)  
If a scalar, equal border on all sides, give a four-element vector [left bottom right top] to define borders for each side.
- colormap:** Figure colormap passed to the colormap function. If function handle, its output is passed instead.
- grid:** Display dashed grid in background.
- noXLabel:** No X-axis label.
- noYLabel:** No Y-axis label.
- noTitle:** No title.
- rotateXLabel:** Rotates the X-axis label for smaller width.
- rotateYLabel:** Rotates the Y-axis label for smaller width.
- numXTicks:** Number of ticks on X-axis.
- formatXTickLabels:** The sprintf format string for tick labels.
- XTick, YTick:** Point locations for axis ticks.
- XTickLabel, YTickLabel:** Axis tick labels.
- ColorOrder:** Set the ColorOrder of the axis.
- LineStyleOrder:** Set the LineStyleOrder of the axis.
- legendLocation:** Passed to legend(..., 'location', legendLocation).
- legendOrientation:** Passed to legend(..., 'orientation', legendLocation).
- noLegends:** If exists, no legends are displayed.
- axisProps:** Passed to set properties of the axis drawn.
- plotProps:** Passed to set properties of the plot drawn.
- figureProps:** Passed to set properties of the figure drawn.
- PaperPosition:** Sets the figure property for printing at this size.

**resizeControl:** If 0, drawing after resize is disabled and prints at screen size, if 1 (default), redraws figure after each resize event and prints at PaperPosition size.

**fixedSize:** Vector of width and height in inches passed to PaperPosition property. Implies `resizeControl=0`.

**Returns a structure object with the following fields:**

`data`, `axis.labels`, `title`, `legend`, `command`, `props`

**See also:** [plot\\_abstract/plot](#) (p. 184), [plot\\_abstract/plotFigure](#) (p. 185)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/09/22

---

### A.30.2 Method `plot_abstract/axis`

**Summary:** Returns the estimated axis ranges of this plot according to its data.

**Usage:**

```
ranges = axis(a_plot)
```

**Parameters:**

`a_plot`: A `plot_abstract` object, or a subclass object.

**Returns:**

`ranges`: The ranges as a vector in the same way `'axis'` would return.

**See also:** [plot\\_abstract](#) (p. 180), [plot\\_abstract/plot](#) (p. 184)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/10/13

---

### A.30.3 Method `plot_abstract/decorate`

**Summary:** Places decorations (titles, labels, ticks, etc.) on the plot.

**Usage:**

```
handles = decorate(a_plot, plot_handles)
```

**Parameters:**

`a_plot`: A `plot_abstract` object, or a subclass object.

`plot_handles`: Handles of plots already drawn (structure returned by `plot_abstract/plot`).

**Returns:**

`handles`: Structure with handles of all graphical objects drawn.

**See also:** [plot\\_abstract](#) (p. 180), [plot\\_abstract/plot](#) (p. 184)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/09/22

---

#### A.30.4 Method `plot_abstract/display`

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/08/04

---

#### A.30.5 Method `plot_abstract/get`

**Summary:** Defines generic attribute retrieval for objects.

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/09/14

---

#### A.30.6 Method `plot_abstract/matrixPlots`

**Summary:** Organize multiple plots in a matrix formation.

**Usage:**

```
a_plot = matrixPlots(plots, axis_labels, title_str, props)
```

**Parameters:**

**plots:** Array of `plot_abstract` or subclass objects.

**axis\_labels:** Cell array of axis label strings (optional, taken from plots).

**title\_str:** Plot description string (optional, taken from plots).

**props:** A structure with any optional properties passed to the Y stack\_plot.

- titlesPos, yLabelsPos, yTicksPos:** if specified, passed to the X stack\_plots.
- rotateYLabel:** if specified, passed to the X stack\_plots.
- axisLimits:** if specified, passed to the X stack\_plots.
- goldratio:** try to make the figure in this aspect ratio.
- width, height:** if specified, make the figure have this many plots in corresponding dimension.

**Returns:**

**a\_plot:** A `plot_abstract` object.

**See also:** [plot\\_abstract](#) (p. 180), [plot\\_abstract/plot](#) (p. 184), [plot\\_abstract/plotFigure](#) (p. 185)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/12/07

---

### A.30.7 Method `plot_abstract/openAxis`

**Summary:** Calculates the extents for the axis of this plot and opens it.

**Usage:**

```
[axis_handle, layout_axis] = openAxis(a_plot, layout_axis)
```

**Parameters:**

`a_plot`: A `plot_abstract` object, or a subclass object.

`layout_axis`: The axis position to layout this plot (Optional).

If NaN, doesn't open a new axis.

**Returns:**

`handles`: Handles of graphical objects drawn.

**See also:** [plot\\_abstract](#) (p. 180)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/09/22

---

### A.30.8 Method `plot_abstract/plot`

**Summary:** Draws this plot in the current axis.

**Usage:**

```
handles = plot(a_plot, layout_axis)
```

**Parameters:**

`a_plot`: A `plot_abstract` object, or a subclass object.

`layout_axis`: The axis position to layout this plot (Optional).

If NaN, doesn't open a new axis.

**Returns:**

`handles`: Handles of graphical objects drawn.

**See also:** [plot\\_abstract](#) (p. 180)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/09/22

---

### A.30.9 Method `plot_abstract/plotFigure`

**Summary:** Draws this plot alone in a new figure window.

**Usage:**

```
[handle, plot_handles] = plotFigure(a_plot, title_str, props)
```

**Parameters:**

**a\_plot:** A `plot_abstract` object, or a subclass object.  
**title\_str:** (Optional) String to append to plot title.  
**props:** A structure with any optional properties.  
**figureHandle:** Use this figure instead of opening a new one.  
**delayOpen:** Wait this many seconds for figure to materialize  
(0.5s is good workaround for Compiz-fusion bug)

**Returns:**

**handle:** Handle of new figure. **plot\_handles:** Structure with all plotted data and decorations.

**See also:** [plot\\_abstract](#) (p. 180), [plot\\_abstract/plot](#) (p. 184), [plot\\_abstract/decorate](#) (p. 182)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/09/22

---

### A.30.10 Method `plot_abstract/set`

**Summary:** Generic method for setting object attributes.

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/10/08

---

### A.30.11 Method `plot_abstract/setProp`

**Summary:** Generic method for setting optional object properties.

**Usage:**

```
obj = setProp(obj, prop1, val1, prop2, val2, ...)
```

**Description:** Modifies or adds property values. As many property name-value pairs can be specified.

**Parameters:**

**obj:** Any object that has a `props` field.  
**attr:** Property name

val: Property value.

**Returns:**

obj: The new object with the updated properties.

**See also:**

**Author:** Cengiz Gunay jcgunay@emory.edu, 2004/11/22

---

**A.30.12 Method** `plot_abstract/subsasgn`

**Summary:** Defines generic index-based assignment for objects.

**Author:** Cengiz Gunay jcgunay@emory.edu, 2006/02/06

---

**A.30.13 Method** `plot_abstract/subsref`

**Summary:** Defines generic indexing for objects.

---

**A.30.14 Method** `plot_abstract/superposePlots`

**Summary:** Superpose multiple plots with common command onto a single axis.

**Usage:**

```
a_plot = superposePlots(plots, axis_labels, title_str, command, props)
```

**Description:** The plot decoration will be taken from the last plot in the list, with the exception of legend labels.

**Parameters:**

**plots:** Array of `plot_abstract` or subclass objects.

**axis\_labels:** Cell array of axis label strings (optional, taken from plots).

**title\_str:** Plot description string (optional, taken from plots).

**command:** Plotting command to use (optional, taken from plots)

**props:** A structure with any optional properties.

**noLegends:** If exists, no legends are created.

**Returns:**

a\_plot: A `plot_abstract` object.

**See also:** [plot\\_abstract](#) (p. 180), [plot\\_abstract/plot](#) (p. 184), [plot\\_abstract/plotFigure](#) (p. 185)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2004/09/23

---

## A.31 Class `plot_bars`

### A.31.1 Constructor `plot_bars/plot_bars`

**Summary:** Bar plot with error lines in individual axes for each variable.

**Usage:**

```
a_plot = plot_bars(mid_vals, lo_vals, hi_vals, n_vals, x_labels, y_labels, ... title_str,
axis_limits, props)
```

**Description:** Additional rows of data will result in grouped bars in each axis. If all data is given as a column vector, then they will appear in a single axis. `plot_bars` is a subclass of `plot_stack`. The `plot_abstract/plot` command can be used to plot this data. Rows of `*_vals` will create grouped bars, columns will create new axes.

**Parameters:**

**mid\_vals:** Middle points of error bars.

**lo\_vals:** Low points of error bars as difference from `mid_vals`.

**hi\_vals:** High points of error bars as difference from `mid_vals`.

**n\_vals:** Number of samples used for the statistic (Optional).

**x\_labels, y\_labels:** Axis labels for each bar group. Must match with data columns.

**title\_str:** Plot description.

**axis\_limits:** If given, all plots contained will have these axis limits.

**props:** A structure with any optional properties.

**dispBarsLines:** Choose between using 'bars' or 'lines' to connect the errorbars.

**dispErrorbars:** If 1, display errorbars for `lo_vals` and `hi_vals` deviation from `mid_vals` (default=1).

**dispInnerBars:** If 1, an inner bar extends from the base to `hi_vals` (default=0). Mutually exclusive with `dispInnerBars`. It will make the larger bars blank.

**dispNvals:** If 1, display `n_vals` on top of each bar (default=1).

**groupValues:** List of within-group labels passed to `XTickLabels`, instead of just a sequence of numbers.

**groupValuesLoc:** If 1, use specified group values as the location of bars or errorbars. By default locations are set arbitrarily as 1:n.

**truncateDecDigits:** Truncate labels to this many decimal digits.

**barAxisProps:** props passed to `plot_abstract` objects with bar commands

**barWidth:** Controls spacing between bars (see `width` argument for the bar command; default=0.8).

**Returns a structure object with the following fields:**

plot\_abstract

**See also:** [plot\\_abstract](#) (p. 180), [plot\\_abstract/plot](#) (p. 184)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2004/10/07

---

#### A.31.2 Method plot\_bars/set

**Summary:** Generic method for setting object attributes.

**Author:** Cengiz Gunay jcgunay@emory.edu, 2004/10/08

---

### A.32 Class plot\_errorbar

#### A.32.1 Constructor plot\_errorbar/plot\_errorbar

**Summary:** Generic errorbar plot.

**Usage:**

```
a_plot = plot_errorbar(x_vals, mid_vals, lo_vals, hi_vals, line_spec, axis_labels, title,
legend, props)
```

**Description:** Subclass of plot\_abstract. The plot\_abstract/plot command can be used to plot this data. Needed to create this as a separate class to have the axis ranges method to measure the errorbars.

**Parameters:**

**x\_vals:** X coordinates of errorbars.  
**mid\_vals:** Middle points of error bars.  
**lo\_vals:** Low points of error bars.  
**hi\_vals:** High points of error bars.  
**line\_spec:** Plot line spec to be passed to errorbar  
**axis\_labels:** Cell array for X, Y axis labels.  
**title:** Plot description.  
**legend:** For multiple errorbar plots (matrix form), description of each plot.  
**props:** A structure with any optional properties to be passed to plot\_abstract.

**Returns a structure object with the following fields:**

plot\_abstract.

**See also:** [plot\\_abstract](#) (p. 180), [plot\\_abstract/plot](#) (p. 184)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2004/10/07

---

### A.32.2 Method `plot_errorbar/axis`

**Summary:** Returns the estimated axis ranges of this plot according to its data.

**Usage:**

```
ranges = axis(a_plot)
```

**Parameters:**

`a_plot`: A `plot_abstract` object, or a subclass object.

**Returns:**

`ranges`: The ranges as a vector in the same way `'axis'` would return.

**See also:** [plot\\_abstract](#) (p. 180), [plot\\_abstract/plot](#) (p. 184)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/10/13

---

### A.32.3 Method `plot_errorbar/get`

**Summary:** Defines generic attribute retrieval for objects.

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/09/14

---

## A.33 Class `plot_errorbars`

### A.33.1 Constructor `plot_errorbars/plot_errorbars`

**Summary:** Plots distributions of variables with errorbars in separate axes.

**Usage:**

```
a_plot = plot_errorbars(labels, mid_vals, lo_vals, hi_vals, labels, title, axis_limits, props)
```

**Description:** Subclass of `plot_stack`. The `plot_abstract/plot` command can be used to plot this data. Each of `mid_vals`, `lo_vals`, and `hi_vals` plot its rows in the same axis and columns in different axes.

**Parameters:**

`labels`: Labels of parameters to appear at bottom of each errorbar.

`mid_vals`: Middle points of error bars.

`lo_vals`: Low points of error bars.

`hi_vals`: High points of error bars.

`title`: Plot description.

`axis_limits`: If given, all plots contained will have these axis limits.

**props:** A structure with any optional properties.

**Returns a structure object with the following fields:**

plot\_abstract, labels.

**See also:** [plot\\_abstract](#) (p. 180), [plot\\_abstract/plot](#) (p. 184)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/10/07

---

## A.34 Class plot\_image

### A.34.1 Constructor plot\_image/plot\_image

**Summary:** Generic image plot.

**Usage:**

```
a_plot = plot_image(image_data, axis_labels, colorbar_label, title_str, props)
```

**Description:** Subclass of plot\_abstract. The plot\_abstract/plot command can be used to plot this data. Needed to create this as a separate class to have the axis ranges method implemented and take advantage of plot\_abstract props.

**Parameters:**

**image\_data:** 2D matrix with image data.

**axis\_labels:** Cell array for X, Y axis labels.

**colorbar\_label:** String to appear next to colorbar.

**title\_str:** Plot description.

**props:** A structure with any optional properties.

**colorbar:** If defined, show colorbar next to plot.

**numGrads:** Number of poles in the colormap gradient. If 1 (default), it will be a monocolour gradient (e.g., gray-level); if 2, it will be a dual-colour gradient (e.g., blue to red) with a black crossing point. This point is determined by the min\_value (below). Default numGrads=2, if negative values exist in image\_data after scaling.

**min\_value,max\_value:** Use these value to scale the data by (image\_data - min\_value) / (max\_value - min\_value). Otherwise, its min and max is used.

**colormap:** Colormap vector, function name or handle to colormap (e.g., 'jet').

**numColors:** Number of colors in colormap.

**NaNcolor:** Color to be used for NaN entries (default: [1 1 1])  
(Rest passed to plotImage.)

**Returns a structure object with the following fields:**

plot\_abstract.

**Example:**

```
>> plotFigure(plot_image(rand(5), 'r1', 'r2', 'rand', 'random matrix'))
```

**See also:** [plot\\_abstract](#) (p. 180), [plot\\_abstract/plot](#) (p. 184)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2008/04/15

---

#### A.34.2 Method plot\_image/axis

**Summary:** Returns the estimated axis ranges of this plot according to its data.

**Usage:**

```
ranges = axis(a_plot)
```

**Parameters:**

a\_plot: A plot\_abstract, or subclass, object.

**Returns:**

ranges: The ranges as a vector in the same way 'axis' would return.

**See also:** [plot\\_abstract](#) (p. 180), [plot\\_abstract/plot](#) (p. 184), [axis](#) (p. ??)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2004/10/13

---

#### A.34.3 Method plot\_image/get

**Summary:** Defines generic attribute retrieval for objects.

**Author:** Cengiz Gunay jcgunay@emory.edu, 2004/09/14

---

### A.35 Class plot\_inset

#### A.35.1 Constructor plot\_inset/plot\_inset

**Summary:** Superpose multiple plots with individual axis at arbitrary locations.

**Usage:**

```
a_plot = plot_inset(plots, axis_locations, title_str, props)
```

**Description:** Subclass of plot\_abstract. Contains other plot\_abstract objects or subclasses thereof to be layout in arbitrary format. Allows overlapping and therefore good for insets and special plots.

**Parameters:**

**plots:** Cell array of plot\_abstract or subclass objects.  
**axis\_locations:** Matrix of four-element vectors for each given plot.  
**title\_str:** Title to go on top of the stack  
**props:** A structure with any optional properties.  
**positioning:** axis\_locations interpreted as 'absolute' values or 'relative' to the 1st plot (default='absolute'). Relative positioning doesn't work well.

**Returns a structure object with the following fields:**

plot\_abstract, plots, axis\_locations.

**See also:** [plot\\_abstract](#) (p. 180), [plot\\_abstract/plotFigure](#) (p. 185)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2007/06/05

---

**A.35.2 Method plot\_inset/get**

**Summary:** Defines generic attribute retrieval for objects.

**Author:** Cengiz Gunay jcgunay@emory.edu, 2004/09/14

---

**A.35.3 Method plot\_inset/plot**

**Summary:** Superposes contained plots in their own axes.

**Usage:**

```
handles = plot(a_plot, layout_axis)
```

**Parameters:**

**a\_plot:** A plot\_superpose object.  
**layout\_axis:** The axis position to layout this plot (Optional).

**Returns:**

handles: Handles of graphical objects drawn.

**See also:** [plot\\_abstract](#) (p. 180)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2007/06/08

---

#### A.35.4 Method `plot_inset/set`

**Summary:** Generic method for setting object attributes.

**Author:** Cengiz Gunay `jcgunay@emory.edu`, 2004/10/08

---

### A.36 Class `plot_simple`

#### A.36.1 Constructor `plot_simple/plot_simple`

**Summary:** Abstract description of a single plot.

**Usage:**

```
a_plot = plot_simple(data_x, data_y, title, label_x, label_y, legend, command, props)
```

**Description:** Subclass of `plot_abstract`. The `plot_abstract/plot` command can be used to plot this data.

**Parameters:**

`data_x`: X-axis values for the plot.  
`data_y`: Y-axis values for the plot.  
`title`: Plot description.  
`label_x`: X-axis label string.  
`label_y`: Y-axis label string.  
`legend`: Short description of data points.  
`command`: Plotting command to use (Optional, default='plot')  
`props`: A structure with any optional properties.

**Returns a structure object with the following fields:**

`plot_abstract`.

**See also:** [plot\\_abstract](#) (p. 180), [plot\\_abstract/plot](#) (p. 184)

**Author:** Cengiz Gunay `jcgunay@emory.edu`, 2004/09/22

---

#### A.36.2 Method `plot_simple/get`

**Summary:** Defines generic attribute retrieval for objects.

**Author:** Cengiz Gunay `jcgunay@emory.edu`, 2004/09/14

---

### A.36.3 Method `plot_simple/set`

**Summary:** Generic method for setting object attributes.

**Author:** Cengiz Gunay `jcgunay@emory.edu`, 2004/10/08

---

## A.37 Class `plot_stack`

### A.37.1 Constructor `plot_stack/plot_stack`

**Summary:** A horizontal or vertical stack of plots.

**Usage:**

```
a_plot = plot_stack(plots, axis_limits, orientation, title_str, props)
```

**Description:** Subclass of `plot_abstract`. Contains other `plot_abstract` objects or subclasses thereof to be layout in stack format.

**Parameters:**

**plots:** Cell array of `plot_abstract` or subclass objects.

**axis\_limits:** If given, all plots contained will have these axis limits. In this vector, NaNs are untouched, Inf s are replaced by minimal and maximal ranges of the stacked plots.

**orientation:** Stack orientation 'x' for horizontal, 'y' for vertical, etc.

**title\_str:** Title to go on top of the stack

**props:** A structure with any optional properties.

**yLabelsPos:** 'left' means only put y-axis label to leftmost plot.

**yTicksPos:** 'left' means only put y-axis ticks to leftmost plot.

**xLabelsPos:** 'bottom' means only put x-axis label to lowest plot.

**xTicksPos:** 'bottom' means only put x-axis ticks to lowest plot.

**titlesPos:** 'top' means only put title to top plot.

**relaxedLimits:** Add 10

**relativeSizes:** An array specifying relative size of each plot with one value.

(Example: `relativeSizes=[1 2]` makes second plot twice wider than first.)

**Returns a structure object with the following fields:**

`plot_abstract`, `plots`, `axis_limits`, `orient`.

**See also:** [plot\\_abstract](#) (p. 180), [plot\\_abstract/plotFigure](#) (p. 185)

**Author:** Cengiz Gunay `jcgunay@emory.edu`, 2004/10/04

---

### A.37.2 Method `plot_stack/decorate`

**Summary:** No additional decorations for stacked plots.

**Usage:**

```
a_histogram.db = decorate(a_plot)
```

**Parameters:**

`a_plot`: A `plot_abstract` object, or a subclass object.

**Returns:**

`handles`: Handles of graphical objects drawn.

**See also:** [plot\\_abstract](#) (p. 180), [plot\\_abstract/plot](#) (p. 184)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/10/04

---

### A.37.3 Method `plot_stack/display`

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/08/04

---

### A.37.4 Method `plot_stack/get`

**Summary:** Defines generic attribute retrieval for objects.

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/09/14

---

### A.37.5 Method `plot_stack/plot`

**Summary:** Draws this plot in the current axis or at the position in `layout_axis`.

**Usage:**

```
handles = plot(a_plot, layout_axis)
```

**Parameters:**

`a_plot`: A `plot_abstract` object, or a subclass object.

`layout_axis`: The axis position to layout this plot (Optional).

**Returns:**

`handles`: Handles of graphical objects drawn.

**See also:** [plot\\_stack](#) (p. 194), [plot\\_abstract](#) (p. 180)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/10/04

---

#### A.37.6 Method `plot_stack/set`

**Summary:** Generic method for setting object attributes.

**Author:** Cengiz Gunay `jcgunay@emory.edu`, 2004/10/08

---

#### A.37.7 Method `plot_stack/superposePlots`

**Summary:** Superpose multiple `plot_stack` objects that contain exact same contents.

**Usage:**

```
a_plot = superposePlots(plots, axis_labels, title_str, command, props)
```

**Description:** The plot decoration will be taken from the last plot in the list, with the exception of legend labels.

**Parameters:**

**plots:** Array of `plot_stack` objects.

**axis\_labels:** Cell array of axis label strings (optional, taken from plots).

**title\_str:** Plot description string (optional, taken from plots).

**command:** Plotting command to use (optional, taken from plots)

**props:** A structure with any optional properties.

**noLegends:** If exists, no legends are created.

**Returns:**

**a\_plot:** A `plot_stack` object.

**See also:** [plot\\_abstract](#) (p. 180), [plot\\_abstract/plot](#) (p. 184), [plot\\_abstract/plotFigure](#) (p. 185)

**Author:** Cengiz Gunay `jcgunay@emory.edu`, 2006/06/14

---

### A.38 Class `plot_superpose`

#### A.38.1 Constructor `plot_superpose/plot_superpose`

**Summary:** Multiple `plot_abstract` objects superposed on the same axis.

**Usage:**

```
obj = plot_superpose(plots, axis_labels, title_str, props)
```

**Description:** Subclass of `plot_abstract`. Contains multiple `plot_abstract` objects to be plotted on the same axis. This is different than the `plot_abstract/superpose`, where only using the same plot command is allowed. Here, each `plot_abstract` can have its own special plotting command. Subclasses of `plot_abstract` is also allowed here. The decorations comes from this object and not children plots. This behavior is different than `plot_stack`, where each plot has its own decorations. If you want each plot to have its own axis (e.g. an inset, or plot with multiple axis labels) then you should use `plot_inset`. For convenience, the props of first plot is inherited by `plot_superpose` objects. For instance, in the example below, the `fixedSize` property is used by `plotFigure` because it's in the first subplot.

**Parameters:**

`plots`: Cell array of `plot_abstract` or subclass objects.  
`axis_labels`: Cell array of axis label strings.  
`title_str`: Plot description string.  
`props`: A structure with any optional properties (passed to `plot_abstract`).  
`noCombine`: Do not auto-combine plots with same properties (default=0). This is especially important for `plotBars`.

**Returns a structure object with the following fields:**

`plot_abstract`, `plots`

**Example:**

```
>> a_p = plot_abstract([0 0], [1 2], , ' ', , 'plot',  
struct('fixedSize', [3 2]));  
>> a_p2 = plot_abstract(...)  
>> a_p3 = plot_abstract(...)  
>> plotFigure(plot_superpose(a_p1, a_p2, a_p3))
```

**See also:** [plot\\_abstract/superpose](#) (p. ??), [plot\\_superpose/plot](#) (p. 199)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2004/09/22

---

### A.38.2 Method `plot_superpose/axis`

**Summary:** Returns the maximal axis ranges according to superposed subplots.

**Usage:**

```
ranges = axis(a_plot)
```

**Parameters:**

`a_plot`: A `plot_abstract` object, or a subclass object.

**Returns:**

ranges: The ranges as a vector in the same way 'axis' would return.

**See also:** [plot\\_abstract](#) (p. 180), [plot\\_abstract/plot](#) (p. 184)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2006/05/22

---

**A.38.3 Method** `plot_superpose/decorate`

**Summary:** Places decorations using the first plot of the superposed plots.

**Usage:**

```
handles = decorate(a_plot, plot_handles)
```

**Parameters:**

`a_plot`: A `plot_abstract` object, or a subclass object.

`plot_handles`: Handles of plots already drawn (structure returned by `plot_superpose/plot`).

**Returns:**

`handles`: Handles of graphical objects drawn.

**See also:** [plot\\_abstract](#) (p. 180), [plot\\_abstract/plot](#) (p. 184)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2005/04/11

---

**A.38.4 Method** `plot_superpose/display`

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/08/04

---

**A.38.5 Method** `plot_superpose/get`

**Summary:** Defines generic attribute retrieval for objects.

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/09/14

---

#### A.38.6 Method `plot_superpose/plot`

**Summary:** Draws this plot in the current axis.

**Usage:**

```
handles = plot(a_plot, layout_axis)
```

**Parameters:**

**a\_plot:** A `plot_superpose` object.

**layout\_axis:** The axis position to layout this plot (Optional).

**Returns:**

**handles:** Handles of graphical objects drawn.

**See also:** [plot\\_abstract](#) (p. 180)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2005/04/08

---

#### A.38.7 Method `plot_superpose/set`

**Summary:** Generic method for setting object attributes.

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/10/08

---

#### A.38.8 Method `plot_superpose/superposePlots`

**Summary:** Superpose multiple `plot_superpose` objects by merging them into one.

**Usage:**

```
a_plot = superposePlots(plots, axis_labels, title_str, command, props)
```

**Parameters:**

**plots:** Array of `plot_superpose` objects.

**axis\_labels:** Cell array of axis label strings (optional, taken from plots).

**title\_str:** Plot description string (optional, taken from plots).

**command:** Plotting command to use (optional, taken from plots)

**props:** A structure with any optional properties.

**noLegends:** If exists, no legends are created.

**Returns:**

**a\_plot:** A `plot_superpose` object.

**See also:** [plot\\_abstract/superposePlots](#) (p. 186), [plot\\_stack/superposePlots](#) (p. 196)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2006/06/14

---

## A.39 Class ranked\_db

### A.39.1 Constructor ranked\_db/ranked\_db

**Summary:** A database of distance values generated by ranking rows of orig\_db with the criterion in crit\_db.

**Usage:**

```
a_ranked_db = ranked_db(data, col_names, orig_db, crit_db, id, props)
```

**Description:** This is a subclass of tests\_db. It should contain a Distance column. A more general ranked db class may be needed later. Use the rankMatching method to get an instance of this class.

**Parameters:**

**data:** Database contents.

**col\_names:** The column names.

**orig\_db:** DB whose rows are ranked.

**crit\_db:** The criterion DB used for generating the ranking scores.

**id:** An identifying string.

**props:** A structure with any optional properties.

**tolerateNaNs:** If 0, rows with any NaN values are skipped (default=1).

**Returns a structure object with the following fields:**

tests\_db, orig\_db, crit\_db, props.

**See also:** [tests\\_db](#) (p. 255), [tests\\_db/rankMatching](#) (p. 299), [tests\\_db/matchingRow](#) (p. 280)

**Author:** Cengiz Gunay ;cgunay@emory.edu, 2004/12/21

---

### A.39.2 Method ranked\_db/blockedDistances

**Summary:** Creates a db of distances to blocked versions of top ranks.

**Usage:**

```
[a_db, ranked_dbs] = blockedDistances(a_ranked_db, rows, blocked_db, blocked_param_indices, block_levels, crit_db)
```

**Parameters:**

**a\_ranked\_db:** A ranked\_db object.

**rows:** Use the given row rankings.

**blocked\_db:** db with blocked versions of original ranks.

**blocked\_param\_indices:** Indices of parameters to be blocked.

**block\_levels:** Number of parameter levels for blocking.

**crit\_db:** Calculate distance from this criterion.

**Returns:**

**a\_db:** A tests\_db object with the matrix of distances. **ranked\_dbs:** A cell array of ranked\_dbs for each row.

**Example:**

```
>> dist_matx_db = blockedDistances(rankMatching(super_db, matchingRow(rsuper_phys_db, 20)),  
1:5, super_blocker_db, [1 2], 10, matchingRow(rsuper_phys_db, 21))
```

**See also:** [makeModifiedParamDB](#) (p. ??), [getParamRowIndices](#) (p. ??)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2005/01/14

---

### A.39.3 Method ranked\_db/displayRows

**Summary:** Displays rows of rankings together with errors associated with each measure.

**Usage:**

```
s = displayRows(db, rows, props)
```

**Parameters:**

**db:** A tests\_db object.

**rows:** Indices of rows in db.

**props:** Struct with optional properties.

**originalCols:** Column pattern to limit result of joinOriginal.

**Returns:**

**s:** A structure of column name and value pairs.

**See also:** [tests\\_db](#) (p. 255)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/09/15

---

### A.39.4 Method ranked\_db/get

**Summary:** Defines generic attribute retrieval for objects.

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/09/14

---

### A.39.5 Method `ranked_db/getDistMatrix`

**Summary:** Create a matrix of total errors from the ranked DB.

**Usage:**

```
distmatx = getDistMatrix(db, rows, col_size, props)
```

**Description:** The `col_size` parameter is used to find the number of rows that make up the x-dimension of the matrix.

**Parameters:**

**db:** A `tests_db` object.

**rows:** Indices of rows in db after joining (and sorting).

**col\_size:** Number of rows to take from DB to form the columns of matrix plot.

**props:** A structure with any optional properties.

**sortBy:** If specified, db is sorted after being joined with original using this column.

**Returns:**

**a\_plot:** A `plot_abstract` object.

**See also:** [tests\\_db](#) (p. 255), [plot\\_abstract](#) (p. 180)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2005/12/12

---

### A.39.6 Method `ranked_db/joinOriginal`

**Summary:** Joins the distance values to the original db rows with matching row indices.

**Usage:**

```
a_db = joinOriginal(a_ranked_db, rows, props)
```

**Description:** Takes the parameter columns from `orig_db` and all tests from `crit_db`. Therefore z-score values in `a_ranked_db` are replaced with original metric magnitudes. Alternatively, the scores can be preserved in the output by specifying the `keepScores` prop.

**Parameters:**

**a\_ranked\_db:** A `ranked_db` object.

**rows:** Join only the given rows.

**props:** A structure with any optional properties.

**includeIndices:** Also joins `ItemIndex` columns from the original db.

**origCols:** Also join these columns from the original DB.

**rankedCols:** Also join these columns from a\_ranked\_db.

**keepScores:** Keep tests (metrics) from a\_ranked\_db instead of original db.

**Returns:**

a\_db: A params\_tests\_db object (same type as a\_ranked\_db.orig\_db) containing the desired rows in ascending order of distance.

**See also:** [tests\\_db](#) (p. 255)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2004/12/21

---

**A.39.7 Method ranked\_db/plotCompareDistMatx**

**Summary:** Compare differences and correlations of distance matrices from two ranked DBs.

**Usage:**

```
a_plot = plotCompareDistMatx(db, rows, col_size, col_name, num_col_labels, row_name,
num_row_labels, title_str, props)
```

**Description:** Produces three plots: (1) distance difference matrix, (2) 2D cross-correlogram, and (3) repeated 1D cross-correlogram for each row.

**Parameters:**

**db, w\_db:** The ranked\_db objects to be compared.

**rows:** Indices of rows in db after joining (and sorting) for both DBs.

**col\_size:** Number of rows to take from DB to form the columns of matrix plot.

**col\_name, row\_name:** DB column to use for the figure column and row, respectively.

**num\_col\_labels, num\_row\_labels:** Number of labels to put on each axis.

**title\_str:** If non-empty, replaces generic title with db name.

**props:** A structure with any optional properties.

**sortBy:** If specified, db is sorted after being joined with original using this column.

**colorbar:** Put a colorbar on the figure.  
(also passed to plot\_abstract)

**Returns:**

a\_plot: A plot\_abstract object.

**See also:** [tests\\_db](#) (p. 255), [plot\\_abstract](#) (p. 180)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2005/12/12

---

### A.39.8 Method `ranked_db/plotDistMatrix`

**Summary:** Create a color-coded matrix plot of with total errors from the ranked DB.

**Usage:**

```
a_plot = plotDistMatrix(db, rows, col_size, col_name, num_col_labels, row_name, num_row_labels,
title_str, props)
```

**Description:** The `col_size` parameter is used to find the number of rows that make up the x-dimension of the color matrix plot.

**Parameters:**

**db:** A `ranked_db` object.

**rows:** Indices of rows in db after joining (and sorting).

**col\_size:** Number of rows to take from DB to form the columns of matrix plot.

**col\_name, row\_name:** DB column to use for the figure column and row, respectively.

**num\_col\_labels, num\_row\_labels:** Number of labels to put on each axis.

**title\_str:** If non-empty, replaces generic title with db name.

**props:** A structure with any optional properties.

**sortBy:** If specified, db is sorted after being joined with original using this column.

**colorbar:** Put a colorbar on the figure.  
(also passed to `plot_abstract`)

**Returns:**

**a\_plot:** A `plot_abstract` object.

**Example:**

```
>> plotFigure(plotDistMatrix(scored.blocked_sk_gps0503b_control_db, ':', 10, 'SK', 10,
'trial', 10, 'gps0503b (control)', preset 6 - top 50 matches', struct('sortBy', 'trial',
'colorbar', 1, 'PaperPosition', [0 0 5 3])));
```

**See also:** `ranked_db` (p. 200), `plot_abstract` (p. 180), `getDistMatrix` (p. ??),  
`plotCompareDistMatx` (p. ??)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2005/12/12

---

### A.39.9 Method `ranked_db/plotRowErrors`

**Summary:** Create plot of rankings with errors associated with each measure color-coded.

**Usage:**

```
a_plot = plotRowErrors(a_ranked_db, rows, props)
```

**Parameters:**

**a\_ranked\_db:** A `ranked_db` object.

**rows:** Indices of rows in `a_ranked_db`.

**title\_str:** (Optional) String to append to plot title.

**props:** A structure with any optional properties.

**sortMeasures:** If specified, measure order is determined with increasing overall distance.

**RowName:** Label to show on X-axis (default='Ranks')

**rowSteps:** Steps to jump in labeling rows on the x-axis.

**superposeDistances:** Superpose a white-colored distance line plot.

**colorbar:** Put a colorbar on the figure.  
(rest passed to `plot_abstract`)

**Returns:**

**a\_plot:** A `plot_abstract` object.

**See also:** `ranked_db` (p. 200), `tests_db/rankMatching` (p. 299), `plot_abstract` (p. 180), `plotImage` (p. ??)

**Author:** Cengiz Gunay `jcgunay@emory.edu`, 2005/12/12

---

### A.39.10 Method `ranked_db/renameColumns`

**Summary:** Rename an existing column or columns.

**Usage:**

```
a_db = renameColumns(a_db, test_names, new_names)
```

**Description:** This method is an overloaded method for `ranked_db` that keeps consistent the column names of the ranked, criterion and original DBs. The other DBs are not renamed for the Distance and RowIndex columns.

**Parameters:**

**a\_db:** A `ranked_db` object.

**test\_names:** A cell array of existing test names.

**new\_names:** New names to replace existing ones.

**Returns:**

**a\_db:** The ranked\_db object that includes the new columns.

**See also:** [tests\\_db/renameColumns](#) (p. 301)

**Author:** Cengiz Gunay [cgunay@emory.edu](mailto:cgunay@emory.edu), 2006/06/07

---

### A.39.11 Method ranked\_db/set

**Summary:** Generic method for setting object attributes.

**Author:** Cengiz Gunay [cgunay@emory.edu](mailto:cgunay@emory.edu), 2004/10/08

---

### A.39.12 Method ranked\_db/subsref

**Summary:** Defines generic indexing for objects.

---

## A.40 Class results\_profile

### A.40.1 Constructor results\_profile/results\_profile

**Summary:** Creates and collects result profiles for data objects.

**Usage:**

```
obj = results_profile(results, id, props)
```

**Description:** This is the base class for all profile classes.

**Parameters:**

**results:** A structure containing test results.

**id:** Identification string.

**props:** A structure with any optional properties.

**Returns a structure object with the following fields:**

results, id, props.

**See also:** [trace\\_profile](#) (p. 337), [cip\\_trace\\_profile](#) (p. 71)

**Author:** Cengiz Gunay [cgunay@emory.edu](mailto:cgunay@emory.edu), 2004/09/14

---

**A.40.2 Method** `results_profile/display`

**Author:** Cengiz Gunay `jcgunay@emory.edu`, 2004/08/04

---

**A.40.3 Method** `results_profile/get`

**Summary:** Defines generic attribute retrieval for objects.

**Author:** Cengiz Gunay `jcgunay@emory.edu`, 2004/09/14

---

**A.40.4 Method** `results_profile/getResults`

**Summary:** Return the results profile structure.

**Usage:**

```
results = getResults(p)
```

**Parameters:**

`p`: A `result_profile` object.

**Returns:**

`results`: A structure associating test names to values.

**See also:** [results\\_profile](#) (p. 206)

**Author:** Cengiz Gunay `jcgunay@emory.edu`, 2004/09/14

---

**A.40.5 Method** `results_profile/plot`

**Summary:** Generic method to plot a `tests_db` or a subclass. Requires a `plot_abstract` method to be defined for this object.

**Usage:**

```
h = plot(a_tests_db, title_str, props)
```

**Parameters:**

`a_tests_db`: A `histogram_db` object.

`title_str`: (Optional) String to append to plot title.

`props`: Optional properties passed to `plot_abstract`.

**Returns:**

`h`: The figure handle created.

**See also:** [plot\\_abstract](#) (p. 180), [plotFigure](#) (p. ??)

**Author:** Cengiz Gunay `jcgunay@emory.edu`, 2004/10/06

---

### A.40.6 Method `results_profile/subsref`

**Summary:** Defines generic indexing for objects.

---

## A.41 Class `script_array`

### A.41.1 Constructor `script_array/script_array`

**Summary:** Generic class that provides the scripts for a repetitive array job.

**Usage:**

```
obj = script_array(num_runs, id, props)
```

**Description:** This is the base class for all `script_array` classes. Runs the `runJob` method as `num_runs` many times. Run initiated by calling `runFirst`, but the final result will be returned by `runLast`.

**Parameters:**

**num\_runs:** The number of times the `runJob` script should be evoked.

**id:** Identification string.

**props:** A structure with any optional properties.

**runJobFunc:** A function name or handle to be used instead of default `runJob`.

**parallel:** If 1, run jobs in parallel using `parfor`.

**Returns a structure object with the following fields:**

`num_runs`, `id`, `props`.

**Example:**

```
>> func1 = inline('x^2')
>> runFirst(script_array(10, 'squares numbers up to 10'), struct('runJobFunc', func1))
ans = [ 1] [ 4] [ 9] [ 16] [ 25] [ 36] [ 49] [ 64] [ 81] [100]
```

**See also:** `runFirst` (p. ??), `runLast` (p. ??), `runJob` (p. ??), `parfor` (p. ??)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2006/02/01

---

### A.41.2 Method `script_array/get`

**Summary:** Defines generic attribute retrieval for objects.

**Author:** Cengiz Gunay jcgunay@emory.edu, 2004/09/14

---

### A.41.3 Method `script_array/runFirst`

**Summary:** Method to be called at beginning of `script_array` jobs.

**Usage:**

```
job_results = runFirst(a_script_array)
```

**Description:** This method initiates the `script_array` jobs. It loops and calls `runJob` and finally calls `runLast`.

**Parameters:**

`a_script_array`: A `script_array` object.

**Returns:**

`job_results`: A cell array of results collected from each item of the vector jobs.

**Example:**

```
>> results = runFirst(script_array(10, 'this one does nothing for 10 times'));
```

**See also:** `runLast` (p. ??), `runJob` (p. ??)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2006/02/01

---

### A.41.4 Method `script_array/runJob`

**Summary:** Method to be called for each of the `script_array` jobs.

**Usage:**

```
job_result = runJob(a_script_array, vector_index)
```

**Description:** This method is provided as a placeholder and does nothing. If the `run_job_func` property is defined, it will call that function.

**Parameters:**

`a_script_array`: A `script_array` object.

`vector_index`: The index within the vector job.

**Returns:**

`job_result`: Any output produced by the job.

**Example:**

See real example in `script_array`. Call the 5th job:

```
>> runJob(script_array(10, 'this one does nothing for 10 times'), 5);
```

**See also:** `runLast` (p. ??), `runFirst` (p. ??)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2006/02/01

---

#### A.41.5 Method `script_array/runLast`

**Summary:** Method to be called last after the `script_array` jobs.

**Usage:**

```
job_results = runLast(a_script_array, job_results)
```

**Description:** This method is provided as a placeholder and does nothing. It can filter-out the results returned from the jobs run. Normally it is invoked internally by the `runFirst` method, after running and collecting results from the vector jobs with the `runJob` method.

**Parameters:**

`a_script_array`: A `script_array` object.  
`job_results`: The index within the vector job.

**Returns:**

`job_results`: Any output produced by the job.

**Example:**

Call it directly:

```
>> runLast(script_array(10, 'this one does nothing for 10 times'), );
```

**See also:** `runJob` (p. ??), `runFirst` (p. ??)

**Author:** Cengiz Gunay `jcgunay@emory.edu`, 2006/02/01

---

#### A.41.6 Method `script_array/set`

**Summary:** Generic method for setting object attributes.

**Author:** Cengiz Gunay `jcgunay@emory.edu`, 2006/02/06

---

#### A.41.7 Method `script_array/subsasgn`

**Summary:** Defines generic index-based assignment for objects.

**Author:** Cengiz Gunay `jcgunay@emory.edu`, 2006/02/06

---

#### A.41.8 Method `script_array/subsref`

**Summary:** Defines generic indexing for objects.

**Author:** Cengiz Gunay `jcgunay@emory.edu`, 2004/08/04

---

## A.42 Class `script_array_for_cluster`

### A.42.1 Constructor `script_array_for_cluster/script_array_for_cluster`

**Summary:** Generic class defining a repetitive vector job to be run on a Sun Grid Engine (SGE) computing cluster.

**Usage:**

```
a_script_cluster = script_array_for_cluster(num_runs, sge_wrapper_script, id, props)
```

**Description:** This is a subclass of the `script_array` class. The `runFirst` method spawns `num_runs` copies of the `runJob` method in parallel on the cluster, followed by the invocation of the `runLast` method.

**Parameters:**

**num\_runs:** The number of times the `runJob` script should be evoked.

**sge\_wrapper\_script:** A script that can be submitted with `qsub` and can execute arbitrary

Matlab commands on the cluster nodes. It can have `qsub` options prepended to it such as `'-p -100 -q all.q ;abs_path_to/sge_matlab.sh'`.

**id:** Identification string.

**props:** A structure with any optional properties.

**notifyByMail:** An SGE notification email is sent to this address after `lastJob`.  
(others passed to `script_array`)

**Returns a structure object with the following fields:**

`num_runs`, `id`, `props`.

**See also:** [runFirst](#) (p. ??), [runLast](#) (p. ??), [runJob](#) (p. ??), [script\\_array](#) (p. 208)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2006/02/02

---

### A.42.2 Method `script_array_for_cluster/get`

**Summary:** Defines generic attribute retrieval for objects.

**Author:** Cengiz Gunay jcgunay@emory.edu, 2004/09/14

---

### A.42.3 Method `script_array_for_cluster/runFirst`

**Summary:** Method to be called at beginning of `script_array_for_cluster` jobs.

**Usage:**

```
job_results = runFirst(a_script_cluster)
```

**Description:** This method initiates the `script_array_for_cluster` jobs. It submits an SGE vector job for running each `runJob` and finally `runLast`. There is no way of collecting outputs from individual `runJob` calls.

**Parameters:**

`a_script_cluster`: A `script_array_for_cluster` object.

**Returns:**

`job_results`: A cell array of results collected from each item of the vector jobs.

**Example:**

```
>> runFirst(script_array_for_cluster(10, 'this one does nothing for 10 times'));
```

**See also:** [script\\_array\\_for\\_cluster](#) (p. 211)

**Author:** Cengiz Gunay <cgunay@emory.edu>, 2006/02/01

---

### A.42.4 Method `script_array_for_cluster/set`

**Summary:** Generic method for setting object attributes.

**Author:** Cengiz Gunay <cgunay@emory.edu>, 2006/02/06

---

## A.43 Class `script_array_loaddb`

### A.43.1 Constructor `script_array_loaddb/script_array_loaddb`

**Summary:** Loads dataset items into a database by partitioning into parallel tasks.

**Usage:**

```
a_s = script_array_loaddb(num_runs, a_dataset, id, props)
```

**Description:** This is a subclass of the `script_array` class. It will analyze and load items in a `params_tests.dataset` (and subclass) objects by partitioning it into `num_runs` pieces, to be loaded in parallel on multicore machines. Partitioned loading of databases can also be beneficial in serial (by setting prop `'parallel'` to 0) for large datasets, such that problematic items (that crash) do not hinder the loading of the rest of the dataset.

### Parameters:

**num\_runs:** The number of times the runJob script should be evoked.

**sge\_wrapper\_script:** A script that can be submitted with qsub and can execute arbitrary Matlab commands on the cluster nodes. It can have qsub options prepended to it such as '-p -100 -q all.q ;abs\_path\_to/sge\_matlab.sh'.

**id:** Identification string.

**props:** A structure with any optional properties.

**items:** If specified, only load items in this horizontal vector.  
(others passed to script\_array)

### Returns a structure object with the following fields:

dataset, script\_array.

**See also:** [runFirst](#) (p. ??), [runLast](#) (p. ??), [runJob](#) (p. ??), [script\\_array](#) (p. 208)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2014/04/02

---

### A.43.2 Method script\_array\_loaddb/runJob

**Summary:** Loads one piece of the database.

### Usage:

```
a_db_piece = runJob(a_s, vector_index)
```

**Description:** Load the part of the database calculated by the index. Uses the params\_tests\_dataset/params\_tests\_db method to load the database.

### Parameters:

**a\_s:** A script\_array\_loaddb object.

**vector\_index:** The index within the vector job.

### Returns:

a\_db\_piece: Piece of loaded database.

**See also:** [script\\_array\\_loaddb](#) (p. 212), [runLast](#) (p. ??), [runFirst](#) (p. ??)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2014/04/02

---

### A.43.3 Method `script_array_loaddb/runLast`

**Summary:** Method to be called last after the `script_array` jobs.

**Usage:**

```
a_db = runLast(a_script_array, job_results)
```

**Description:** Combines the separately loaded databases found in `job_results` into a final one and returns it.

**Parameters:**

`a_script_array`: A `script_array` object.  
`job_results`: The index within the vector `job`.

**Returns:**

`a_db`: Concatenated database.

**See also:** [script\\_array\\_loaddb](#) (p. 212), [runJob](#) (p. ??), [runFirst](#) (p. ??)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2014/04/02

---

## A.44 Class `script_factory`

### A.44.1 Constructor `script_factory/script_factory`

**Summary:** Generic class to automatically create a set of scripts.

**Usage:**

```
obj = script_factory(num_scripts, out_name, id, props)
```

**Description:** This is the base class for all `script_factory` classes.

**Parameters:**

`num_scripts`: Number of scripts to create.  
`out_name`: The file name for the output scripts. A ' ' filename corresponds to the script number.  
`id`: Identification string.  
`props`: A structure with any optional properties.

**Returns a structure object with the following fields:**

`num_scripts`, `out_name`, `id`, `props`.

**See also:** [script\\_factory/writeScripts](#) (p. ??)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2005/11/28

---

#### A.44.2 Method `script_factory/get`

**Summary:** Defines generic attribute retrieval for objects.

**Author:** Cengiz Gunay `jcgunay@emory.edu`, 2004/09/14

---

### A.45 Class `spike_shape`

#### A.45.1 Constructor `spike_shape/spike_shape`

**Summary:** An action potential shape trace.

**Usage:**

```
obj = spike_shape(data, dt, dy, id)
```

**Parameters:**

**data:** A vector of data points containing the spike shape.

**dt:** Time resolution [s].

**dy:** y-axis resolution [ISI (V, A, etc.)]

**id:** Identification string.

**props:** A structure with any optional properties.

**baseline:** Resting potential.

**threshold:** Spike threshold.

**initVm\_method:** Method to obtain spike initiation voltage.

1- maximum acceleration point 2- threshold crossing of acceleration (needs threshold) 3- threshold crossing of slope (needs threshold) 4- maximum acceleration in phase space (optionally specify maximal threshold as `init_threshold`) 5- point of maximum curvature, when slope is between `init_lo_thr` and `init_hi_thr` 6- local maximum of second derivative in the phase space nearest slope crossing `init_threshold` 7- threshold crossing of interpolated slope (needs threshold) 8- maximum curvature in phase-plane 9- Combined curvature and inflection method in time-domain.

**init\_threshold:** Spike initiation threshold (deriv or accel).

(see above methods and implementation in `calcInitVm`)

**init\_lo\_thr, init\_hi\_thr:** Low and high thresholds for slope.

**Returns a structure object with the following fields:**

`trace`, `props`.

**See also:** [trace/spike\\_shape](#) (p. 332), [trace/analyzeSpikesInPeriod](#) (p. 318), [trace](#) (p. 316), [spikes](#) (p. 227), [period](#) (p. 162)

**Author:** Cengiz Gunay `jcgunay@emory.edu`, 2004/07/30

---

#### A.45.2 Method `spike_shape/calcInitVm`

**Summary:** Calculates spike threshold related measures of the `spike_shape`, `s`.

**Usage:**

```
[init_val, init_idx, rise_time, amplitude, peak_mag, peak_idx, max_d1o, a_plot] = calcInitVm(s, max_idx, min_idx)
```

**Parameters:**

`s`: A `spike_shape` object.  
`max_idx`: The index of the maximal point of the `spike_shape` [dt].  
`min_idx`: The index of the minimal point of the `spike_shape` [dt].  
`plotit`: If non-zero, plot a graph annotating the test results (optional).

**Returns:**

`init_val`: The potential value [dy]. `init_idx`: Its index in the `spike_shape` [dt].  
`rise_time`: Time from initiation to maximum [dt]. `amplitude`: Magnitude from initiation to max [dy]. `peak_mag`: Peak value [dy]. `peak_idx`: Extrapolated spike peak index [dt]. `max_d1o`: Maximal value of first voltage derivative [dy]. `a_plot`: `plot_abstract`, if requested.

**See also:** [spike\\_shape](#) (p. 215)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/08/02

---

#### A.45.3 Method `spike_shape/calcInitVmLtdMaxCurv`

**Summary:** Calculates the action potential threshold using the maximum of the curvature equation only in the limited range given with two voltage slope thresholds.

**Usage:**

```
[init_idx, a_plot] = calcInitVmLtdMaxCurv(s, max_idx, min_idx, lo_thr, hi_thr, plotit)
```

**Description:** Point of maximum curvature:  $K_p = V''[1 + (V')^2]^{-3/2}$  Taken from Sekerli, Del Negro, Lee and Butera. IEEE Trans. Biomed. Eng., 51(9): 1665-71, 2004.

**Parameters:**

`s`: A `spike_shape` object.  
`max_idx`: The index of the maximal point of the `spike_shape` [dt].  
`min_idx`: The index of the minimal point of the `spike_shape` [dt].  
`lo_thr`, `hi_thr`: Lower and higher thresholds for time derivative of voltage.

**plotit:** If non-zero, plot a graph annotating the test results (optional).

**Returns:**

**init\_idx:** AP threshold index in the `spike_shape` [dt]. **a\_plot:** `plot_abstract`, if requested.

**See also:** `calcInitVm` (p. ??)

**Author:** Cengiz Gunay `jcgunay@emory.edu`, 2004/11/19

---

**A.45.4 Method `spike_shape/calcInitVmMaxCurvature`**

**Summary:** Calculates the action potential threshold using the maximum of the curvature equation.

**Usage:**

```
[init_idx, a_plot] = calcInitVmMaxCurvature(s, max_idx, min_idx, plotit)
```

**Description:** Point of maximum curvature:  $K_p = V''[1 + (V')^2]^{-3/2}$  Taken from Sekerli, Del Negro, Lee and Butera. IEEE Trans. Biomed. Eng., 51(9): 1665-71, 2004.

**Parameters:**

**s:** A `spike_shape` object.

**max\_idx:** The index of the maximal point of the `spike_shape` [dt].

**min\_idx:** The index of the minimal point of the `spike_shape` [dt].

**plotit:** If non-zero, plot a graph annotating the test results (optional).

**Returns:**

**init\_idx:** AP threshold index in the `spike_shape` [dt]. **a\_plot:** `plot_abstract`, if requested.

**See also:** `calcInitVm` (p. ??)

**Author:** Cengiz Gunay `jcgunay@emory.edu`, 2004/11/19

---

### A.45.5 Method `spike_shape/calcInitVmMaxCurvPhasePlane`

**Summary:** Calculates the voltage at the maximum curvature in the phase plane as action potential threshold.

**Usage:**

```
[init_idx, max_dlo, a_plot, fail_cond] = calcInitVmMaxCurvPhasePlane(s, max_idx, min_idx, plotit)
```

**Description:** First take the phase-plane  $v'-v$  from the beginning to  $\max(v')$ . Then regulate intervals by interpolation. Point of maximum curvature:  $K_p = V''[1 + (V')^2]^{(-3/2)}$  Taken from Sekerli, Del Negro, Lee and Butera. IEEE Trans. Biomed. Eng., 51(9): 1665-71, 2004.

**Parameters:**

**s:** A `spike_shape` object.  
**max\_idx:** The index of the maximal point of the `spike_shape` [dt].  
**min\_idx:** The index of the minimal point of the `spike_shape` [dt].  
**plotit:** If non-zero, plot a graph annotating the test results (optional).

**Returns:**

**init\_idx:** AP threshold index in the `spike_shape` [dt]. **max\_dlo:** Maximal value of first voltage derivative [dy]. **a\_plot:** `plot_abstract`, if requested. **fail\_cond:** True if this algorithm fails to be trustable.

**See also:** `calcInitVm` (p. ??)

**Author:** Cengiz Gunay ;cgunay@emory.edu, 2005/04/12

---

### A.45.6 Method `spike_shape/calcInitVmSekerliV2`

**Summary:** Calculates the action potential threshold using the maximum second derivative of the phase space of voltage-time slope versus voltage.

**Usage:**

```
[init_idx, a_plot] = calcInitVmSekerliV2(s, max_idx, min_idx, plotit)
```

**Parameters:**

**s:** A `spike_shape` object.  
**max\_idx:** The index of the maximal point of the `spike_shape` [dt].  
**min\_idx:** The index of the minimal point of the `spike_shape` [dt].  
**plotit:** If non-zero, plot a graph annotating the test results (optional).

**Returns:**

init\_idx: Its index in the spike\_shape [dt]. a\_plot: plot\_abstract, if requested.

**See also:** `calcInitVm` (p. ??)

**Author:** Cengiz Gunay <cgunay@emory.edu>, 2004/11/18

---

**A.45.7 Method spike\_shape/calcInitVmSlopeThreshold**

**Summary:** Calculates the AP threshold using the slope threshold crossing.

**Usage:**

```
[init_idx, a_plot] = calcInitVmSlopeThreshold(s, max_idx, min_idx, thr, plotit)
```

**Parameters:**

s: A spike\_shape object.  
max\_idx: The index of the maximal point of the spike\_shape [dt].  
min\_idx: The index of the minimal point of the spike\_shape [dt].  
thr: Threshold for time derivative of voltage.  
plotit: If non-zero, plot a graph annotating the test results (optional).

**Returns:**

init\_idx: AP threshold index in the spike\_shape [dt]. a\_plot: plot\_abstract, if requested.

**See also:** `calcInitVm` (p. ??)

**Author:** Cengiz Gunay <cgunay@emory.edu>, 2004/11/24

---

**A.45.8 Method spike\_shape/calcInitVmSlopeThresholdSupsample**

**Summary:** Estimates the AP threshold as the first slope threshold crossing by first supersampling the data using cubic spline interpolation.

**Usage:**

```
[init_idx, a_plot] = calcInitVmSlopeThresholdSupsample(s, max_idx, min_idx, thr, plotit)
```

**Parameters:**

s: A spike\_shape object.  
max\_idx: The index of the maximal point of the spike\_shape [dt].  
min\_idx: The index of the minimal point of the spike\_shape [dt].

**thr:** Threshold for time derivative of voltage.

**plotit:** If non-zero, plot a graph annotating the test results (optional).

**Returns:**

**init\_idx:** AP threshold index in the `spike_shape` [dt]. **a\_plot:** `plot_abstract`, if requested.

**See also:** `calcInitVm` (p. ??)

**Author:** Cengiz Gunay `jcgunay@emory.edu`, 2005/03/23

---

**A.45.9 Method `spike_shape/calcInitVmV2PPLocal`**

**Summary:** Calculates the action potential threshold by finding the local second derivative maximum in voltage-time slope versus voltage phase plane, nearest a slope threshold crossing.

**Usage:**

```
[init_idx, a_plot] = calcInitVmV2PPLocal(s, max_idx, min_idx, lo_thr, plotit)
```

**Parameters:**

**s:** A `spike_shape` object.

**max\_idx:** The index of the maximal point of the `spike_shape` [dt].

**min\_idx:** The index of the minimal point of the `spike_shape` [dt].

**lo\_thr:** Lower threshold for time voltage slope.

**plotit:** If non-zero, plot a graph annotating the test results (optional).

**Returns:**

**init\_idx:** Its index in the `spike_shape` [dt]. **a\_plot:** `plot_abstract`, if requested.

**See also:** `calcInitVm` (p. ??)

**Author:** Cengiz Gunay `jcgunay@emory.edu`, 2004/11/18

---

#### A.45.10 Method `spike_shape/calcInitVmV3hKpTinterp`

**Summary:** Calculates candidates for action potential threshold using the first three time-domain derivatives.

**Usage:**

```
[init_idx, a_plot] = calcInitVmV3hKpTinterp(s, max_idx, min_idx, lo_thr, hi_thr, plotit)
```

**Description:** First uses interpolation to increase time points. Calculates  $h$ , the second derivative of phase-plane ( $d^2 v'/dv^2$ ), in terms of time-domain derivatives. Also calculates  $K_p = V''[1 + (V')^2]^{-3/2}$ , the curvature. The maxima of these functions are used as candidates for AP thresholds.

**Parameters:**

`s`: A `spike_shape` object.  
`max_idx`: The index of the maximal point of the `spike_shape` [dt].  
`min_idx`: The index of the minimal point of the `spike_shape` [dt].  
`lo_thr`, `hi_thr`: Lower and higher thresholds for time derivative of voltage.  
`plotit`: If non-zero, plot a graph annotating the test results (optional).

**Returns:**

`init_idx`: Indices of threshold candidates in the `spike_shape` [dt]. `a_plot`: `plot_abstract`, if requested.

**See also:** `calcInitVm` (p. ??)

**Author:** Cengiz Gunay <cgunay@emory.edu>, 2004/11/18

---

#### A.45.11 Method `spike_shape/calcMaxVm`

**Summary:** Calculates the maximal value of the `spike_shape`, `s`.

**Usage:**

```
[max_val, max_idx] = calcMaxVm(s)
```

**Parameters:**

`s`: A `spike_shape` object.

**Returns:**

`max_val`: The max value. `max_idx`: Its index in the `spike_shape` [dt].

**See also:** `period` (p. 162), `spike_shape` (p. 215), `trace/calcMax` (p. 320)

**Author:** Cengiz Gunay <cgunay@emory.edu>, 2004/08/02

---

#### A.45.12 Method `spike_shape/calcMinVm`

**Summary:** Calculates the minimal value of the `spike_shape`, `s`.

**Usage:**

```
[min_val, min_idx, max_min_time] = calcMinVm(s, max_idx)
```

**Parameters:**

`s`: A `spike_shape` object.

`max_idx`: The index of the maximal point of the `spike_shape` [dt].

**Returns:**

`min_val`: The min value [dy]. `min_idx`: Its index in the `spike_shape` [dt]. `max_min_time`: Time from max to min [dt].

**See also:** [period](#) (p. 162), [spike\\_shape](#) (p. 215), [trace/calcMin](#) (p. 321)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/08/02

---

#### A.45.13 Method `spike_shape/calcWidthFall`

**Summary:** Calculates the spike width and fall information of the `spike_shape`, `s`.

**Usage:**

```
[base_width, half_width, half_Vm, fall_time, min_idx, min_val, max_ahp, ahp_decay_constant,
dahp_mag, dahp_idx] = ... calcWidthFall(s, max_idx, max_val, init_idx, init_val)
```

**Description:** `max_*` can be the `peak_*` from `calcInitVm`.

**Parameters:**

`s`: A `spike_shape` object.

`max_idx`: The index of the maximal point [dt].

`max_val`: The value of the maximal point [dy].

`init_idx`: The index of spike initiation point [dt].

`init_val`: The value of spike initiation point [dy].

`fixed_Vm`: The desired height for width calculation [V].

**Returns:**

`base_width`: Width of spike at base [dt] `half_width`: Width of spike at `half_Vm` [dt] `half_Vm`: Half height of spike [dy] `fall_time`: Time from peak to initialization level [dt]. `min_idx`: The index of the minimal point of the `spike_shape` [dt]. `max_ahp`: Magnitude from initiation to minimum [dy]. `ahp_decay_constant`: Approximation to refractory decay after maxAHP [dt]. `dahp_mag`: Magnitude of the double AHP peak `dahp_idx`: Index of the double AHP peak

**See also:** [spike\\_shape](#) (p. 215)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/08/02

---

**A.45.14 Method** `spike_shape/display`

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/08/04

---

**A.45.15 Method** `spike_shape/get`

**Summary:** Defines generic attribute retrieval for objects.

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/09/14

---

**A.45.16 Method** `spike_shape/getResults`

**Summary:** Runs all tests defined by this class and return them in a structure.

**Usage:**

```
[results, a_plot] = getResults(s, plotit)
```

**Parameters:**

`s`: A `spike_shape` object.

`plotit`: If non-zero, plot a graph annotating the test results (optional).

**Returns:**

`results`: A structure associating test names to values in ms and mV. `a_plot`: `plot_abstract`, if requested.

**See also:** [spike\\_shape](#) (p. 215)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/08/02

---

**A.45.17 Method** `spike_shape/plotCompareMethods`

**Summary:** Creates a multi-plot comparing different action potential threshold finding methods.

**Usage:**

```
a_plot = plotCompareMethods(s, title_str)
```

**Parameters:**

`s`: A `spike_shape` object.  
`title_str`: Title suffix (optional).

**Returns:**

`a_plot`: A `plot_abstract` object that can be visualized.

**See also:** [spike\\_shape](#) (p. 215), [plot\\_abstract](#) (p. 180)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/11/19

---

**A.45.18 Method** `spike_shape/plotCompareMethodsSimple`

**Summary:** Creates a multi-plot comparing different action potential threshold finding methods.

**Usage:**

```
a_plot = plotCompareMethodsSimple(s, title_str)
```

**Parameters:**

`s`: A `spike_shape` object.  
`title_str`: Title suffix (optional).

**Returns:**

`a_plot`: A `plot_abstract` object that can be visualized.

**See also:** [spike\\_shape](#) (p. 215), [plot\\_abstract](#) (p. 180)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/11/19

---

**A.45.19 Method** `spike_shape/plotPP`

**Summary:** Plots the  $dV/dt$  vs.  $V$  phase-plane representation of the spike shape.

**Usage:**

```
a_plot = plotPP(s)
```

**Parameters:**

`s`: A `spike_shape` object.

**Returns:**

`a_plot`: A `plot_abstract` object that can be visualized.

**See also:** [spike\\_shape](#) (p. 215), [plot\\_abstract](#) (p. 180)

**Author:** Cengiz Gunay `jcgunay@emory.edu`, 2004/11/16

---

**A.45.20 Method** `spike_shape/plotResults`

**Summary:** Plots the spike shape annotated with result characteristics.

**Usage:**

```
a_plot = plotResults(s, title_str, props)
```

**Parameters:**

`s`: A `spike_shape` object.

**Returns:**

`a_plot`: A `plot_abstract` object that can be visualized. `title_str`: (Optional) String to append to plot title. `props`: A structure with any optional properties, passed to `trace/plotData`.

**See also:** [spike\\_shape](#) (p. 215), [plot\\_abstract](#) (p. 180)

**Author:** Cengiz Gunay `jcgunay@emory.edu`, 2004/11/17

---

**A.45.21 Method** `spike_shape/plotTPP`

**Summary:** Plots the  $dV/dt$  vs.  $V$  phase-plane representation of the spike shape.

**Usage:**

```
a_plot = plotTPP(s)
```

**Description:** Uses the Taylor series estimation for finding the derivative  $dV/dt$ .

**Parameters:**

s: A spike\_shape object.

**Returns:**

a\_plot: A plot\_abstract object that can be visualized.

**See also:** [spike\\_shape](#) (p. 215), [plot\\_abstract](#) (p. 180), [diffT](#) (p. ??)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/11/16

---

**A.45.22 Method spike\_shape/set**

**Summary:** Generic method for setting object attributes.

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/10/08

---

**A.46 Class spike\_shape\_profile**

**A.46.1 Constructor spike\_shape\_profile/spike\_shape\_profile**

**Summary:** Holds the results profile from a spike\_shape object.

**Usage:**

```
a_ss_profile = spike_shape_profile(results, a_spike_shape, props)
```

**Parameters:**

results: A structure containing test results.

a\_spike\_shape: A spike\_shape object.

props: A structure with any optional properties.

**Returns a structure object with the following fields:**

results\_profile: Contains results of tests. spike\_shape: The spike\_shape object from which results were obtained. props.

**See also:** [results\\_profile](#) (p. 206)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2005/08/17

---

**A.46.2 Method spike\_shape\_profile/get**

**Summary:** Defines generic attribute retrieval for objects.

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/09/14

---

### A.46.3 Method `spike_shape_profile/plot_abstract`

**Summary:** Plots the spike shape with measurements marked in red.

**Usage:**

```
a_plot = plot_abstract(s, props)
```

**Parameters:**

**s:** A `spike_shape` object.

**props:** A structure with any optional properties.

**absolute\_peak\_time:** Shift the peak to this point on the plot.

**no\_plot\_spike:** Do not plot the spike shape first.

**Returns:**

**a\_plot:** A `plot_abstract` object that can be visualized.

**See also:** [spike\\_shape](#) (p. 215), [plot\\_abstract](#) (p. 180)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2005/08/17

---

## A.47 Class `spikes`

### A.47.1 Constructor `spikes/spikes`

**Summary:** Spike times from a trace.

**Usage:**

```
obj = spikes(times, num_samples, dt, id)
```

**Parameters:**

**times:** The spike times [dt].

**num\_samples:** Number of samples in the original trace.

**dt:** Time resolution [s].

**id:** Identification string.

**Returns a structure object with the following fields:**

**times, num\_samples, dt, id.**

**See also:** [trace/spikes](#) (p. 332), [trace](#) (p. 316), [spike\\_shape](#) (p. 215), [period](#) (p. 162)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/07/30

---

#### A.47.2 Method spikes/addSpikes

**Usage:**

```
s = addSpike(s, times)
```

**Parameters:**

s: A spikes object.  
times: Times of spikes to add

**Returns:**

s: The updated object.

**See also:** [spikes](#) (p. 227)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2005/08/16

---

#### A.47.3 Method spikes/display

**Author:** Cengiz Gunay jcgunay@emory.edu, 2004/08/04

---

#### A.47.4 Method spikes/get

**Summary:** Defines generic attribute retrieval for objects.

**Author:** Cengiz Gunay jcgunay@emory.edu, 2004/09/14

---

#### A.47.5 Method spikes/getISIs

**Summary:** Calculates the firing rate of the spikes found in the given period with an averaged inter-spike-interval approach.

**Usage:**

```
isi = getISIs(s, period)
```

**Parameters:**

s: A spikes object.  
period: The period where spikes were found (optional)

**Returns:**

isi: Inter-spike-interval vector [dt]

**See also:** [trace](#) (p. 316), [spikes](#) (p. 227), [period](#) (p. 162)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2004/03/09

---

#### A.47.6 Method `spikes/getResults`

**Summary:** Runs all tests defined by this class and return them in a structure.

**Usage:**

```
results = getResults(s)
```

**Parameters:**

`s`: A spikes object.

**Returns:**

`results`: A structure associating test names to values in ms and mV (or mA).

**See also:** [spikes](#) (p. 227)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/09/13

---

#### A.47.7 Method `spikes/intoPeriod`

**Summary:** Shifts the spikes times to be within the given period.

**Usage:**

```
obj = intoPeriod(s, a_period)
```

**Description:** Assuming this spikes object's length fits into the given period, it shifts all times to start from the beginning of the given period. This may be used to reconstruct the original spikes object from subperiods that were cut out previously, using the `withinPeriod` method.

**Parameters:**

`s`: A spikes object.

`a_period`: The desired period

**Returns:**

`obj`: A spikes object

**See also:** [spikes](#) (p. 227), [period](#) (p. 162)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/07/31

---

#### A.47.8 Method `spikes/ISICV`

**Summary:** Calculates the coefficient of variation (CV) of the inter-spike-intervals (ISI).

**Usage:**

```
cv = ISICV(s, a_period)
```

**Parameters:**

`s`: A spikes object.

`a_period`: The period where spikes were found (optional)

**Returns:**

`cv`: Coefficient of variation.

**See also:** [spikes](#) (p. 227), [period](#) (p. 162)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/09/13

---

#### A.47.9 Method `spikes/periodWhole`

**Summary:** Returns the boundaries of the whole period of spikes, `s`.

**Usage:**

```
whole_period = periodWhole(s)
```

**Parameters:**

`s`: A spikes object.

**See also:** [period](#) (p. 162), [spikes](#) (p. 227)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/07/30

---

#### A.47.10 Method `spikes/plot`

**Summary:** Plots spikes.

**Usage:**

```
h = plot(t)
```

**Parameters:**

`t`: A spikes object.

`title_str`: (Optional) String to append to plot title.

**Returns:**

h: Handle to figure object.

**See also:** [spikes](#) (p. 227), [plot\\_abstract](#) (p. 180)

**Author:** Cengiz Gunay <cgunay@emory.edu>, 2004/08/04

---

**A.47.11 Method spikes/plotData**

**Summary:** Plots a spikes object.

**Usage:**

```
a_plot = plotData(s, title_str)
```

**Description:** If s is a vector of spikes objects, returns a vector of plot objects.

**Parameters:**

s: A spikes object.

**Returns:**

a\_plot: A plot\_abstract object that can be visualized. title\_str: (Optional) String to append to plot title.

**See also:** [trace](#) (p. 316), [plot\\_abstract](#) (p. 180)

**Author:** Cengiz Gunay <cgunay@emory.edu>, 2005/10/21

---

**A.47.12 Method spikes/plotFreqVsTime**

**Summary:** Plots a frequency-time graph from the spikes object.

**Usage:**

```
a_plot = plotFreqVsTime(s, title_str, props)
```

**Description:** If s is a vector of spikes objects, returns a vector of plot objects.

**Parameters:**

s: A spikes object.

title\_str: (Optional) String to append to plot title.

props: A structure with any optional properties.

timeScale: 's' for seconds, or 'ms' for milliseconds.

type: If 'simple' plots 1/is for each spike time, 'manhattan' uses flat lines of 1/isi height between spike times (default). (others passed to plot\_abstract)

**Returns:**

a\_plot: A plot\_abstract object that can be visualized. title\_str: (Optional) String to append to plot title.

**See also:** [trace](#) (p. 316), [plot\\_abstract](#) (p. 180)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2006/05/05

---

**A.47.13 Method spikes/plotISIs**

**Summary:** Plots a spikes object.

**Usage:**

```
a_plot = plotISIs(s, title_str)
```

**Description:** If s is a vector of spikes objects, returns a vector of plot objects.

**Parameters:**

s: A spikes object.

**Returns:**

a\_plot: A plot\_abstract object that can be visualized. title\_str: (Optional) String to append to plot title.

**See also:** [trace](#) (p. 316), [plot\\_abstract](#) (p. 180)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2005/10/21

---

**A.47.14 Method spikes/set**

**Summary:** Generic method for setting object attributes.

**Author:** Cengiz Gunay jcgunay@emory.edu, 2004/10/08

---

**A.47.15 Method spikes/SFA**

**Summary:** Calculates the spike frequency accommodation (SFA) of the inter-spike-intervals (ISI).

**Usage:**

```
sfa = SFA(s, a_period)
```

**Description:** SFA is the ration of the last ISI to the first ISI in the period.

**Parameters:**

**s:** A spikes object.  
**a\_period:** The period where spikes were found (optional)

**Returns:**

**sfa:** Spike frequency accommodation.

**See also:** [spikes](#) (p. 227), [period](#) (p. 162)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/09/13

---

**A.47.16 Method spikes/spikeAmpSlope**

**Summary:** Calculates the time constant and steady-state value of the spike amplitude for slow inactivating decays.

**Usage:**

```
[a_tau, da_inf] = spikeAmpSlope(a_spikes, a_trace, a_period)
```

**Parameters:**

**a\_spikes:** A spikes object.  
**a\_trace:** A trace object.  
**a\_period:** The desired period (optional)

**Returns:**

**a\_tau:** Approximate amplitude decay constant. **da\_inf:** Delta change in final spike peak value from initial.

**See also:** [period](#) (p. 162), [spikes](#) (p. 227), [trace](#) (p. 316)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/09/15

---

**A.47.17 Method spikes/spikeRate**

**Summary:** Calculates the average firing rate [Hz] of the given spike train.

**Usage:**

```
freq = spikeRate(s, a_period)
```

**Parameters:**

**s:** A spikes object.  
**a\_period:** The period where spikes were found (optional)

**Returns:**

freq: Firing rate [Hz]

**See also:** [spikes](#) (p. 227), [period](#) (p. 162)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/03/09

---

**A.47.18 Method** `spikes/spikeRateISI`

**Summary:** Calculates the firing rate of the spikes found in the given period with an averaged inter-spike-interval approach.

**Usage:**

```
freq = spikeRateISI(s, trace_index, times, period)
```

**Parameters:**

s: A spikes object.

period: The period where spikes were found (optional)

**Returns:**

freq: Firing rate [Hz]

**See also:** [trace](#) (p. 316), [spikes](#) (p. 227), [period](#) (p. 162)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/03/09

---

**A.47.19 Method** `spikes/subsref`

**Summary:** Defines generic indexing for objects.

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/08/04

---

**A.47.20 Method** `spikes/vertcat`

**Summary:** Vertical concatenation `[a_spikes;with_spikes;...]` operator.

**Usage:**

```
a_spikes = vertcat(a_spikes, with_spikes, ...)
```

**Description:** Concatenates spike times of `with_spikes` with that of `a_spikes`. Overrides the built-in `vertcat` function that is called when `[a_spikes;with_spikes]` is executed.

**Parameters:**

a\_spikes, with\_spikes, ...: Spikes objects.

**Returns:**

a\_spikes: A tests\_spikes that contains times of all given spikes objects.

**See also:** [vertcat](#) (p. ??), [spikes](#) (p. 227)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2005/08/16

---

**A.47.21 Method spikes/withinPeriod**

**Summary:** Returns a spikes object valid only within the given period, subtracts the offset.

**Usage:**

```
obj = withinPeriod(s, a_period)
```

**Parameters:**

s: A spikes object.

a\_period: The desired period

**Returns:**

obj: A spikes object

**See also:** [spikes](#) (p. 227), [period](#) (p. 162)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2004/07/31

---

**A.47.22 Method spikes/withinPeriodWOffset**

**Summary:** Returns a spikes object valid only within the given period, keeps the offset.

**Usage:**

```
obj = withinPeriodWOffset(s, a_period)
```

**Parameters:**

s: A spikes object.

a\_period: The desired period

**Returns:**

obj: A spikes object

**See also:** [spikes](#) (p. 227), [period](#) (p. 162)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2005/05/09

---

## A.48 Class `spikes_db`

### A.48.1 Constructor `spikes_db/spikes_db`

**Summary:** A database of spike shape results obtained from a period in a trace.

**Usage:**

```
a_spikes_db = spikes_db(data, col_names, a_trace, a_period, id, props)
```

**Description:** This is a subclass of `tests_db`. Use `trace/analyzeSpikesInPeriod` to get an instance of this class.

**Parameters:**

`data`: Database contents.  
`col_names`: The column names.  
`a_trace`: The trace where the spikes were found.  
`a_period`: The period inside `a_trace` where spikes were found.  
`id`: An identifying string.  
`props`: A structure with any optional properties.

**Returns a structure object with the following fields:**

`tests_db`, `trace`, `period`, `props`.

**See also:** [tests\\_db](#) (p. 255), [trace](#) (p. 316), [period](#) (p. 162), [trace/analyzeSpikesInPeriod](#) (p. 318)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2005/08/17

---

### A.48.2 Method `spikes_db/plot_abstract`

**Summary:** Visualizes the `spikes_db` by marking spike shapes measurements on the trace plot.

**Usage:**

```
a_pm = plot_abstract(a_db, title_str, props)
```

**Parameters:**

`a_db`: A `spikes_db` object.  
`title_str`: (Optional) A string to be concatenated to the title.  
`props`: A structure with any optional properties passed to `trace/plotData`.

**Returns:**

`a_pm`: A trace plot.

See also: [plot\\_abstract/plot\\_abstract](#) (p. 180), [tests\\_db/plot\\_abstract](#) (p. 297), [plotFigure](#) (p. ??)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2005/08/17

---

## A.49 Class `sql_portal`

### A.49.1 Constructor `sql_portal/sql_portal`

**Summary:** For import and export to external SQL engines using the Matlab Database Toolbox.

**Usage:**

```
obj = sql_portal(db_conn, id, props)
```

**Description:** Uses the Database (DB) Toolbox's connection object to read and write to external SQL engines.

**Parameters:**

`db_conn`: An object of the database class of the DB Toolbox.

`id`: An identifying string.

`props`: A structure with any optional properties.

**Returns a structure object with the following fields:**

`db_conn`: The DB Toolbox connection object. `id`, `props`.

See also: [tests\\_db](#) (p. 255), [database](#) (p. ??)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2007/11/29

---

### A.49.2 Method `sql_portal/get`

**Summary:** Defines generic attribute retrieval for objects.

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/09/14

---

### A.49.3 Method `sql_portal/sql_statement`

**Summary:** Run an SQL statement and discard its results.

**Usage:**

```
response_str = sql_statement(a_sql_portal, statement_string, props)
```

**Description:** This function is for sending SQL statements that do not return any data, for such functions as inserting data into a database, creating views, and running administration commands. See `sql_portal/tests_db` to import select query results into Pandora.

**Parameters:**

`a_sql_portal`: A `sql_portal` object.  
`statement_string`: An SQL statement that does not return data.  
`props`: A structure with any optional properties.

**Returns:**

`response_str`: Response string from the SQL engine.

**See also:** [sql\\_portal/tests\\_db](#) (p. 239), [database](#) (p. ??)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2008/04/18

---

### A.49.4 Method `sql_portal/sql_table`

**Summary:** Create an SQL table from the contents of a `tests_db` object.

**Usage:**

```
sql_table(a_sql_portal, a_tests_db, table_label, props)
```

**Description:** Converter function to get a `tests_db` object properly annotated with the metadata obtained from the results of the executed SQL query. Currently this function is limited to importing numeric data only.

**Parameters:**

`a_sql_portal`: A `sql_portal` object.  
`a_tests_db`: A `tests_db` object.  
`table_label`: Name of the newly created table.  
`props`: A structure with any optional properties.

**Returns:**

**See also:** [tests\\_db/tests\\_db](#) (p. 255), [database](#) (p. ??), [sql\\_portal/tests\\_db](#) (p. 239)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2008/12/17

---

### A.49.5 Method `sql_portal/subsref`

**Summary:** Defines generic indexing for objects.

---

### A.49.6 Method `sql_portal/tests_db`

**Summary:** Create a `tests_db` object from the results of a SQL query.

**Usage:**

```
a_db = tests_db(a_sql_portal, query_string, query_id, props)
```

**Description:** Converter function to get a `tests_db` object properly annotated with the metadata obtained from the results of the executed SQL query. Currently this function is limited to importing numeric data only.

**Parameters:**

`a_sql_portal`: A `sql_portal` object.

`query_string`: An SQL query returning numeric results.

`query_id`: Identifier associated with the query, to be passed into the `tests_db` object.

`props`: A structure with any optional properties passed to `tests_db`.

**Returns:**

`a_db`: A `tests_db` object.

**See also:** [tests\\_db](#) (p. 255), [database](#) (p. ??)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2007/11/29

---

## A.50 Class `stats_db`

### A.50.1 Constructor `stats_db/stats_db`

**Summary:** A database of rows corresponding to statistical distribution properties of tests. Multiple pages can be used to indicate another dimension.

**Usage:**

```
a_stats_db = stats_db(test_results, col_names, row_names, page_names, id, props)
```

**Description:** This is a subclass of `tests_3D_db`. Allows generating a plot, etc.

**Parameters:**

`test_results`: The 3-d array of rows, columns, and pages. Will\*/  
also accept a `tests_db` object, but `row_names` must also be supplied.

**col\_names:** Test names in this db.  
**row\_names:** Statistical test names for each row (e.g., mean, STD, SE, etc.)  
**page\_names:** Meaning of each separate page of data  
(e.g., a different invariant parameter).  
**id:** An identifying string.  
**props:** A structure with any optional properties.  
**axis\_limits:** Limits in the form of [xmin xmax ymin ymax]  
for errorbar axes.  
**yTicksPos:** 'left' means only put y-axis ticks to leftmost plot.  
**xTicksPos:** 'bottom' means only put x-axis ticks to lowest plot.

**Returns a structure object with the following fields:**

tests\_3D\_db.

**See also:** [tests\\_3D\\_db](#) (p. 246), [plot\\_abstract](#) (p. 180)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2004/10/07

---

### A.50.2 Method stats\_db/compareStats

**Summary:** Merges multiple stats\_dbs into pages of a single stats\_db for comparison.

**Usage:**

```
a_mult_stats_db = compareStats(a_stats_db, a_2nd_stats_db, ...)
```

**Description:** Generates a plot\_simple object from this histogram.

**Parameters:**

**a\_stats\_db:** A stats\_db object.

**Returns:**

a\_mult\_stats\_db: A multi-page stats\_db.

**See also:** [plot\\_abstract](#) (p. 180), [plot\\_simple](#) (p. 193)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2004/10/08

---

### A.50.3 Method stats\_db/get

**Summary:** Defines generic attribute retrieval for objects.

**Author:** Cengiz Gunay jcgunay@emory.edu, 2004/09/14

---

#### A.50.4 Method `stats_db/onlyRowsTests`

**Summary:** Returns a `tests_db` that only contains the desired tests and rows (and pages).

**Usage:**

```
obj = onlyRowsTests(obj, rows, tests, pages)
```

**Description:** Selects the given dimensions and returns in a new `tests_db` object.

**Parameters:**

`obj`: A `tests_db` object.  
`rows`: A logical or index vector of rows. If `':'`, all rows.  
`tests`: Cell array of test names or column indices. If `':'`, all tests.  
`pages`: (Optional) A logical or index vector of pages. `':'` for all pages.

**Returns:**

`obj`: The new `tests_db` object.

**See also:** [subsref](#) (p. ??), [tests\\_db](#) (p. 255)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/09/17

---

#### A.50.5 Method `stats_db/plotColorVar`

**Summary:** Create a color-plot of parameter-test variations in a matrix.

**Usage:**

```
a_plot = plotColorVar(p_stats, props)
```

**Description:** Skips the 'ItemIndex' test.

**Parameters:**

`p_stats`: Array of invariant parameter databases obtained from calling `tests_3D_db/paramsTestsHistsStats`.  
`title_str`: (Optional) String to append to plot title.  
`props`: A structure with any optional properties, passed to `plot_stack`.  
`plotMethod`: 'plotVar' uses `stats_db/plotVar` (default)  
'plot\_bars' uses `stats_db/plot_bars`

**Returns:**

`a_plot`: A `plot_abstract` with the color plot

**See also:** [paramsTestsHistsStats](#) (p. ??), [params\\_tests\\_profile](#) (p. 162), [plotVar](#) (p. ??)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/10/17

---

#### A.50.6 Method stats\_db/plotVar

**Summary:** Generates a plot of the variation between two tests.

**Usage:**

```
a_plot = plotVar(a_stats_db, test1, test2, props)
```

**Description:** Creates a plot description where the mean values are used for solid lines and the std values of test2 is indicated with errorbars. It is assumed that each page of the stats\_db contains a value to be matched.

**Parameters:**

**a\_stats\_db:** A stats\_db object.

**test1:** Test column for the x-axis, only mean values are used.

**test2:** Test column for the y-axis, std values are indicated with errorbars.

**title\_str:** (Optional) String to append to plot title.

**props:** Optional properties.

**plotType:** 1, only errorbars (default); 2, errorbars extending from bars.

**quiet:** If 1, only display given title\_str.  
(rest passed to plot\_abstract)

**Returns:**

a\_plot: A plot\_abstract object or one of its subclasses.

**See also:** [plotVar](#) (p. ??), [plot\\_simple](#) (p. 193)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/10/13

---

#### A.50.7 Method stats\_db/plotVarMatrix

**Summary:** Create a stack of parameter-test variation plots organized in a matrix.

**Usage:**

```
a_plot_stack = plotVarMatrix(p_stats, props)
```

**Description:** Skips the 'ItemIndex' test.

**Parameters:**

**p\_stats:** Array of invariant parameter databases obtained from calling tests\_3D.db/paramsTestsHistsStats.

**props:** A structure with any optional properties, passed to plot\_stack.

**plotMethod:** 'plotVar' uses stats\_db/plotVar (default)  
'plot\_bars' uses stats\_db/plot\_bars

**rotateYLabel:** Rotate row labels this much (default=60).

**Returns:**

**a\_plot\_stack:** A plot\_stack with the plots organized in matrix form

**See also:** [paramsTestsHistsStats](#) (p. ??), [params\\_tests\\_profile](#) (p. 162), [plotVar](#). (p. ??)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2004/10/17

---

### A.50.8 Method stats\_db/plotYTests

**Summary:** Create an errorbar plot of database stats measures against given X-axis values.

**Usage:**

```
a_p = plotYTests(a_stats_db, x_vals, tests, axis_labels, title_str, short_title, command, props)
```

**Parameters:**

**a\_stats\_db:** A params\_tests\_db object.

**x\_vals:** A vector of X-axis values.

**tests:** A vector or cell array of columns to correspond to each value from x\_vals.

**title\_str:** (Optional) A string to be concatenated to the title.

**short\_title:** (Optional) Few words that may appear in legends of multiplot.

**command:** (Optional) Command to do the plotting with (default: 'plot')

**props:** A structure with any optional properties.

**LineStyle:** Plot line style to use. (default: 'd-')

**quiet:** If 1, don't include database name on title.

**Returns:**

**a\_p:** A plot\_abstract.

**Example:**

```
>> a_p = plotYTests(a_stats_db, [0 40 100 200], ...  
'IniSpontSpikeRateISI_0pA', 'PulseIni100msSpikeRateISI_D40pA', ...  
'PulseIni100msSpikeRateISI_D100pA', 'PulseIni100msSpikeRateISI_D200pA', ...  
'current pulse [pA]', 'firing rate [Hz]', '', 'f-I curves', 'neuron 1');  
>> plotFigure(a_p);
```

**See also:** [plotFigure](#) (p. ??)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2006/01/23

---

#### A.50.9 Method stats\_db/plot\_abstract

**Summary:** Generates an error bar graph for each db columns.

**Usage:**

```
a_plot = plot_abstract(a_stats_db, title_str, props)
```

**Description:** Generates a plot\_simple object from this histogram. Looks for 'mean', 'min', 'max', and 'STD' labels in the row\_idx for drawing the errorbars. Each column of a\_stats\_db is shown in a separate axis. Values from multiple pages of a\_stats\_db are shown as distinct points in the axis.

**Parameters:**

a\_stats\_db: A histogram\_db object.

title\_str: A title string on the plot

props: A structure with any optional properties.

**Returns:**

a\_plot: A object of plot\_abstract or one of its subclasses.

**See also:** [plot\\_abstract](#) (p. 180), [plot\\_simple](#) (p. 193)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2004/10/08

---

#### A.50.10 Method stats\_db/plotBars

**Summary:** Creates a bar graph with errorbars for each db column.

**Usage:**

```
a_plot = plotBars(a_stats_db, title_str, props)
```

**Description:** Looks for 'min', 'max', and 'STD' labels in the row\_idx for drawing the errorbars. Each page of the DB will produce grouped bars.

**Parameters:**

a\_stats\_db: A stats\_db object.

title\_str: The plot title.

props: A structure with any optional properties.

pageVariable: The column used for denoting page values.

axis\_limits: Passed as argument to plotBars/plotBars.  
(passed to plotBars/plotBars)

**Returns:**

a\_plot: A object of plotBars or one of its subclasses.

**See also:** [plot\\_abstract](#) (p. 180), [plot\\_bars/plot\\_bars](#) (p. 187)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/10/08

---

#### A.50.11 Method `stats_db/plot_bars_ax`

**Summary:** Bar plot with extending errorbars for all columns in the same axis.

**Usage:**

```
a_plot = plot_bars_ax(a_tests_db, row, props)
```

**Description:** Differs from `stats_db/plot_bars` because it does not open a new axis for each column. This is only suitable if all columns have similar extents.

**Parameters:**

`a_stats_db`: A `stats_db` object.

`title_str`: Optional title string.

`props`: A structure with any optional properties.

`putLabels`: Put special column name labels.

**Returns:**

`a_plot`: A `plot_abstract` object that can be plotted.

**See also:** [plot\\_abstract](#) (p. 180), [plotFigure](#) (p. ??), [stats\\_db/plot\\_bars](#) (p. 244)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2008/04/17

---

#### A.50.12 Method `stats_db/set`

**Summary:** Generic method for setting object attributes.

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/10/08

---

#### A.50.13 Method `stats_db/subsref`

**Summary:** Defines generic indexing for objects.

---

## A.51 Class `tests_3D_db`

### A.51.1 Constructor `tests_3D_db/tests_3D_db`

**Summary:** A database multiple pages with rows of test columns. Each page may represent aspects of the data that are different, but not defined in this object.

**Usage:**

```
a_3D_db = tests_3D_db(data, col_names, row_names, page_names, id, props)
```

**Description:** This is a subclass of `tests_db`. Usually it contains a `RowIndex` column that points to an original db from which this data originated. The row indices can be used to reach the values associated with different pages of information contained in this object.

**Parameters:**

**data:** The 3-d vector of rows, columns, and pages.  
**col\_names:** Column names of the database.  
**id:** An identifying string.  
**props:** A structure with any optional properties.  
**invarName:** Name of the invariant parameter for this db.

**Returns a structure object with the following fields:**

`tests_db`, `page_idx`.

**See also:** [tests\\_db](#) (p. 255), [tests\\_db/invarValues](#) (p. 275)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/09/30

---

### A.51.2 Method `tests_3D_db/addPages`

**Summary:** Inserts new pages (third dimension) to a `tests_3D_db` object.

**Description:** Adds new third dimension pages to the database and returns the new DB. Usage 2 concatenates two DBs pagewise. This operation is expensive in the sense that the whole database matrix needs to be enlarged just to add a single new page. The method of allocating a matrix, filling it up, and then providing it to the `tests_db` constructor is the preferred method of creating `tests_db` objects. This method may be used for measures obtained by operating on raw measures.

**Parameters:**

**obj, b\_obj:** A `tests_db` object.  
**page\_names:** A single string or a cell array of page names to be added.  
**page\_data:** Data matrix of pages to be added.

**Returns:**

obj: The tests\_db object that includes the new columns.

**See also:** [tests\\_db](#) (p. 255)

**Author:** Cengiz Gunay [icengique@users.sf.net](mailto:icengique@users.sf.net), 2017/06/08

---

**A.51.3 Method tests\_3D\_db/corrCoefs**

**Summary:** Calculates correlation coefficients by comparing col1 with other cols.

**Usage:**

```
a_coefs_db = corrCoefs(db, col1, cols, props)
```

**Description:** If db has multiple pages, then each page in db produces a row of coefficients and matching PageIndex. Assuming the db was created with invarValues, this function finds the invariant correlation coefficients between its columns. The invariant correlation coefficients are the correlation of one column value with another column value when some other column values are fixed. Since there are many occurrences of the invariant coefficients, a histogram can then be created and returned from the created db. The other columns that are fixed are not in this db object, but can be reached using the indices to the original db. The page number is saved in the created db, so that it can be used to find the page from which the coefficient came. Then row indices of the page points to original constant column values.

**Parameters:**

db: A tests\_db object.

col1: Column to compare.

cols: Columns to be compared with col1.

props: A structure with any optional properties.

skipCoefs: If 1, coefficients of less confidence than  
will be skipped. (default=1)

**Returns:**

a\_coefs\_db: A corrcoefs\_db of the coefficients and page indices.

**See also:** [tests\\_db](#) (p. 255), [corrcoefs\\_db](#) (p. 83)

**Author:** Cengiz Gunay [icgunay@emory.edu](mailto:icgunay@emory.edu), 2004/09/30

---

### A.51.4 Method `tests_3D_db/diff2D`

**Summary:** Creates a `tests_db` by taking the derivative of the given test.

**Usage:**

```
a_tests_db = diff2D(a_db, test, props)
```

**Description:** Applies the `diff` function to the chosen test, and collapses the middle dimension of the 3D DB to create a 2D DB and transposes it. The result is that the pages of the 3D DB becomes the rows of the new database, and the differenced rows appear as new columns, each named uniquely. The column index would corresponds to the row index in the 3D DB. A new column 'PageNumber' is appended to point back to the 3D DB.

**Parameters:**

`a_db`: A `tests_3D_db` object.

`test`: Test column.

`props`: Optional properties.

**Returns:**

`a_tests_db`: A `tests_db` that holds the requested differences of parameter values.

**See also:** [boxplot](#) (p. ??), [plot\\_abstract](#) (p. 180)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2005/05/22

---

### A.51.5 Method `tests_3D_db/display`

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/08/04

---

### A.51.6 Method `tests_3D_db/flattenPages`

**Summary:** Convert from 3D to 2D by simply flattening pages.

**Usage:**

```
a_db = flattenPages(a_db)
```

**Description:** Allows to get the original database after doing `invarValues` or `invarParams` and then using `joinRows`.

**Parameters:**

`a_db`: A `tests_3D_db` object.

**Returns:**

a\_db: A tests\_db object.

**See also:** [tests\\_db/invarValues](#) (p. 275), [params\\_tests\\_db/invarParams](#) (p. 144), [tests\\_db/joinRows](#) (p. 277)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2014/05/07

---

**A.51.7 Method tests\_3D\_db/get**

**Summary:** Defines generic attribute retrieval for objects.

**Author:** Cengiz Gunay jcgunay@emory.edu, 2004/09/14

---

**A.51.8 Method tests\_3D\_db/histograms**

**Usage:**

```
a_histogram_db = histogram(db, col, num_bins)
```

**Description:** If one wants to get histograms of test values for each single value of the selected invariant parameter, then swapRowsPages should be done first on db.

**Parameters:**

db: A tests\_3D\_db object.

col: Column to find the histogram.

num\_bins: Number of histogram bins (Optional, default=100)

**Returns:**

a\_histogram\_db: A histogram\_db object containing the histogram.

**See also:** [histogram\\_db](#) (p. 100), [tests\\_db](#) (p. 255)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2004/10/04

---

**A.51.9 Method tests\_3D\_db/joinPages**

**Summary:** Joins the rows of the given db to the with\_db rows matching with the PageIndex column.

**Usage:**

```
a_db = joinPages(db, with_db)
```

**Description:** Replicates the desired columns in the `with_db` with rows having a page index and joins them next to desired columns from the current 3D\_db. Flattens the resulting 3D\_db to become a 2D db. Assumes each page index only appears once in `with_db`.

**Parameters:**

`db`: A `tests_3D_db` object.

`with_db`: A `tests_db` object with a `PageIndex` column.

**Returns:**

`a_db`: A `tests_db` object.

**See also:** [tests\\_db](#) (p. 255)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/10/15

---

### A.51.10 Method `tests_3D_db/mergePages`

**Summary:** Merges tests from separate pages into a 2D `params_tests_db`.

**Usage:**

```
a_db = mergePages(db, page_tests, page_suffixes)
```

**Description:** Keeps uniqueness by adding suffixes to test names. If you're using `invarParams`, do `swapRowsPages`, then use `joinRows` with original `db` to get the parameter values.

**Parameters:**

`db`: A `tests_3D_db` object.

`page_tests`: Cell array of list of tests to take from each page.

`page_suffixes`: Cell array of suffixes to append to tests from each page.

**Returns:**

`a_db`: A `tests_db` object.

**See also:** [tests\\_db](#) (p. 255), [tests\\_3D\\_db](#) (p. 246), [tests\\_db/joinRows](#) (p. 277)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2005/01/13

---

#### A.51.11 Method `tests_3D_db/onlyRowsTests`

**Summary:** Returns a `tests_db` that only contains the desired tests and rows (and pages).

**Usage:**

```
obj = onlyRowsTests(obj, rows, tests, pages)
```

**Description:** Selects the given dimensions and returns in a new `tests_db` object.

**Parameters:**

`obj`: A `tests_db` object.

`rows, tests`: A logical or index vector of rows, or cell array of names of rows. If `':'`, all rows. For names, regular expressions are supported if quoted with slashes (e.g., `'a.*'`). See `tests2idx`.

`pages`: (Optional) A logical or index vector of pages. `':'` for all pages.

**Returns:**

`obj`: The new `tests_db` object.

**See also:** [subsref](#) (p. ??), [tests\\_db](#) (p. 255), [tests2idx](#) (p. ??), [regexp](#) (p. ??)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/09/17

---

#### A.51.12 Method `tests_3D_db/paramsTestsHistsStats`

**Summary:** Calculates histograms and statistics for DB.

**Usage:**

```
[pt_hists, p_stats] = paramsTestsHistsStats(p_t3ds, props)
```

**Description:** Calculates histograms and statistics for all combinations of tests and params and returns them in a cell array. Skips the 'ItemIndex' test.

**Parameters:**

`p_t3ds`: Array of invariant parameter databases obtained by calling the `params_tests_db/invarParams` method.

`props`: Optional properties.

`statsMethod`: method to call to get a `stats_db` (default=`'statsMeanSE'`)

`useDiff`: If 1, takes the derivative with `diff` on the 3D DBs (default=0).

**Returns:**

`pt_hists`: An array of 3D histograms for each pair of param and test. `p_stats`: An array of `stats_dbs` for each param.

**See also:** [invarParams](#) (p. ??), [params\\_tests\\_profile](#) (p. 162)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/10/17

---

### A.51.13 Method `tests_3D_db/plotParamPairImage`

**Summary:** Generates an image plot of variation of a test with two parameters in the first page.

**Usage:**

```
a_plot = plotParamPairImage(a_db, test, title_str, props)
```

**Description:** It is assumed that the 3D DB is created by invariant combinations of two parameters, which are the first two columns. Each page of the db must contain a same parameter values. This is the default character of `tests_3D_db` created by `params_tests_db/invarParam`. Parameter values will be enumerated and then an image plot is created.

**Parameters:**

`a_db`: A `tests_3D_db` object.

`test`: Test column to take the measure value.

`title_str`: (Optional) String to append to plot title.

`props`: Optional properties to be passed to `plot_abstract`.

`truncateDecDigits`: Truncate labels to this many decimal digits.

`labelSteps`: Skip this many labels between ticks to reduce to total number.

`maxValue`: Maximal value to normalize colors and to annotate the colorbar.

**Returns:**

`a_plot`: A `plot_abstract` object or one of its subclasses.

**Example:**

Find relationship of two parameters against a measure:

```
>> plotFigure(plotParamPairImage(invarParam(a_db, 'NaF', 'KCNQ'),  
'PulseIni100msRest2SpikeRateISI_D100pA'));
```

**See also:** [params\\_tests\\_db/invarParam](#) (p. 144), [plotImage](#) (p. ??), [plot\\_abstract](#). (p. ??)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/11/10

---

### A.51.14 Method `tests_3D_db/plotScatter`

**Summary:** Superpose scatter plots for each page of the database of the given two tests.

**Usage:**

```
a_p = plotScatter(a_db, test1, test2, title_str, short_title, props)
```

**Description:** If 'warning on verbose' is issued before this, it will display regression statistics:  $R^2$ , F, p, and the error variance.

**Parameters:**

**a\_db:** A tests\_3D\_db object.  
**test1, test2:** X & Y variables.  
**title\_str:** (Optional) A string to be concatenated to the title.  
**short\_title:** (Optional) Few words that may appear in legends of multiplot.  
**props:** A structure with any optional properties.  
    **LineStyle:** Plot line style to use. (default: 'x')  
    **Regress:** If exists, use these props for plotting the linear regression.  
    **quiet:** If 1, don't include database name on title.  
        (all passed to tests\_db/plotScatter)

**Returns:**

a\_p: A plot\_abstract.

**See also:** [tests\\_db/plotScatter](#) (p. 290)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2005/09/29

---

### A.51.15 Method tests\_3D\_db/plotVarBox

**Summary:** Generates a boxplot of the variation between two tests.

**Usage:**

```
a_plot = plotVarBox(a_db, test1, test2, notch, sym, vert, whis, props)
```

**Description:** It is assumed that each page of the db contains a different parameter value.

**Parameters:**

**a\_db:** A tests\_3D\_db object.  
**test1:** Test column for the x-axis, only mean values are used.  
**test2:** Test column for the y-axis, used for boxplot.  
**notch, sym, vert, whis:** See boxplot, defaults = (1, '+', 1, 1.5).  
**props:** Optional properties to be passed to plot\_abstract.

**Returns:**

a\_plot: A plot\_abstract object or one of its subclasses.

**See also:** [boxplot](#) (p. ??), [plot\\_abstract](#) (p. 180)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2004/11/10

---

### A.51.16 Method `tests_3D_db/renamePages`

**Summary:** Rename one or more existing pages.

**Usage:**

```
a_db = renamePages(a_db, old_names, new_names)
```

**Description:** This is a cheap operation than modifies meta-data kept in object. For the regular expression renaming, the `old_names` and `new_names` parameters are passed to the `regexprep` command after removing the delimiting slashes (`//`). At least one grouping construct (`()`) must be used in the search pattern such that it can be used in the replacement pattern (e.g., `'1'`). *See example above. This function uses the generic `renameIdx` that can*

**Parameters:** `a_db`: A `tests_db` object.

`old_names`: A cell array of existing names, array of numerical indices, or a regular

expression denoted between slashes (e.g., `'/(.*)/'`).

`new_names`: New names to replace existing ones OR regular expression replace string (no slashes, e.g., `'1_test'`). *See `regexprep` command.*

`a_db`: The `tests_db` object that includes the new pages.

```
>> new_db = renamePages(a_db, 'PulseIni100msSpikeRateISI.D40pA', 'Firing_rate');
>> new_db = renamePages(a_db, 1, 'Firing_rate');
>> new_db = renamePages(a_db, '/(.*)/', '1_old');
>> new_db = renamePages(a_db, 'a', 'b', 'c', 'd');
renameIdx (p. ??), regexprep (p. ??), allocateRows (p. ??), tests_db (p. 255)
Cengiz Gunay jcgunay@emory.edu, 2017/06/09
```

---

### A.51.17 Method `tests_3D_db/set`

**Summary:** Generic method for setting object attributes.

**Author:** Cengiz Gunay jcgunay@emory.edu, 2004/10/08

---

### A.51.18 Method `tests_3D_db/swapColsPages`

**Summary:** Swaps the column dimension with the page dimension of the `tests_3D_db`.

**Usage:**

```
a_3D_db = swapColsPages(db)
```

**Parameters:**

db: A tests\_db object.

**Returns:**

a\_3D\_db: A tests\_3D\_db object.

**See also:** [tests\\_db](#) (p. 255)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2017/06/09

---

**A.51.19 Method** tests\_3D\_db/swapRowsPages

**Summary:** Swaps the row dimension with the page dimension of the tests\_3D\_db.

**Usage:**

```
a_3D_db = swapRowsPages(db)
```

**Description:** Assuming that this is a invariant parameter and tests relations db, this function transposes the data matrix by swapping the pages with rows. Each resulting page correspond to a single value of the chosen parameter, with each row containing a test result with different combinations of the rest of the parameters.

**Parameters:**

db: A tests\_db object.

**Returns:**

a\_3D\_db: A tests\_3D\_db object.

**See also:** [tests\\_db](#) (p. 255)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/10/04

---

**A.52 Class** tests\_db

**A.52.1 Constructor** tests\_db/tests\_db

**Summary:** Construct a numeric database organized in a matrix format.

**Usage:**

```
obj = tests_db(test_results, col_names, row_names, id, props)
```

**Description:** This is the base database class. Note for loading text files: Matlab's dlmread commands is used, and it is unable to handle files that have any non-numeric data (except skipped rows). Therefore, those files are best filtered with outside tools before importing.

**Parameters:**

**test\_results:** Either a text file (e.g., CSV) name or a matrix that contains measurement columns and separate observations as rows.

**col\_names:** Cell array of column names of test\_results.

**row\_names:** Cell array of row names of test\_results.

**id:** An identifying string.

**props:** A structure with any optional properties.

**textDelim:** Delimiter in text file to be used by dlmread (Default: ',' for CSV). Use ' ' for all whitespace, '\t' for tabs.

**csvArgs:** Cell array of arguments passed to dlmread function (e.g., R, C, [r1 c1 r2 c2]) for (R)ow and (C)olumn offset/range to read.

**csvReadColNames:** If 1, first row of the file or at the given offset (see csvArgs) is used to read column names. Double quotes must be used consistently.

**paramDescFile:** Load parameter names from file (one line per name).

**Returns a structure object with the following fields:**

**data:** The data matrix. **row\_idx, col\_idx:** Structure associating row/column names to indices. **id, props.**

**See also:** [params\\_tests\\_db](#) (p. 138), [dlmread](#) (p. ??)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2004/09/01

---

### A.52.2 Method tests\_db/abs

**Summary:** Take absolute value of all db elements.

**Usage:**

```
a_db = abs(left_obj)
```

**Parameters:**

**left\_obj:** A tests\_db object.

**Returns:**

**a\_db:** The resulting tests\_db.

**See also:** [abs](#) (p. ??), [uop](#) (p. ??)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2008/01/16

---

### A.52.3 Method `tests_db/addColumns`

**Summary:** Inserts new columns to `tests_db`.

**Description:** Adds new test columns to the database and returns the new DB. Usage 2 concatenates two DBs columnwise. This operation is expensive in the sense that the whole database matrix needs to be enlarged just to add a single new column. The method of allocating a matrix, filling it up, and then providing it to the `tests_db` constructor is the preferred method of creating `tests_db` objects. This method may be used for measures obtained by operating on raw measures.

**Parameters:**

`obj`, `b_obj`: A `tests_db` object.

`test_names`: A single string or a cell array of test names to be added.

`test_columns`: Data matrix of columns to be added.

**Returns:**

`obj`: The `tests_db` object that includes the new columns.

**See also:** [allocateRows](#) (p. ??), [tests\\_db](#) (p. 255)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2005/09/30

---

### A.52.4 Method `tests_db/addLastRow`

**Summary:** Inserts a row of observations at the end of `tests_db`.

**Usage:**

```
index = addLastRow(obj, row)
```

**Description:** Adds a new set of observations to the database and returns its row index. This operation is expensive because the whole database matrix needs to be duplicated and resized in order to add a single new row. The method of allocating a matrix, filling it up, and then providing it to the `tests_db` constructor is the preferred method of creating `tests_db` objects.

**Parameters:**

`obj`: A `tests_db` object.

`row`: A row vector that contains values for each DB column.

**Returns:**

`obj`: The `tests_db` object that includes the new row.

**See also:** [allocateRows](#) (p. ??), [addRow](#) (p. ??), [tests\\_db](#) (p. 255)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/09/08

---

### A.52.5 Method `tests_db/addPages`

**Summary:** Inserts new pages (third dimension) to a `tests_db` object.

**Description:** Adds new third dimension pages to the database and returns the new DB. Page names are not maintained in `tests_db`; use `tests_3D_db` instead. Usage 2 concatenates two DBs pagewise. This operation is expensive in the sense that the whole database matrix needs to be enlarged just to add a single new page. The method of allocating a matrix, filling it up, and then providing it to the `tests_db` constructor is the preferred method of creating `tests_db` objects. This method may be used for measures obtained by operating on raw measures.

**Parameters:**

`obj`, `b_obj`: A `tests_db` object.

`page_names`: A single string or a cell array of page names to be added. IGNORED in `tests_db`.

`page_data`: Data matrix of pages to be added.

**Returns:**

`obj`: The `tests_db` object that includes the new columns.

**See also:** `tests_db` (p. 255)

**Author:** Cengiz Gunay `icengique@users.sf.net`, 2017/06/08

---

### A.52.6 Method `tests_db/addRow`

**Summary:** Inserts a row of observations to `tests_db` at the given row index.

**Usage:**

```
index = addRow(obj, row, index)
```

**Description:** Adds a new set of observations to the database and returns the new DB. This operation is expensive in the sense that the whole database matrix needs to be copied to be passed to this function just to add a single new row. The method of allocating a matrix, filling it up, and then providing it to the `tests_db` constructor is the preferred method of creating `tests_db` objects.

**Parameters:**

`obj`: A `tests_db` object.

`row`: A row vector that contains values for each DB column.

`index`: The row index.

**Returns:**

`obj`: The `tests_db` object that includes the new row.

**See also:** [addLastRow](#) (p. ??), [allocateRows](#) (p. ??), [tests\\_db](#) (p. 255)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/09/08

---

#### A.52.7 Method `tests_db/allocateRows`

**Summary:** Preallocates a NaN-filled `num_rows` rows in `tests_db`.

**Usage:**

```
obj = allocateRows(obj, num_rows)
```

**Description:** Overwrites the database by allocating a new matrix of the desired number of rows to speed up filling up the data matrix using `assignRowsTests`. Using `addRow` after this operation is still expensive. The method of allocating a matrix, filling it up, and then providing it to the `tests_db` constructor is the preferred method of creating `tests_db` objects.

**Parameters:**

`obj`: A `tests_db` object.

`num_rows`: The predicted number of observations for this `tests_db`.

**Returns:**

`obj`: The new `tests_db` object.

**See also:** [assignRowsTests](#) (p. ??), [addRow](#) (p. ??), [setRows](#) (p. ??), [tests\\_db](#) (p. 255)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/09/08

---

#### A.52.8 Method `tests_db/anyRows`

**Summary:** Returns db rows matching any of the given rows.

**Usage:**

```
idx = anyRows(db, rows)
```

**Description:** The db rows are compared to each row and row indices succeeding any of these comparisons are returned.

**Parameters:**

`db`: A `tests_db` object.

`rows`: Row array, matrix or database to be compared with db rows.

**Returns:**

idx: A logical column vector of matching db row indices. rows\_idx: Indices of rows entries corresponding to each db row. Non-matching entries were left as NaN.

**Example:**

```
>> db(anyRows(db(:, 'trial'), [12; 46; 37]), :)
returns a db with rows having trial equal to any of the given values.
```

**See also:** [compareRows](#) (p. ??), [eq](#) (p. ??), [tests\\_db](#) (p. 255)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/09/17

---

### A.52.9 Method `tests_db/approxMappingLIBSVM`

**Summary:** Approximates the desired input-output mapping using a support vector machine (SVM).

**Usage:**

```
[an_approx_db, an_svm] = approxMappingLIBSVM(a_db, input_cols, output_cols, props)
```

**Description:** Uses the LIBSVM package (<http://www.csie.ntu.edu.tw/~cjlin/libsvm/>). If 'warning on verbose' is issued prior to running, it provides additional debug info.

**Parameters:**

a\_db: A tests\_db object.

input\_cols, output\_cols: Input and output columns to be mapped (see tests2cols for accept column specifications).

props: A structure with any optional properties.

classProbs: 'prob': use probabilistic sampling to normalize prior class probabilities.

kernel: Kernel type (default='poly').

crossFold: n to use in libsvm's n-fold cross-validation (default=0; disabled).

testControl: Ratio of dataset to train the data and rest to test for success (default=0; disabled).

svmCost: Add the -c option to svmOpts with this value.

svmGamma: Add the -g option to svmOpts with this value.

svmOpts: Passed to LIBSVM overwriting default options (see output of svm-train for options; default='-s0 -t2 -d2'). (Rest passed to balanceInputProbs and tests\_db)

**Returns:**

an\_approx\_db: A tests\_db object containing the original inputs and the approximated outputs. an\_svm: The Matlab neural network approximator object.

**Example:**

```
>> [a_class_db, an_svm = approxMappingLIBSVM(my_db, 'NaF', 'Kv3', 'spike_width');
>> plotFigure(plot_superpose(plotScatter(my_db, 'NaF', 'spike_width'),
plotScatter(a_class_db, 'NaF', 'spike_width')))
```

**See also:** [tests\\_db](#) (p. 255), [newff](#) (p. ??)

**Author:** Cengiz Gunay [cgunay@emory.edu](mailto:cgunay@emory.edu), 2007/12/12

---

**A.52.10 Method tests\_db/approxMappingNNet**

**Summary:** Approximates the desired input-output mapping using a Matlab neural network.

**Usage:**

```
[an_approx_db, a_nnet] = approxMappingNNet(a_db, input_cols, output_cols, props)
```

**Description:** Approximates the mapping between the given inputs to outputs using the Matlab Neural Network Toolbox. By default it creates a feed-forward network to be trained with a Levenberg-Marquardt training algorithm (see [newff](#)). Returns and the trained network object and a database with output columns obtained from the approximator. The outputs can then be compared to the original database to test the success of the approximation. If 'warning on verbose' is issued prior to running, it provides additional debug info.

**Parameters:**

a\_db: A tests\_db object.

input\_cols, output\_cols: Input and output columns to be mapped (see [tests2cols](#) for accept column specifications).

props: A structure with any optional properties.

nnetFcn: Neural network classifier function (default='newff')

nnetParams: Cell array of parameters passed to nnetFcn after inputs and outputs.

trainMode: 'batch' or 'incr'.

testControl: Ratio of dataset to train the data and rest to test for success (default=0; disabled).

classProbs: 'prob': use probabilistic sampling to normalize prior class probabilities.

**maxEpochs:** maximum number of epochs to train for.  
(Rest passed to `balanceInputProbs` and `tests_db`)

**Returns:**

`an_approx_db`: A `tests_db` object containing the original inputs and the approximated outputs. `a_nnet`: The Matlab neural network approximator object.

**Example:**

```
>> [a_class_db, a_nnet = approxMappingNNet(my_db, 'NaF', 'Kv3', 'spike_width');  
>> plotFigure(plot_superpose(plotScatter(my_db, 'NaF', 'spike_width'),  
plotScatter(a_class_db, 'NaF', 'spike_width')))
```

**See also:** `tests_db` (p. 255), `newff` (p. ??)

**Author:** Cengiz Gunay `cgunay@emory.edu`, 2007/12/12

---

### A.52.11 Method `tests_db/approxMappingSVM`

**Summary:** Approximates the desired input-output mapping using a support vector machine (SVM).

**Usage:**

```
[an_approx_db, an_svm] = approxMappingSVM(a_db, input_cols, output_cols, props)
```

**Description:** Uses the SVM-KM package (<http://asi.insa-rouen.fr/enseignants/arakotom/toolbox/index.html>). If 'warning on verbose' is issued prior to running, it provides additional debug info.

**Parameters:**

`a_db`: A `tests_db` object.

`input_cols`, `output_cols`: Input and output columns to be mapped  
(see `tests2cols` for accept column specifications).

`props`: A structure with any optional properties.

`classProbs`: 'prob': use probabilistic sampling to normalize  
prior class probabilities.

`kernel`: Kernel type (default='poly').

(Rest passed to `balanceInputProbs` and `tests_db`)

**Returns:**

`an_approx_db`: A `tests_db` object containing the original inputs and the approximated outputs. `an_svm`: The Matlab neural network approximator object.

**Example:**

```
>> [a_class_db, an_svm = approxMappingSVM(my_db, 'NaF', 'Kv3', 'spike_width');  
>> plotFigure(plot_superpose(plotScatter(my_db, 'NaF', 'spike_width'),  
plotScatter(a_class_db, 'NaF', 'spike_width')))
```

**See also:** [tests\\_db](#) (p. 255), [newff](#) (p. ??)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2007/12/12

---

### A.52.12 Method `tests_db/assignRowsTests`

**Summary:** Assign the values to the tests and rows (and pages) of the `tests_db`.

**Usage:**

```
obj = assignRowsTests(obj, val, rows, tests, pages)
```

**Description:** Selects the given dimensions and returns in a new `tests_db` object.

**Parameters:**

`obj`: A `tests_db` object.

`val`: DB object or data matrix to be assigned to the addressed indices.

`rows`: A logical or index vector of rows. If `':'`, all rows.

`tests`: Cell array of test names or column indices. If `':'`, all tests.

`pages`: (Optional) A logical or index vector of pages. `':'` for all pages.

**Returns:**

`obj`: The new `tests_db` object.

**See also:** [subsref](#) (p. ??), [tests\\_db](#) (p. 255)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2006/02/08

---

### A.52.13 Method `tests_db/checkConsistentCols`

**Summary:** Check if two DBs have exactly the same columns.

**Usage:**

```
[col_names, with_col_names] = checkConsistentCols(db, with_db, props)
```

**Parameters:**

`db`: A `tests_db` object.

`with_db`: A `tests_db` object whose column names are checked for consistency.

`props`: A structure with any optional properties.

**useCommon:** Tolerate mismatching column names and only return the common columns.

**Returns:**

col\_names, with\_col\_names: list of column names of each DB.

**See also:** `vertcat` (p. ??), `tests_db` (p. 255)

**Author:** Cengiz Gunay `jcgunay@emory.edu`, 2007/01/18

---

### A.52.14 Method `tests_db/compareRows`

**Summary:** Returns differing rows of db and the given row(s).

**Usage:**

```
[idx, compared] = compareRows(db, rows)
```

**Description:** It can compare all db rows to corresponding row entries or to a single row. For the case with only one entry, returns all db rows that do not match the given row in idx, and the result of the differences in compared. For the case of multiple rows, rows must have exactly same number of rows with db. In both cases, idx must be negated to test for equality.

**Parameters:**

**db:** A `tests_db` object.

**rows:** Row array, matrix or database to be compared with db rows.

**Returns:**

**idx:** A inverted logical column vector of comparison results. (false if db == rows, true otherwise) **compared:** A column vector of differences of each DB row to the given row (i.e., compared = db - rows).

**Example:**

```
>> db(db(:, 'trial') > [12]), :)
calls gt which calls compareRows to check for equality. Returns a db
only containing rows with trial numbers greater than 12.
```

**See also:** `eq` (p. ??), `anyRows` (p. ??), `ge` (p. ??), `gt` (p. ??), `le` (p. ??), `lt` (p. ??), `tests_db` (p. 255)

**Author:** Cengiz Gunay `jcgunay@emory.edu`, 2004/09/17

---

**A.52.15 Method** `tests_db/corrcoef`

**Summary:** Calculates a correlation coefficient matrix by comparing cols.

**Usage:**

```
a_coefs_db = corrcoef(db, cols, props)
```

**Parameters:**

**db:** A `tests_db` object.

**cols:** Columns to be compared.

**props:** A structure with any optional properties.

**skipCoefs:** If 1, coefficients of less confidence than will be skipped. (default=1)

**alpha:** Skip coefs with p values lower than this (default=0.05).

**partialCols:** Columns to calculate partial correlations by controlling for the other columns.

**bonfer:** Bonferroni correction to alpha value.

**resample:** Shuffle columns and resample correlations this many times to get statistics for the null hypothesis.

**Returns:**

**a\_coefs\_db:** A `tests_3D_db` of the coefficient matrix, and their upper/lower limits on different pages.

**See also:** [tests\\_db](#) (p. 255), [corrcoefs\\_db](#) (p. 83), [corrcoef](#) (p. ??), [partialcorr](#) (p. ??)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2008/04/25

---

**A.52.16 Method** `tests_db/cov`

**Summary:** Generates a database of the covariance of given DB.

**Usage:**

```
a_cov_db = cov(db, props)
```

**Parameters:**

**db:** A `tests_db` object.

**props:** A structure with any optional properties.

**keepOrigDB:** Keep db as origDB in the props. (others passed to `tests_db`)

**Returns:**

a\_cov\_db: A tests\_db which contains the covariance matrix.

**See also:** [cov](#) (p. ??)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2007/05/25

---

**A.52.17 Method tests\_db/crossProd**

**Summary:** Create a DB by taking the cross product of two database row sets.

**Usage:**

```
cross_db = crossProd(a_db, b_db)
```

**Description:** This is not a vector cross product operation. Each row of the two DBs are matched and added as a new row to a DB. The end is a DB with all combinations of rows from both DBs. The final DB contains columns of both DBs.

**Parameters:**

a\_db, b\_db: A tests\_db object.

**Returns:**

cross\_db: The tests\_db object with all combinations of rows.

**See also:** [allocateRows](#) (p. ??), [tests\\_db](#) (p. 255)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2005/10/11

---

**A.52.18 Method tests\_db/dbsize**

**Summary:** Returns the size of the data matrix of db.

**Usage:**

```
s = dbsize(db)
```

**Parameters:**

db: A tests\_db object.

**Returns:**

s: The size values.

**See also:** [size](#) (p. ??), [tests\\_db](#) (p. 255)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/10/06

---

**A.52.19 Method** tests\_db/delColumns

**Summary:** Deletes columns from tests\_db.

**Usage:**

```
obj = delColumns(obj, tests)
```

**Description:** Deletes test columns from the database and returns the new DB. This operation is expensive in the sense that the whole database matrix needs to be copied just to delete a single column. The method of allocating a matrix, filling it up, and then providing it to the tests\_db constructor is the preferred method of creating tests\_db objects. This method may be used for measures obtained by operating on raw measures.

**Parameters:**

obj: A tests\_db object.

tests: Numbers or names of tests (see tests2cols)

**Returns:**

obj: The tests\_db object that is missing the columns.

**See also:** [allocateRows](#) (p. ??), [tests\\_db](#) (p. 255)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2005/10/06

---

**A.52.20 Method** tests\_db/diff

**Summary:** Creates a tests\_db by taking the derivative of all tests.

**Usage:**

```
a_db = diff(a_db, props)
```

**Description:** Applies the diff function to whole DB. The resulting DB will have one less row.

**Parameters:**

a\_db: A tests\_db object.

props: Optional properties.

**Returns:**

a\_db: The resulting tests\_db.

**See also:** [diff](#) (p. ??), [tests\\_3D\\_db/getDiff2DDB](#) (p. ??)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2006/05/24

---

**A.52.21 Method** tests\_db/display

**Author:** Cengiz Gunay jcgunay@emory.edu, 2004/08/04

---

**A.52.22 Method** tests\_db/displayRows

**Summary:** Displays rows of data with associated column labels.

**Usage:**

```
s = displayRows(db, rows, pages)
```

**Description:** Use transpose() on db to rotate display.

**Parameters:**

db: A tests\_db object.

rows: Indices of rows in db.

pages: Pages of db.

**Returns:**

s: A cell array of trasposed database contents, prefixed with column names on each row. Meant to be displayed on the screen.

**See also:** tests\_db (p. 255)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2004/09/15

---

**A.52.23 Method** tests\_db/displayRowsCSV

**Summary:** Returns a comma-separated values (CSV) version of the table.

**Usage:**

```
csv_string = displayRowsCSV(a_db, props)
```

**Description:** Uses displayRows. See its documentation for details.

**Parameters:**

a\_db: A tests\_db object.

props: A structure with any optional properties.

**Returns:**

csv\_string: String that can be saved as a file or copy-pasted into other software.

**Example:**

```
>> string2File(displayRowsCSV(a_db(1:10, 4:7)), 'excel-export.csv')
```

**See also:** [displayRows](#) (p. ??), [displayRowsTeX](#) (p. ??)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2011/07/07

---

#### A.52.24 Method `tests_db/displayRowsTeX`

**Summary:** Generates a LaTeX table that lists rows of this DB.

**Usage:**

```
tex_string = displayRowsTeX(a_db, caption, props)
```

**Description:** Can be then written to a file for processing by Latex or inclusion in other documents.

**Parameters:**

`a_db`: A `tests_db` object.

`caption`: Table caption.

`props`: A structure with any optional properties, passed to `TeXfloat`.

`landscape`: If 1, rotate table 90 degrees and scale to 90

**Returns:**

`tex_string`: LaTeX string for table float.

**Example:**

```
>> string2File(displayRowsTeX(a_db(1:10, 4:7), 'some values',  
struct('rotate', 0)), 'table.tex')
```

**See also:** [displayRows](#) (p. ??), [TeXfloat](#) (p. ??), [cell2TeX](#) (p. ??)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/12/16

---

#### A.52.25 Method `tests_db/end`

**Summary:** Overloaded primitive matlab function, returns maximal dimension size.

**Usage:**

```
s = end(db, index, total)
```

**Parameters:**

`db`: A `tests_db` object.

**Returns:**

`s`: The size.

**See also:** [size](#) (p. ??), [tests\\_db](#) (p. 255)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/10/06

---

#### A.52.26 Method `tests_db/enumerateColumns`

**Summary:** Replaces each value with an integer pointing to the index of enumerated unique values in a column.

**Usage:**

```
a_db = enumerateColumns(a_db, tests, props)
```

**Description:** Finds unique values of each column, and replaces the original values with the enumerated indices of these unique values. Useful for normalizing all parameter values in a hypercube.

**Parameters:**

**a\_db:** A `tests_db` object.

**tests:** Array of tests to be enumerated.

**props:** Optional properties.

**truncateDecDigits:** Use only up to this many decimal digits after the point when checking for uniqueness.

**Returns:**

**a\_db:** The modified DB.

**Example:**

```
>> enumerated_db = enumerateColumns(a_db(:, 1:9));
```

**See also:** [uniqueValues](#) (p. ??)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2006/06/14

---

#### A.52.27 Method `tests_db/eq`

**Summary:** Equality (==) operator. Returns logical indices of db rows that match with given row.

**Usage:**

```
rows = eq(db, row)
```

**Parameters:**

**db:** A tests\_db object.

**row:** Row array to be compared with db rows.

**Returns:**

rows: A logical or index vector to be used in indexing db objects.

**See also:** [eq](#) (p. ??), [tests\\_db](#) (p. 255)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2004/09/17

---

**A.52.28 Method tests\_db/factoran**

**Summary:** Generates a database of factor loadings obtained from the factor analysis of db with factoran. Each row corresponds to a rotated factor and columns represent observed variables.

**Usage:**

```
a_factors_db = factoran(db, num_factors, props)
```

**Description:** Uses the promax method to rotate common factors.

**Parameters:**

**db:** A tests\_db object.

**num\_factors:** Number of common factors to look for.

**props:** A structure with any optional properties.

**Returns:**

a\_factors\_db: A corrcoeffs\_db of the coefficients and page indices.

**See also:** [tests\\_db](#) (p. 255), [corrcoeffs\\_db](#) (p. 83)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2004/11/08

---

**A.52.29 Method tests\_db/fillMissingColumns**

**Summary:** Add missing columns with given default fill value.

**Usage:**

```
db = fillMissingColumns(db, col_names, fill_value)
```

**Parameters:**

**db:** A tests\_db object.

**col\_names:** A cell array of column names.

**fill\_value:** Value to be used for missing columns.

**Returns:**

db: The tests\_db object that includes the newly filled columns.

**See also:** [tests\\_db](#) (p. 255), [addColumnns](#) (p. ??), [params\\_tests\\_db/addParams](#) (p. 139), [params\\_tests\\_db/unionCat](#) (p. 154)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2008/06/02

---

### A.52.30 Method tests\_db/ge

**Summary:** Greater or equal to ( $\geq$ ) operator. Returns logical indices of db rows that are greater than or equal to given row.

**Usage:**

```
rows = ge(db, row)
```

**Parameters:**

db: A tests\_db object.

row: Row array to be compared with db rows.

**Returns:**

rows: A logical or index vector to be used in indexing db objects.

**See also:** [ge](#) (p. ??), [tests\\_db](#) (p. 255)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/09/17

---

### A.52.31 Method tests\_db/get

**Summary:** Defines generic attribute retrieval for objects.

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/09/14

---

### A.52.32 Method tests\_db/getColNames

**Summary:** Gets column names.

**Usage:**

```
col_names = getColNames(db, tests)
```

**Description:** Performs a light operation without touching the data matrix.

**Parameters:**

**db:** A tests\_db object.

**tests:** Columns for which to get names (Optional, default = ':')

**Returns:**

**col\_names:** A cell array of strings.

**See also:** [getColNames](#) (p. ??), [tests\\_db](#) (p. 255)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2006/05/24

---

**A.52.33 Method tests\_db/groupBy**

**Summary:** Groups same values of column(s) into separate pages of a 3D db.

**Usage:**

```
a_tests_3D_db = groupBy(db, cols)
```

**Description:** Functionality similar to SQL's GROUP BY keyword. This function uses `invarValues`, but resulting pages will not be sorted.

**Parameters:**

**db:** A tests\_db object.

**cols:** Columns whose same values will be in one page (see `tests2cols` for column representation).

**Returns:**

**a\_tests\_3D\_db:** A tests\_3D\_db object of organized values.

**Example:**

```
>> a_db = tests_db([ ... ], 'par1', 'par2', 'measure1', 'measure2')
>> a_3d_db = groupBy(a_db, 'par1')
>>
>> joined_3d_db = joinRows(a_db, a_3d_db)
>> displayRows(joined_3d_db(:, :, 1))
```

**See also:** [invarValues](#) (p. ??), [tests\\_3D\\_db](#) (p. 246), [tests\\_3D\\_db/corrCoefs](#) (p. 247), [tests\\_3D\\_db/plotPair](#) (p. ??), [joinRows](#) (p. ??), [tests\\_3D\\_db/swapRowsPages](#) (p. 255), [tests\\_3D\\_db/mergePages](#) (p. 250)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2008/05/27

---

**A.52.34 Method** `tests_db/gt`

**Summary:** Greater than (`>`) operator. Returns logical indices of db rows that are greater than given row.

**Usage:**

```
rows = gt(db, row)
```

**Parameters:**

**db:** A `tests_db` object.

**row:** Row array to be compared with db rows.

**Returns:**

**rows:** A logical or index vector to be used in indexing db objects.

**See also:** `gt` (p. ??), `tests_db` (p. 255)

**Author:** Cengiz Gunay `jcgunay@emory.edu`, 2004/09/17

---

**A.52.35 Method** `tests_db/histogram`

**Summary:** Returns histogram of chosen database column.

**Usage:**

```
a_histogram_db = histogram(db, col, num_bins, props)
```

**Description:** Generates a `histogram_db` object with rows corresponding to histogram entries. If an array of DBs is given, finds and uses common histogram bin centers.

**Parameters:**

**db:** A `tests_db` object.

**col:** Column to find the histogram.

**num\_bins:** Number of histogram bins (Optional, default=100), or vector of histogram bin centers.

**props:** A structure with any optional properties.

**normalized:** If 1, normalize histogram counts.

**Returns:**

**a\_histogram\_db:** A `histogram_db` object containing the histogram.

**Example:**

```
>> a_hist_db = histogram(my_db, 'spike_width');  
>> plot(a_hist_db);
```

**See also:** [histogram\\_db](#) (p. 100), [tests\\_db](#) (p. 255), [hist](#) (p. ??)

**Author:** Cengiz Gunay [cgunay@emory.edu](mailto:cgunay@emory.edu), 2004/09/17

---

### A.52.36 Method `tests_db/invarValues`

**Summary:** Finds all sets in which given columns vary while the rest are invariant.

**Usage:**

```
a_tests_3D_db = invarValues(db, cols, in_page_unique_cols, props)
```

**Description:** Useful when trying to find relationships between some columns independent of other columns. In a database that contains results of a multivariate function, this function can find the effect of one or more parameters when other parameters are kept constant (i.e., invariant). Rows with the values of the desired columns are separated into the pages of a `tests_3D_db` for each unique set of the other column values. These invariant values of the other columns are missing from the resulting `tests_3D_db`, instead a `RowIndex` is kept pointing to the db in which they can be found. See `joinRows` for joining the results back with the invariant columns. If `in_page_unique_cols` is given, this function by default row-sorts the database to ensure that each page has the same parameter values in the same rows. This is important because when the rows and pages of database is swapped (see `tests_3D_db/swapRowsPages`) each page has the same value of the `in_page_unique_cols` variables. Other functions such as `tests_3D_db/mergePages` also depend on this property. In databases that contain all unique combinations of certain parameters, the resulting 3D database becomes symmetric. However, for databases with missing combinations, `in_page_unique_cols` specifies which columns is used to guide which rows of the page to place values found. This function will fail if you do not have such a column. Note: the trial column will be ignored before finding invariant values.

**Parameters:**

**db:** A `tests_db` object.

**cols:** Vector of column numbers to find values when others are invariant. Include result columns here.

**in\_page\_unique\_cols:** Vector of columns that have the same unique values in each page

(Optional; used only if database is not symmetric, to ignore missing values of `in_page_unique_cols`)

**props:** A structure with any optional properties.

**sortPages:** If 1, page-sorts even symmetric databases (default=1).

**Returns:**

**a\_tests\_3D\_db:** A `tests_3D_db` object of organized values.

### Example:

```
>> a_db = tests_db([ ... ], 'par1', 'par2', 'measure1', 'measure2')
>> a_3d_db = invarValues(a_db, [2:4], 'par2')
>>
>> joined_3d_db = joinRows(a_db, a_3d_db)
>> displayRows(joined_3d_db(:, :, 1))
```

**See also:** [tests\\_3D\\_db](#) (p. 246), [tests\\_3D\\_db/corrCoefs](#) (p. 247), [tests\\_3D\\_db/plotPair](#) (p. ??), [joinRows](#) (p. ??), [tests\\_3D\\_db/swapRowsPages](#) (p. 255), [tests\\_3D\\_db/mergePages](#) (p. 250)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/09/30

---

### A.52.37 Method `tests_db/isinf`

**Summary:** Returns logical row indices of Inf-valued columns.

#### Usage:

```
rows = isinf(db, col)
```

#### Parameters:

**db:** A `tests_db` object.  
**col:** Column to check (Optional, default = 1)

#### Returns:

**rows:** A logical column vector of rows.

**See also:** [isinf](#) (p. ??), [tests\\_db](#) (p. 255)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2005/08/16

---

### A.52.38 Method `tests_db/isnan`

**Summary:** Returns logical row indices of NaN-valued columns.

#### Usage:

```
rows = isnan(db, col)
```

#### Parameters:

**db:** A `tests_db` object.  
**col:** Column to check (Optional, default = 1)

#### Returns:

**rows:** A logical column vector of rows.

See also: [isnan](#) (p. ??), [tests\\_db](#) (p. 255)

Author: Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/10/06

---

#### A.52.39 Method `tests_db/isnanrows`

**Summary:** Finds rows with any NaN values. Returns logical indices of db rows.

**Usage:**

```
rows = isnanrows(db)
```

**Description:** Some operations need that no NaN values exist in the matrix. This method can be used to find and then remove NaN-contaminated rows from DB. Note that sometimes no rows can be found, and some columns should be discarded before this operation.

**Parameters:**

db: A `tests_db` object.

**Returns:**

rows: A logical vector to be used in indexing db objects or passed through other logical operators.

See also: [isnan](#) (p. ??), [tests\\_db](#) (p. 255)

Author: Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/11/08

---

#### A.52.40 Method `tests_db/joinRows`

**Summary:** Joins a\_db rows with w\_db rows having matching RowIndex values.

**Usage:**

```
a_db = joinRows(a_db, w_db, props)
```

**Description:** Concatenates columns of rows matching the join condition from the two databases. Each row index must appear only once in w\_db. The created db preserves the ordering of w\_db. See the `multipleIndices` option if there are several redundant index columns. Multiple pages in w\_db are accepted (see `keepNaNs` option). This function is the equivalent of a "right outer join" command in SQL, w\_db being the database table on the right.

**Parameters:**

a\_db: A `tests_db` object.

w\_db: A `tests_db` object with a row index column.

**props:** A structure with any optional properties.

**indexColName:** (Optional) Name of row index column (default='RowIndex').

**keepNaNs:** If 1, substitute NaN values for NaN indices. (default=1, for multi-page DBs; 0, otherwise).

**multipleIndices:** If 1, search for substitute RowIndex\* columns for indices with NaN values. It will fail if all indices are NaNs. (default=0)

**keepIndex:** If 1, don't delete the indexColName (default='RowIndex')

**Returns:**

**a\_db:** A tests\_db object.

**See also:** [tests\\_db](#) (p. 255)

**Author:** Cengiz Gunay ;cgunay@emory.edu, 2004/10/16

---

**A.52.41 Method tests\_db/kmeansCluster**

**Summary:** Generates a database of cluster centers obtained from a k-means cluster analysis with the command kmeans.

**Usage:**

```
a_cluster_db = kmeansCluster(db, num_clusters, props)
```

**Parameters:**

**db:** A tests\_db object.

**num\_clusters:** Number of clusters to form.

**props:** A structure with any optional properties.

**DistanceMeasure:** Choose one appropriate for kmeans.

**Returns:**

**a\_cluster\_db:** A tests\_db where each row is a cluster center. **a\_hist\_db:** histogram\_db showing cluster membership from original db. **idx:** Cluster indices of each row or original db. **sum\_distances:** Quality of clustering indicated by total distance from centroid for each cluster.

**See also:** [tests\\_db](#) (p. 255), [histogram\\_db](#) (p. 100)

**Author:** Cengiz Gunay ;cgunay@emory.edu, 2005/04/06

---

**A.52.42 Method** `tests_db/le`

**Summary:** Less or equal (`=`) operator. Returns logical indices of db rows that are less than or equal to given row.

**Usage:**

```
rows = le(db, row)
```

**Parameters:**

**db:** A `tests_db` object.

**row:** Row array to be compared with db rows.

**Returns:**

rows: A logical or index vector to be used in indexing db objects.

**See also:** `le` (p. ??), `tests_db` (p. 255)

**Author:** Cengiz Gunay `jcgunay@emory.edu`, 2004/09/17

---

**A.52.43 Method** `tests_db/lt`

**Summary:** Less than (`<`) operator. Returns logical indices of db rows that are less than given row.

**Usage:**

```
rows = lt(db, row)
```

**Parameters:**

**db:** A `tests_db` object.

**row:** Row array to be compared with db rows.

**Returns:**

rows: A logical or index vector to be used in indexing db objects.

**See also:** `lt` (p. ??), `tests_db` (p. 255)

**Author:** Cengiz Gunay `jcgunay@emory.edu`, 2004/09/17

---

### A.52.44 Method `tests_db/matchingRow`

**Summary:** Creates a criterion database for matching the tests of a row.

**Usage:**

```
crit_db = matchingRow(db, row, props)
```

**Description:** Copies selected test values from row as the first row into the criterion db. Adds a second row for the STD of each column in the db. Calculates the covariance for using the Mahalanobis distance in the ranking.

**Parameters:**

**db:** A `tests_db` object.

**row:** A row index to match.

**props:** A structure with any optional properties.

**distDB:** Take the standard deviation and covariance of this db instead.

**Returns:**

**crit\_db:** A `tests_db` with two rows for values and STDs.

**Example:**

```
>> crit_db = matchingRow(phys_control_compare_db,  
find(phys_control_compare_db(:, 'TracesetIndex') == 61))
```

**See also:** [rankMatching](#) (p. ??), [tests\\_db](#) (p. 255), [tests2cols](#) (p. ??)

**Author:** Cengiz Gunay [cgunay@emory.edu](mailto:cgunay@emory.edu), 2004/12/08

---

### A.52.45 Method `tests_db/max`

**Summary:** Returns the max of the data matrix of a.db. Ignores NaN and Inf values.

**Usage:**

```
[a_db, n, i] = max(a_db, dim)
```

**Description:** Does a recursive operation over dimensions in order to remove NaN and Inf values. This takes more time than a straightforward max operation.

**Parameters:**

**a\_db:** A `tests_db` object.

**dim:** Work down dimension.

**Returns:**

**a\_db:** The DB with one row of max values. **n:** (Optional) Numbers of non-NaN rows included in calculating each column. **i:** Indices where the value was found.

**See also:** `max` (p. ??), `tests_db` (p. 255)

**Author:** Cengiz Gunay <cgunay@emory.edu>, 2004/10/06

---

#### A.52.46 Method `tests_db/mean`

**Summary:** Returns the mean of the data matrix of `a_db`. Ignores NaN values.

**Usage:**

```
[a_db, n] = mean(a_db, dim)
```

**Description:** Does a recursive operation over dimensions in order to remove NaN values. This takes more time than a straightforward mean operation.

**Parameters:**

`a_db`: A `tests_db` object.

`dim`: Work down dimension.

**Returns:**

`a_db`: The DB with one row of mean values. `n`: (Optional) Numbers of non-NaN rows included in calculating each column.

**See also:** `mean` (p. ??), `tests_db` (p. 255)

**Author:** Cengiz Gunay <cgunay@emory.edu>, 2004/10/06

---

#### A.52.47 Method `tests_db/meanDuplicateRows`

**Summary:** Row-reduces a db by finding sets of rows with same `main_cols` values, and replacing each set with a single row containing `main_cols` and the mean of `rest_cols`.

**Usage:**

```
a_tests_db = meanDuplicateRows(db, main_cols, rest_cols)
```

**Description:** The database is sorted for the values of the columns of interest (`main_cols`) and all rows with duplicate values of these columns are identified. The rest of the columns (`rest_cols`) are averaged and reduced to a single row, and attached to the nominal values of `main_cols`. Two additional parameter columns will be added to the database created. The `NumDuplicates` column is the the number of duplicates used in the mean operation, and `RowIndex` is the row number points to the first of a set of duplicate values.

**Parameters:**

**db:** A tests\_db object.

**main\_cols:** Vector of columns in which to find duplicates.

**rest\_cols:** Vector of columns to be averaged for duplicate main\_cols.

**Returns:**

**a\_tests\_db:** The db object of with the means on page 1 and standard deviations on page 2.

**See also:** [tests\\_db/mean](#) (p. 281), [tests\\_db/std](#) (p. 309), [sortedUniqueValues](#) (p. ??)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/09/30

---

### A.52.48 Method tests\_db/min

**Summary:** Returns the min of the data matrix of a\_db. Ignores NaN and Inf values.

**Usage:**

```
[a_db, n, i] = min(a_db, dim)
```

**Description:** Does a recursive operation over dimensions in order to remove NaN and Inf values. This takes more time than a straightforward min operation.

**Parameters:**

**a\_db:** A tests\_db object.

**dim:** Work down dimension.

**Returns:**

**a\_db:** The DB with one row of min values. **n:** (Optional) Numbers of non-NaN rows included in calculating each column. **i:** Indices where the value was found.

**See also:** [min](#) (p. ??), [max](#) (p. ??), [tests\\_db](#) (p. 255)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/10/06

---

### A.52.49 Method tests\_db/minus

**Summary:** Subtracts a DB from another or from a scalar.

**Usage:**

```
a_db = minus(left_obj, right_obj)
```

**Description:** If DBs have mismatching columns only the common columns will be kept. In any case, the resulting DB columns will be sorted in the order of the left-hand-side DB.

**Parameters:**

`left_obj`, `right_obj`: Operands of the subtraction. One must be of type `tests_db` and the other can be a scalar.

**Returns:**

`a_db`: The resulting `tests_db`.

**See also:** `minus` (p. ??)

**Author:** Cengiz Gunay `jcgunay@emory.edu`, 2006/05/24

---

**A.52.50 Method `tests_db/mtimes`**

**Summary:** Multiplies the DB with a scalar.

**Usage:**

```
a_db = mtimes(left_obj, right_obj)
```

**Parameters:**

`left_obj`, `right_obj`: Operands of the multiplication. One or more must be of type `tests_db`.

**Returns:**

`a_db`: The resulting `tests_db`.

**See also:** `tests_db/times` (p. 313), `mtimes` (p. ??)

**Author:** Cengiz Gunay `jcgunay@emory.edu`, 2006/05/24

---

**A.52.51 Method `tests_db/ne`**

**Summary:** Returns logical indices of db rows that doesn't match with given row.

**Usage:**

```
rows = ne(db, row)
```

**Parameters:**

`db`: A `tests_db` object.  
`row`: Row array to be compared with db rows.

**Returns:**

`rows`: A logical or index vector to be used in indexing db objects.

**See also:** [ne](#) (p. ??), [tests\\_db](#) (p. 255)

**Author:** Cengiz Gunay [cgunay@emory.edu](mailto:cgunay@emory.edu), 2004/09/17

---

#### A.52.52 Method `tests_db/noNaNRows`

**Summary:** Returns a DB by removing rows containing any NaN or Inf.

**Usage:**

```
a_db = noNaNRows(a_db)
```

**Parameters:**

`a_db`: A `tests_db` object.

**Returns:**

`a_db`: DB with missing rows.

**See also:** [tests\\_db/isnanrows](#) (p. 277)

**Author:** Cengiz Gunay [cgunay@emory.edu](mailto:cgunay@emory.edu), 2005/09/21

---

#### A.52.53 Method `tests_db/onlyRowsTests`

**Summary:** Returns a `tests_db` that only contains the desired tests and rows (and pages).

**Usage:**

```
obj = onlyRowsTests(obj, rows, tests, pages)
```

**Description:** Selects the given dimensions and returns in a new `tests_db` object.

**Parameters:**

`obj`: A `tests_db` object.

`rows`, `tests`: A logical or index vector of rows, or cell array of names of rows. If `':'`, all rows. For names, regular expressions are supported if quoted with slashes (e.g., `'/a.*/'`). See `tests2idx`.

`pages`: (Optional) A logical or index vector of pages. `':'` for all pages.

**Returns:**

`obj`: The new `tests_db` object.

**See also:** [subsref](#) (p. ??), [tests\\_db](#) (p. 255), [tests2idx](#) (p. ??), [regexp](#) (p. ??)

**Author:** Cengiz Gunay [cgunay@emory.edu](mailto:cgunay@emory.edu), 2004/09/17

---

#### A.52.54 Method `tests_db/physiol_bundle`

**Summary:** Create a `physiol_bundle` from a raw physiology database.

**Usage:**

```
a_bundle = physiol_bundle(phys_dball, phys_dataset, props)
```

**Description:** Removes small bias currents, calculates input resistance by averaging negative CIP traces, averages multiple traces with similar treatments, selects certain CIP levels collapses its rows to create a one-neuron-per-pow database. It includes post-DB calculated columns such as rate ratios between spont and recovery periods.

**Parameters:**

**phys\_dball:** A raw database obtained by loading traces from the tracesets.

**phys\_dataset:** Dataset object passed to `physiol_bundle`.

**props:** Optional parameters.

**weedCols:** Cell array of parameter columns to be weed-out before averaging rows that are same w.r.t other parameters. (default='pulseOn', 'pulseOff', 'traceEnd', 'pAbias', 'ItemIndex').

**drugCols:** Cell array of drug names that need to be zero for the control db (default='TTX', 'Apamin', 'EBIO', 'XE991', 'Cadmium', 'drug\_4AP').

**CIPList:** row array specifying the CIP levels to choose (eliminate the others), default is an empty array, which means to choose all.

**biasLimit:** Limit in pA, biases larger +/- than which will be eliminated. (default=30)

**Returns:**

**phys\_joined\_db:** Final one row per cip and neuron db. **phys\_joined\_control\_db:** Rows where all drug treatments are zero. **phys\_db:** Original db only with parameter and including the weedCols.

**See also:** [physiol\\_bundle](#) (p. 164), [params\\_tests\\_db](#) (p. 138)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2007/12/21

---

#### A.52.55 Method `tests_db/plot`

**Summary:** Generic method to plot a `tests_db` or a subclass. Requires a `plot_abstract` method to be defined for this object.

**Usage:**

```
h = plot(a_tests_db, title_str, props)
```

**Parameters:**

**a\_tests\_db:** A histogram\_db object.  
**title\_str:** (Optional) String to append to plot title.  
**props:** A structure with any optional properties, passed to plot\_abstract.

**Returns:**

**h:** The figure handle created.

**See also:** [plot\\_abstract](#) (p. 180), [plotFigure](#) (p. ??)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/10/06

---

### A.52.56 Method tests\_db/plotBox

**Summary:** Creates a boxplot from each column in tests\_db in separate axes.

**Usage:**

```
a_plot = plotBox(a_tests_db, title_str, props)
```

**Parameters:**

**a\_tests\_db:** A tests\_db object.  
**title\_str:** Optional title.  
**props:** A structure with any optional properties.  
**putLabels:** Put special column name labels.  
**notch:** If 1, put notches on boxplots (default=1).  
**whis:** Whisker size passed to boxplotp (default=1.5);

**Returns:**

**a\_plot:** A plot\_abstract object that can be plotted.

**See also:** [plot\\_abstract](#) (p. 180), [plotFigure](#) (p. ??), [boxplotp](#) (p. ??)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2008/01/16

---

**A.52.57 Method** tests\_db/plotCircular

**Summary:** Circular plot.

**Usage:**

```
a_p = plotCircular(a_db, theta_col, title_str, short_title, props)
```

**Description:** Radius is taken to be constant on the unit circle.

**Parameters:**

**a\_db:** A tests\_db object.

**theta\_col:** Column with angle values to plot on circle.

**title\_str:** (Optional) A string to be concatenated to the title.

**short\_title:** (Optional) Few words that may appear in legends of multiplot.

**props:** A structure with any optional properties.

**avgVector:** If 1, plot an average vector from polar coordinates.

**vectorMarker:** Specify a marker for the average vector (default='').

**radius:** The radius at which angles are plotted (default=1).

**angles1:** If 1, angles are in the range of 0-1, and they will be converted to radians.

**jitter:** Add this much random jitter to radius while plotting.

**quiet:** If 1, don't include database name on title.

**Returns:**

**a\_p:** A plot\_abstract.

**See also:** [polar](#) (p. ??), [pol2cart](#) (p. ??)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2014/07/14

---

**A.52.58 Method** tests\_db/plotCovar

**Summary:** Generates an image plot of the covariance-type values in a\_db.

**Usage:**

```
[a_plot, shuffle_idx] = plotCovar(a_db, title_str, props)
```

**Parameters:**

**a\_db:** A tests\_db object that resulted from a function like cov.

**title\_str:** (Optional) String to append to plot title.

**props:** Optional properties.

**inverse:** If 1, take inverse of the data matrix.

**corrcoef:** If 1, normalize matrix elements to get corrcoef values.  
**logScale:** If 1, take logarithm of values before plotting.  
**localityIters:** Apply a locality optimization algorithm with this many iterations. (rest passed to plot\_image.)

**Returns:**

a\_plot: A plot\_abstract object or one of its subclasses. shuffle\_idx: (Optional) Ordering of columns found by locality optimization.

**Example:**

```
>> plotFigure(plotCovar(cov(get(constrainedMeasuresPreset(pbundle2, 6),  
'joined_control_db'))));
```

**See also:** [tests\\_db/cov](#) (p. 265), [plotImage](#) (p. ??), [tests\\_db/matchingRow](#) (p. 280), [corrcoefs](#). (p. ??)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2007/05/30

---

### A.52.59 Method tests\_db/plotImage

**Summary:** Create an image plot of a measure changing with the given two parameters.

**Usage:**

```
a_p = plotImage(a_db, par1, par2, col, title_str, short_title, props)
```

**Parameters:**

a\_db: A tests\_db object.  
par1, par2: X & Y variables.  
col: Plot this column.  
title\_str: (Optional) A string to be concatenated to the title.  
short\_title: (Optional) Few words that may appear in legends of multiplot.  
props: A structure with any optional properties.  
logScale: If 1, take logarithm of values before plotting.  
quiet: If 1, don't include database name on title.

**Returns:**

a\_p: A plot\_abstract.

**See also:** [plotScatter](#) (p. ??), [plotScatter3D](#) (p. ??)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2009/02/17

---

**A.52.60 Method** tests\_db/plotParamsCoverage

**Summary:** Lower triangle matrix of parameter-parameter combination scatter plots.

**Usage:**

```
a_pm = plotParamsCoverage(a_db, params, title_str, props)
```

**Parameters:**

**a\_db:** A tests\_db or params\_tests\_db object.  
**params:** Columns to be used in the parameter coverage.  
**title\_str:** (Optional) A string to be concatenated to the title.  
**props:** A structure with any optional properties, passed to plot\_abstract.  
    **colorTest:** Use this column to specify colors of points (see plotScatter for other props to control behavior).  
    **quiet:** Don't put the DB id on the title.  
            (rest passed to plotScatter)

**Returns:**

a\_pm: Resulting plot\_stack object.

**See also:** [plotScatter](#) (p. ??)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2016/05/27

---

**A.52.61 Method** tests\_db/plotrow

**Summary:** Creates a plot\_abstract describing the desired db row.

**Usage:**

```
a_plot = plotrow(a_tests_db, row, title_str, props)
```

**Parameters:**

**a\_tests\_db:** A tests\_db object.  
**row:** Row number to visualize.  
**title\_str:** Optional title string.  
**props:** A structure with any optional properties.  
    **putLabels:** Put special column name labels.

**Returns:**

a\_plot: A plot\_abstract object that can be plotted.

**See also:** [plot\\_abstract](#) (p. 180), [plotFigure](#) (p. ??)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2004/11/08

---

### A.52.62 Method `tests_db/plotrows`

**Summary:** Creates a `plot_stack` describing the db rows.

**Usage:**

```
a_plot = plotrows(a_tests_db, axis_limits, orientation, props)
```

**Parameters:**

`a_tests_db`: A `tests_db` object.

`axis_limits`: If given, all plots contained will have these axis limits.

`orientation`: Stack orientation 'x' for horizontal, 'y' for vertical, etc.

`title_str`: Optional title string.

`props`: A structure with any optional properties passed to `plot_stack`.

**Returns:**

`a_plot`: A `plot_stack` object that can be plotted.

**See also:** [plot\\_abstract](#) (p. 180), [plotFigure](#) (p. ??)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/11/09

---

### A.52.63 Method `tests_db/plotScatter`

**Summary:** Create a scatter plot of the given two tests.

**Usage:**

```
[a_p, b] = plotScatter(a_db, test1, test2, title_str, short_title, props)
```

**Description:** Newer versions of Matlab (e.g. R2014b) won't allow line styles in a scatter plot. To draw lines between points, one can switch to the default 'plot' function using the 'command' prop (see above) - but at the expense of losing the ability to use different colors for each point.

**Parameters:**

`a_db`: A `tests_db` object.

`test1, test2`: X & Y variables.

`title_str`: (Optional) A string to be concatenated to the title.

`short_title`: (Optional) Few words that may appear in legends of multiplot.

`props`: A structure with any optional properties.

`LineStyle`: Plot line style to use. (default: 'x')

`Regress`: If exists, use these as props for plotting linear

regression and displays statistics:  $R^2$ , F, p, and the error variance.

colorTest: Use this column as index into colormap.

colormap: Colormap vector, function name or handle to colormap (e.g., 'jet').

minValue, maxValue: Set boundaries for the displayed colors (see plotColormap). Values outside of the boundaries will be truncated.

command: Plot command to use (default: 'scatter'). If 'plot' is selected, colormap cannot be used.

numColors: Number of colors desired in colormap (default: 50).

quiet: If 1, don't include database name on title.

markerArea: Passed as the 'area' argument to scatter (default=36). (Others passed to plotColormap and plot\_abstract).

**Returns:**

a\_p: A plot\_abstract. b: A double holding the regression coefficient (optional)

**See also:** [plotScatter3D](#) (p. ??), [plotImage](#) (p. ??)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2005/09/29

---

#### A.52.64 Method tests\_db/plotScatter3D

**Summary:** Create a 3D scatter plot of the given three tests.

**Usage:**

```
a_p = plotScatter3D(a_db, test1, test2, test3, title_str, short_title, props)
```

**Parameters:**

a\_db: A params\_tests\_db object.

test1, test2, test3: X, Y, & Z variables.

title\_str: (Optional) A string to be concatenated to the title.

short\_title: (Optional) Few words that may appear in legends of multiplot.

props: A structure with any optional properties.

LineStyle: Plot line style to use. (default: 'x')

Regress: Calculate and plot a linear regression.

quiet: If 1, don't include database name on title.

**Returns:**

a\_p: A plot\_abstract.

**See also:**

**Author:** Cengiz Gunay jcgunay@emory.edu, 2007/11/30

---

**A.52.65 Method** tests\_db/plotTestsHistsMatrix

**Summary:** Create a matrix plot of test histograms.

**Usage:**

```
a_pm = plotTestsHistsMatrix(a_db, title_str, props)
```

**Description:** Skips the 'ItemIndex' test. If no axisLimits is given in stackProps, y-ranges are the maximal found from db.

**Parameters:**

**a\_db:** One or more params\_tests\_db object. Multiple databases in an array will produce vertical stacks.  
**title\_str:** (Optional) A string to be concatenated to the title.  
**props:** A structure with any optional properties, passed to plot\_abstract.  
**orient:** Orientation of the plot\_stack. 'x', 'y', or 'matrix' (default).  
**histBins:** Number of histogram bins.  
**quiet:** Don't put the DB id on the title.  
**plotProps:** Props passed to individual plots.  
**stackProps:** Passed to vertical plot stacks.

**Returns:**

a\_pm: A plot\_stack with the plots organized in matrix form.

**See also:** [params\\_tests\\_profile](#) (p. 162), [plotVar](#) (p. ??)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2004/10/17

---

**A.52.66 Method** tests\_db/plotUITable

**Summary:** Display rows in figure table element.

**Usage:**

```
a_p = plotUITable(a_db, title_str, props)
```

**Parameters:**

**a\_db:** A params\_tests\_db object.  
**title\_str:** (Optional) A string to be concatenated to the title.  
**props:** A structure with any optional properties

**Returns:**

a\_p: A plot\_abstract.

**Example:**

```
>> plotFigure(plotUITable(my_db(1:5, :), 'my DB'))
```

**See also:** [displayRows](#) (p. ??)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2014/10/22

---

**A.52.67 Method** tests\_db/plotUniquesStats2D

**Summary:** 2D image plot of the change in column mean for unique values of two other columns.

**Usage:**

```
an_image_plot = plotUniquesStats2D(a_db, unique_test1, unique_test2, stat_test, title_str, props)
```

**Parameters:**

**a\_db:** A tests\_db.

**unique\_test1, unique\_test2:** Columns whose unique values make up the X & Y of the 2D image plot.

**stat\_test:** Column for which statsMeanSTD will be calculated for each unique value.

**props:** A structure with any optional properties.

**popMean:** If specified, plot a dotted line specifying the population mean. If NaN, calculate from given a\_db.

**popDev:** Use this value +/- to choose colorbar extents (default=.3 or 2\*STD if popMean=NaN).

**colorbar:** Show vertical colorbar axis (see plotImage).

**uniqueVals1, uniqueVals2:** Use these unique values for unique\_test1, unique\_test2.

**statsFunc:** tests\_db/stats\* method to use (default: statsMeanStd).

**statsRow:** The row to pick from statsFunc results (default: mean). (rest passed to plotImage and plot\_abstract).

**Returns:**

**an\_image\_plot:** A plot\_abstract object to be plotted.

**Example:**

```
>> plotFigure(plotUniquesStats2D(triplet_param_success_db, ...
'F_tau_m', 'S_tau_m', 'successDefault', ...
'accross triplets',
struct('fixedSize', [4 3], 'popMean', NaN, ...
'colorbar', 1, 'quiet', 1, 'border', [0.03 0 0.03 0])))
```

**See also:** [tests\\_db](#) (p. 255), [sortedUniqueValues](#) (p. ??), [statsMeanStd](#) (p. ??), [plot\\_abstract](#) (p. 180), [plotImage](#) (p. ??)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2008/04/14

---

#### A.52.68 Method `tests_db/plotUniquesStatsBars`

**Summary:** Creates a mean-STD bar plot of a column for unique values of another column.

**Usage:**

```
a_bar_plot = plotUniquesStatsBars(a_db, unique_test, stat_test, title_str, props)
```

**Parameters:**

`a_db`: A `tests_db`.

`unique_test`: Column for which to generate bars for each of its unique values.

`stat_test`: Column for which `statsMeanSTD` will be calculated for each bar.

`props`: A structure with any optional properties.

`popMean`: If specified, plot a dotted line specifying the population mean. If NaN, calculated from `a_db`.

`yLims`: two-element vector for specifying y axis limits showing interesting part of the bar plot.

`uniqueVals`: Use these unique values for `unique_test`. (rest passed to `plot_bars` [and `plot_superpose` if `popMean`]).

**Returns:**

`a_bar_plot`: A `plot_abstract` object to be plotted.

**Example:**

```
>> plotFigure(plotUniquesStatsBars(triplet_param_success_db, 'F_tau_m', ...  
'successDefault', 'across triplets', ...  
struct('fixedSize', [4 2], 'yLims', [.7 .9], ...  
'popMean', 0.82, 'quiet', 1)))
```

**See also:** [tests\\_db](#) (p. 255), [sortedUniqueValues](#) (p. ??), [statsMeanStd](#) (p. ??), [plot\\_bars](#) (p. 187)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2008/04/14

---

**A.52.69 Method** tests\_db/plotUniquesStatsStacked3D

**Summary:** Stack of 2D image plots of a column mean at unique values of three other columns.

**Usage:**

```
a_stacked_plot = plotUniquesStatsStacked3D(a_db, unique_test1, unique_test2, unique_test3,
stat_test, title_str, props)
```

**Parameters:**

a\_db: A tests\_db.

unique\_test1, unique\_test2: Columns whose unique values make up the  
X  
& Y of the 2D image plot.

unique\_test3: Column whose unique values make up stacked dimension.

stat\_test: Column for which statsMeanSTD will be calculated for each  
unique value.

props: A structure with any optional properties.  
(rest passed to plotUniquesStats2D and plot\_stack).

**Returns:**

a\_stacked\_plot: A plot\_abstract object to be plotted.

**See also:** tests\_db (p. 255), sortedUniqueValues (p. ??), statsMeanStd (p. ??),  
plot\_abstract (p. 180), plotImage (p. ??)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2008/04/15

---

**A.52.70 Method** tests\_db/plotXRows

**Summary:** Create a scatter plot with a test versus the row numbers on the X-axis.

**Usage:**

```
a_p = plotXRows(a_db, test_y, title_str, short_title, props)
```

**Parameters:**

a\_db: A params\_tests\_db object.

test\_y: Y variable.

title\_str: (Optional) A string to be concatenanted to the title.

short\_title: (Optional) Few words that may appear in legends of multiplot.

props: A structure with any optional properties passed to plotScatter.

RowName: Label to show on X-axis, becomes a db column (default='RowNumber')

**Vertical:** If provided, put the rows on the Y-axis instead.

**Returns:**

a\_p: A plot\_abstract.

**See also:**

**Author:** Cengiz Gunay {cgunay@emory.edu}, 2007/01/16

---

**A.52.71 Method tests\_db/plotYTests**

**Summary:** Create a plot given database measures against given X-axis values, for each row.

**Usage:**

```
a_p = plotYTests(a_db, x_vals, tests, axis_labels, title_str, short_title, command, props)
```

**Parameters:**

a\_db: A params\_tests\_db object.

x\_vals: A vector of X-axis values.

tests: A vector or cell array of columns to correspond to each value from x\_vals.

axis\_labels: Cell array of X & Y axis labels.

title\_str: (Optional) A string to be concatenated to the title.

short\_title: (Optional) Few words that may appear in legends of multiplot.

command: (Optional) Command to do the plotting with (default: 'plot')

props: A structure with any optional properties.

LineStyle: Plot line style to use. (default: 'd-')

ShowErrorbars: If 1, errorbars are added to each point.

StatsDB: If given, use this stats\_db for the errorbar (default=statsMeanStd(a\_db)).

jitterX: Randomly jitter x-axis locations by this magnitude.

quiet: If 1, don't include database name on title.

**Returns:**

a\_p: A plot\_abstract.

**Example:**

```
>> a_p = plotYTests(a_db_row, [0 40 100 200], ...  
'IniSpontSpikeRateISI_0pA', 'PulseIni100msSpikeRateISI_D40pA', ...  
'PulseIni100msSpikeRateISI_D100pA', 'PulseIni100msSpikeRateISI_D200pA', ...  
'current pulse [pA]', 'firing rate [Hz]', '', f-I curves', 'neuron 1');  
>> plotFigure(a_p);
```

**See also:** [plotFigure](#) (p. ??)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2006/01/23

---

#### A.52.72 Method `tests_db/plot_abstract`

**Summary:** Default visualization for a database.

**Usage:**

```
a_pm = plot_abstract(a_db, title_str)
```

**Description:** Calls `plotTestsHistsMatrix`. Subclasses should override this method to provide their own visualization.

**Parameters:**

`a_db`: A `params_tests_db` object.

`title_str`: (Optional) A string to be concatenated to the title.

`props`: A structure with any optional properties.

**Returns:**

`a_pm`: A `plot_stack` with the plots organized in matrix form

**Example:**

```
>> plot(my_db, ': first impression')  
will call this function and send the generated plot to the plotFigure function.
```

**See also:** [plot\\_abstract/plot\\_abstract](#) (p. 180), [plotTestsHistsMatrix](#) (p. ??), [plotFigure](#) (p. ??)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2005/08/17

---

#### A.52.73 Method `tests_db/plotBars`

**Summary:** Creates a bar graph comparing all DB rows in groups, with a separate axis for each column.

**Usage:**

```
a_plot = plotBars(a_tests_db, title_str, props)
```

**Parameters:**

`a_tests_db`: A `tests_db` object.

`title_str`: (Optional) The plot title.

`props`: A structure with any optional properties.

**Returns:**

a\_plot: A object of plot\_bars or one of its subclasses.

**See also:** [plot\\_abstract](#) (p. 180), [plot\\_simple](#) (p. 193)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2006/03/13

---

**A.52.74 Method tests\_db/plus**

**Summary:** Adds a DB to another or to a scalar.

**Usage:**

```
a_db = plus(left_obj, right_obj)
```

**Description:** If DBs have mismatching columns only the common columns will be kept. In any case, the resulting DB columns will be sorted in the order of the left-hand-side DB.

**Parameters:**

left\_obj, right\_obj: Operands of the addition. One must be of type tests\_db and the other can be a scalar or tests\_db.

**Returns:**

a\_db: The resulting tests\_db.

**See also:** [plus](#) (p. ??)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2007/12/13

---

**A.52.75 Method tests\_db/princomp**

**Summary:** Generates a database of the principal components of given DB.

**Usage:**

```
a_pca_db = princomp(db, props)
```

**Parameters:**

db: A tests\_db object.

props: A structure with any optional properties.

normalized: If specified zscore is used before princomp.

**Returns:**

a\_pca\_db: A tests\_db where each row is a principal component.

**See also:** [princomp](#) (p. ??), [zscore](#) (p. ??)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2005/09/21

---

### A.52.76 Method `tests_db/processDimNonNaNInf`

**Summary:** Recursively process the specified dimension with the desired function after removing NaNs and Infs.

**Usage:**

```
[a_db, n, i] = processDimNonNaNInf(a_db, dim, a_func, a_func_name)
```

**Description:** Does a recursive operation over other dimensions in order to remove NaN and Inf values. This takes more time than applying the function directly.

**Parameters:**

`a_db`: A `tests_db` object.

`dim`: Work down dimension (see `mean`).

`a_func`: A function name or handle to be passed to `feval` that takes the data as the first argument and dimension to work as second.

`a_func_name`: (Optional) A name to add to the id of `a_db`.

**Returns:**

`a_db`: The DB with one row of max values, with selected dimension replaced by the output of the given function. `n`: (Optional) Numbers of used values in each call of `a_func`. `i`: (Optional) Indices returned by `a_func`.

**Example:**

```
a_db = tests_3D_db(rand(5, 5, 5));
>> b_db = processDimNonNaNInf(a_db, 1, 'mean')
will find the mean of rows in each page of the random 3D matrix.
>> b_db = processDimNonNaNInf(a_db, 1, @(x,y)(max(x, [], y)), 'max')
more complex function form with 'max'.
```

**See also:** `max` (p. ??), `mean` (p. ??), `feval` (p. ??), `tests_db` (p. 255)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2008/05/27

---

### A.52.77 Method `tests_db/rankMatching`

**Summary:** Create a ranking db of row distances of db to given criterion db.

**Usage:**

```
a_ranked_db = rankMatching(db, crit_db, props)
```

**Description:** The `crit_db` parameter can be created with the `matchingRow` method. `TestWeights` modify the importance of each measure. Rows containing NaNs can be removed using `noNaNRows` before calling `rankMatching`. Warning: existing `RowIndex` column in `db` will be replaced with the ranking `RowIndex` used for `joinOriginal`.

**Parameters:**

**db:** A tests\_db to rank.

**crit\_db:** A tests\_db object holding the match criterion tests and stds.

**props:** A structure with any optional properties.

**limitSTD:** Truncate error values at this many STDs.

**tolerateNaNs:** Multiplied by 3xSTD to replace NaN values. 0 means to skip NaNs in the distance calculation, scaling sum of errors by number of non-NaN entries. Negative values accepted; -1 means -3xSTDs error (default=+1).

**testWeights:** Structure array associating tests and multiplicative weights.

**restoreWeights:** Reverse the testWeights application after calculating distances.

**topRows:** If given, only return this many of the top rows.

**useMahal:** Use the Mahalanobis distance from the covariance matrix in crit\_db.

**Returns:**

**a\_ranked\_db:** A ranked\_db object.

**Example:**

```
Select a target row from measured distribution (e.g., experimental data):
>> a_crit_db = matchingRow(exp_db, 12);
Rank another database by comparing to selected row:
>> a_ranked_db = rankMatching(orig_db, a_crit_db);
Look at top ranked rows:
>> displayRows(a_ranked_db(1:5, :))
```

**See also:** [matchingRow](#) (p. ??), [joinOriginal](#) (p. ??), [tests\\_db](#) (p. 255), [noNaNRows](#) (p. ??)

**Author:** Cengiz Gunay [cgunay@emory.edu](mailto:cgunay@emory.edu), 2004/12/08

---

### A.52.78 Method tests\_db/rdivide

**Summary:** Adds a DB to another or to a scalar.

**Usage:**

```
a_db = rdivide(left_obj, right_obj)
```

**Description:** If DBs have mismatching columns only the common columns will be kept. In any case, the resulting DB columns will be sorted in the order of the left-hand-side DB.

**Parameters:**

`left_obj`, `right_obj`: Operands of the addition. One must be of type `tests_db` and the other can be a scalar or `tests_db`.

**Returns:**

`a_db`: The resulting `tests_db`.

**See also:** `rdivide` (p. ??)

**Author:** Cengiz Gunay `jcgunay@emory.edu`, 2007/12/13

---

### A.52.79 Method `tests_db/renameColumns`

**Summary:** Rename one or more existing columns.

**Usage:**

```
a_db = renameColumns(a_db, old_names, new_names)
```

**Description:** This is a cheap operation than modifies meta-data kept in object. For the regular expression renaming, the `old_names` and `new_names` parameters are passed to the `regexprep` command after removing the delimiting slashes (`//`). At least one grouping construct (`()`) must be used in the search pattern such that it can be used in the replacement pattern (e.g., `'1'`). *See example above. This function uses the generic `renameIdx` that can*

**Parameters:** `a_db`: A `tests_db` object.

`old_names`: A cell array of existing names, array of numerical indices, or a regular expression denoted between slashes (e.g., `'/(.*)/'`).

`new_names`: New names to replace existing ones OR regular expression replace string (no slashes, e.g., `'1_test'`). *See `regexprep` command.*

`a_db`: The `tests_db` object that includes the new columns.

```
>> new_db = renameColumns(a_db, 'PulseIni100msSpikeRateISI_D40pA', 'Firing_rate');
>> new_db = renameColumns(a_db, 1, 'Firing_rate');
>> new_db = renameColumns(a_db, '/(.*)/', '1_old');
>> new_db = renameColumns(a_db, 'a', 'b', 'c', 'd');
renameIdx (p. ??), regexprep (p. ??), allocateRows (p. ??), tests_db (p. 255)
Cengiz Gunay jcgunay@emory.edu, 2017/06/09
```

---

### A.52.80 Method `tests_db/renameRows`

**Summary:** Rename one or more existing rows.

**Usage:**

```
a_db = renameRows(a_db, old_names, new_names)
```

**Description:** This is a cheap operation than modifies meta-data kept in object. For the regular expression renaming, the `old_names` and `new_names` parameters are passed to the `regexprep` command after removing the delimiting slashes (`//`). At least one grouping construct (`()`) must be used in the search pattern such that it can be used in the replacement pattern (e.g., `'1'`). *See example above. This function uses the generic `renameIdx` that can*

`a_db`: A `tests_db` object.

`old_names`: A cell array of existing names, array of numerical indices, or a regular expression denoted between slashes (e.g., `'/(.*)/'`).

`new_names`: New names to replace existing ones OR regular expression replace string (no slashes, e.g., `'1_test'`). *See `regexprep` command.*

`a_db`: The `tests_db` object that includes the new rows.

```
>> new_db = renameRows(a_db, 'PulseIni100msSpikeRateISI_D40pA', 'Firing_rate');  
>> new_db = renameRows(a_db, 1, 'Firing_rate');  
>> new_db = renameRows(a_db, '/(.*)/', '1_old');  
>> new_db = renameRows(a_db, 'a', 'b', 'c', 'd');

### A.52.81 Method `tests_db/rop`

**Summary:** Prepares aligned columns in two DBs or one DB and a scalar for an array arithmetic operation.

**Usage:**

```
a_db = rop(left_obj, right_obj, op_func, op_id)
```

**Description:** If DBs have mismatching columns only the common columns will be kept. In any case, the resulting DB columns will be sorted in the order of the left-hand-side DB. Array addition (plus), subtraction (minus), multiplication (mtimes) and division (rdivide) use this function to align columns.

**Parameters:**

**left\_obj, right\_obj:** Operands of the operation. One must be of type `tests_db` and the other can be a scalar or `tests_db`.

**op\_func:** Operation function (e.g., `@plus`).

**op\_id:** A string to represent the operation that will show up in the returned id.

**Returns:**

**a\_db:** The resulting `tests_db`.

**See also:** [tests\\_db/plus](#) (p. 298), [tests\\_db/minus](#) (p. 282), [tests\\_db/mtimes](#) (p. 283), [tests\\_db/rdivide](#) (p. 300)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2007/12/13

---

### A.52.82 Method `tests_db/rows2Struct`

**Summary:** Convert given rows of database to a structure array.

**Usage:**

```
s = rows2Struct(db, rows, pages)
```

**Parameters:**

**db:** A `tests_db` object.

**rows:** Indices of rows in `db`.

**pages:** Pages of `db`.

**Returns:**

**s:** A structure of column name and value pairs.

**See also:** [tests\\_db](#) (p. 255)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2005/08/17

---

### A.52.83 Method `tests_db/set`

**Summary:** Generic method for setting object attributes.

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/10/08

---

**A.52.84 Method** `tests_db/setProp`

**Summary:** Generic method for setting optional object properties.

**Usage:**

```
obj = setProp(obj, prop1, val1, prop2, val2, ...)
```

**Description:** Modifies or adds property values. As many property name-value pairs can be specified.

**Parameters:**

`obj`: Any object that has a `props` field.

`attr`: Property name

`val`: Property value.

**Returns:**

`obj`: The new object with the updated properties.

**See also:**

**Author:** Cengiz Gunay [cgunay@emory.edu](mailto:cgunay@emory.edu), 2004/11/22

---

**A.52.85 Method** `tests_db/setRows`

**Summary:** Sets the rows of observations in `tests_db`.

**Usage:**

```
index = setRows(obj, rows)
```

**Description:** Sets a new set of observations to the database and returns the new DB.

**Parameters:**

`obj`: A `tests_db` object.

`rows`: A matrix that contains rows for the DB.

**Returns:**

`obj`: The `tests_db` object with the new rows.

**See also:** [allocateRows](#) (p. ??), [addRow](#) (p. ??), [tests\\_db](#) (p. 255)

**Author:** Cengiz Gunay [cgunay@emory.edu](mailto:cgunay@emory.edu), 2004/09/08

---

**A.52.86 Method** tests\_db/shufflecols

**Summary:** Returns a db with shuffled columns of given rows.

**Usage:**

```
s = shufflecols(db, rows, grouped)
```

**Description:** Can be used for shuffle prediction. Basically, shuffle columns of tests and rerun high order analyses.

**Parameters:**

**db:** A tests\_db object.

**rows:** Rows to shuffle.

**grouped:** If 1 then apply same shuffling to all rows,  
if 0 shuffle each row independently (default=0).

**Returns:**

a\_db: The shuffled db.

**See also:** tests\_db (p. 255)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2015/11/19

---

**A.52.87 Method** tests\_db/shufflerows

**Summary:** Returns a db with shuffled rows of given columns.

**Usage:**

```
s = shufflerows(db, tests, grouped)
```

**Description:** Can be used for shuffle prediction. Basically, shuffle rows of tests and rerun high order analyses.

**Parameters:**

**db:** A tests\_db object.

**tests:** Columns to shuffle.

**grouped:** If 1 then shuffle tests all together,  
if 0 shuffle each test separately (default=0).

**Returns:**

a\_db: The shuffled db.

**See also:** tests\_db (p. 255)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2004/11/10

---

**A.52.88 Method** tests\_db/sortrows

**Summary:** Returns a sorted\_db according to given columns.

**Usage:**

```
[sorted_db, idx] = sortrows(db, cols, props)
```

**Description:** WARNING: For multi-page dbs, sorts only the first page and applies the ordering to all other pages which may produce wrong results for some applications.

**Parameters:**

**db:** A tests\_db object.

**cols:** Columns to use for sorting.

**props:** Structure of optional parameters.

**reverse:** If exists, sort in reverse order.

**Returns:**

**sorted\_db:** The sorted tests\_db. **idx:** The row index permutation vector, such that sorted\_db = db(idx, :).

**See also:** [sortrows](#) (p. ??), [tests\\_db](#) (p. 255)

**Author:** Cengiz Gunay ;cgunay@emory.edu, 2004/10/11

---

**A.52.89 Method** tests\_db/sqrt

**Summary:** Takes the square root of a\_db.

**Usage:**

```
a_db = sqrt(a_db)
```

**Description:** Overloaded sqrt function.

**Parameters:**

**a\_db:** A tests\_db.

**Returns:**

**a\_db:** The resulting tests\_db.

**See also:** [sqrt](#) (p. ??)

**Author:** Cengiz Gunay ;cgunay@emory.edu, 2007/12/13

---

**A.52.90 Method** tests\_db/statsAll

**Summary:** Makes a stats\_db with rows of mean, STD, SE, and CV of the tests' distributions in db.

**Usage:**

```
a_stats_db = statsAll(db, tests, props)
```

**Parameters:**

db: A tests\_db object.

tests: A selection of tests (see onlyRowsTests).

props: A structure with any optional properties for stats\_db.

**Returns:**

a\_stats\_db: A stats\_db object.

**See also:** [tests\\_db](#) (p. 255)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2005/08/24

---

**A.52.91 Method** tests\_db/statsBounds

**Summary:** Generates a stats\_db object with three rows corresponding to the mean, min, max and number of observations of the tests' distributions.

**Usage:**

```
a_stats_db = statsBounds(a_db, tests, props)
```

**Description:** A page is generated for each page of data in db.

**Parameters:**

a\_db: A tests\_db object.

tests: A selection of tests (see onlyRowsTests).

props: A structure with any optional properties for stats\_db.

**Returns:**

a\_stats\_db: A stats\_db object.

**See also:** [tests\\_db](#) (p. 255)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2004/10/07

---

**A.52.92 Method** tests\_db/statsMeanSE

**Summary:** Generates a stats\_db object with two rows corresponding to the mean and standard error (SE) of the tests' distributions.

**Usage:**

```
a_stats_db = statsMeanSE(db, tests, props)
```

**Parameters:**

db: A tests\_db object.

tests: A selection of tests (see onlyRowsTests).

props: A structure with any optional properties for stats\_db.

**Returns:**

a\_stats\_db: A stats\_db object.

**See also:** [tests\\_db](#) (p. 255)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2004/10/07

---

**A.52.93 Method** tests\_db/statsMeanStd

**Summary:** Generates a stats\_db object with mean, STD, and number of observations of the tests' distributions.

**Usage:**

```
a_stats_db = statsMeanStd(db, tests, props)
```

**Parameters:**

db: A tests\_db object.

tests: A selection of tests (see onlyRowsTests).

props: A structure with any optional properties for stats\_db.

**Returns:**

a\_stats\_db: A stats\_db object.

**See also:** [tests\\_db](#) (p. 255)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2004/10/07

---

**A.52.94 Method** tests\_db/std

**Summary:** Returns the std of the data matrix of a\_db. Ignores NaN values.

**Usage:**

```
[a_db, n] = std(a_db, sflag, dim)
```

**Description:** Does a recursive operation over dimensions in order to remove NaN values. This takes considerable amount of time compared with a straightforward std operation.

**Parameters:**

a\_db: A tests\_db object.

dim: Work down dimension.

**Returns:**

a\_db: The DB with std values. n: (Optional) Numbers of non-NaN rows included in calculating each column.

**See also:** [std](#) (p. ??), [tests\\_db](#) (p. 255)

**Author:** Cengiz Gunay {cgunay@emory.edu}, 2004/10/06

---

**A.52.95 Method** tests\_db/subsasgn

**Summary:** Defines generic index-based assignment for objects.

**Author:** Cengiz Gunay {cgunay@emory.edu}, 2006/02/06

---

**A.52.96 Method** tests\_db/subsref

**Summary:** Defines indexing for tests\_db objects for () and . operations.

**Usage:**

```
obj = obj(rows, tests) obj = obj.attribute
```

**Description:** Returns attributes or selects the given test columns and rows and returns in a new tests\_db object.

**Parameters:**

obj: A tests\_db object.

rows: A logical or index vector of rows. If ':', all rows.

tests: Cell array of test names or column indices. If ':', all tests.

attribute: A tests\_db class attribute.

**Returns:**

obj: The new tests\_db object.

**See also:** [subsref](#) (p. ??), [tests\\_db](#) (p. 255)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2004/09/17

---

**A.52.97 Method tests\_db/sum**

**Summary:** Creates a tests\_db by summing all rows.

**Usage:**

```
a_db = sum(a_db, dim, props)
```

**Description:** Applies the sum function to whole DB. The resulting DB will have one row.

**Parameters:**

a\_db: A tests\_db object.

props: Optional properties.

**Returns:**

a\_db: The resulting tests\_db.

**See also:** [sum](#) (p. ??)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2006/05/24

---

**A.52.98 Method tests\_db/swapColsPages**

**Summary:** Swaps the column dimension with the page dimension of the tests\_db.

**Usage:**

```
a_db = swapColsPages(db)
```

**Description:** Watered-down version of the tests\_3D\_db/swapColsPages function that does not touch column indices.

**Parameters:**

db: A tests\_db object.

**Returns:**

a\_db: A tests\_db object.

**See also:** [tests\\_db](#) (p. 255)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2017/06/09

---

**A.52.99 Method** tests\_db/swapRowsPages

**Summary:** Swaps the row dimension with the page dimension of the tests\_db.

**Usage:**

```
a_db = swapRowsPages(db)
```

**Description:** Watered-down version of the tests\_3D\_db/swapRowsPages function that does not touch row indices.

**Parameters:**

db: A tests\_db object.

**Returns:**

a\_db: A tests\_db object.

**See also:** tests\_db (p. 255)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2004/10/04

---

**A.52.100 Method** tests\_db/tests2cols

**Summary:** Find column numbers from a test names/numbers specification.

**Usage:**

```
cols = tests2cols(db, tests)
```

**Description:** Uses tests2idx.

**Parameters:**

db: A tests\_db object.

tests: Either a single or array of column numbers, or a single test name or a cell array of test names. If ':', all tests. For name strings, regular expressions are supported if quoted with slashes (e.g., '/a.\*'). See tests2idx for more.

**Returns:**

cols: Array of column indices.

**See also:** tests\_db (p. 255), tests2idx (p. ??)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2004/10/07

---

### A.52.101 Method `tests_db/tests2idx`

**Summary:** Find dimension indices from a test names/numbers specification.

**Usage:**

```
idx = tests2idx(db, dim_num, tests)
```

**Parameters:**

**db:** A `tests_db` object.

**dim\_num:** Number between 1-3 to choose dimension: row, column, or page.

**tests:** Either a single or array of column numbers, or a single test name or a cell array of test names. If `':'`, all tests. For name strings, regular expressions are supported if quoted with slashes (e.g., `'/a.*/'`)

**Returns:**

**idx:** Array of column indices.

**Example:**

```
>> cols = tests2idx(a_db, 2, 'col1', '/col2+/');  
will return indices of col1 and columns like col2, col22, col22, etc.
```

**See also:** [tests\\_db](#) (p. 255), [tests2cols](#) (p. ??), [regexp](#) (p. ??)

**Author:** Cengiz Gunay [cgunay@emory.edu](mailto:cgunay@emory.edu), 2004/10/07

---

### A.52.102 Method `tests_db/tests2log`

**Summary:** Return logical array of indices from a test names/numbers specification.

**Usage:**

```
a_log = tests2log(db, dim_name, tests)
```

**Description:** See `tests2idx`.

**Parameters:**

**db:** A `tests_db` object.

**dim\_num:** Number between 1-3 to choose dimension: row, column, or page.

**tests:** Either a single or array of column numbers, or a single test name or a cell array of test names. If `':'`, all tests. For name strings, regular expressions are supported if quoted with slashes (e.g., `'/a.*/'`)

**Returns:**

**a\_log:** Array of column indices.

**Example:**

```
>> cols = tests2log(a_db, 'col', 'col1', '/col2+/');  
>> stripped_db = a_db(:, cols)  
will remove columns col1 and col2, col22, col22, etc. from stripped_db.
```

**See also:** [tests\\_db](#) (p. 255), [tests2cols](#) (p. ??), [regexp](#) (p. ??)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2008/05/27

---

**A.52.103 Method tests\_db/testsHists**

**Summary:** Calculates histograms for all tests.

**Usage:**

```
t_hists = testsHists(a_db, num_bins)
```

**Parameters:**

**a\_db:** A tests\_db object.

**num\_bins:** Number of histogram bins (Optional, default=100), or  
vector of histogram bin centers.

**Returns:**

**t\_hists:** An array of histograms for each test in a\_db.

**See also:** [params\\_tests\\_profile](#) (p. 162)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2005/04/27

---

**A.52.104 Method tests\_db/times**

**Usage:**

```
a_db = mtimes(left_obj, right_obj)
```

**Parameters:**

**left\_obj, right\_obj:** Operands of the multiplication. One or more must be  
of type tests\_db.

**Returns:**

**a\_db:** The resulting tests\_db.

**See also:** [tests\\_db/times](#) (p. 313), [mtimes](#) (p. ??)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2006/05/24

---

**A.52.105 Method** tests\_db/transpose

**Summary:** Transposes data matrix and swaps row and columns metadata as well.

**Usage:**

```
a_db = transpose(a_db)
```

**Parameters:**

a\_db: A tests\_db.

**Returns:**

a\_db: The transposed tests\_db.

**See also:** [transpose](#) (p. ??)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2007/02/07

---

**A.52.106 Method** tests\_db/uminus

**Summary:** Unary minus or negation.

**Usage:**

```
a_db = uminus(left_obj)
```

**Parameters:**

left\_obj: A tests\_db object.

**Returns:**

a\_db: The resulting tests\_db.

**See also:** [uminus](#) (p. ??), [uop](#) (p. ??)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2008/01/16

---

**A.52.107 Method** tests\_db/unique

**Summary:** Returns DB with unique rows.

**Usage:**

```
[a_db idx] = unique(a_db)
```

**Description:** Keeps the original DB order. Uses the uniqueValues function.

**Parameters:**

a\_db: tests\_db from which to find uniques.

**Returns:**

a\_db: The resulting tests\_db. idx: Indices of the unique rows in the original data matrix.

**See also:** [uniqueValues](#) (p. ??), [unique](#) (p. ??)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2007/11/19

---

**A.52.108 Method tests\_db/uop**

**Summary:** Unary operation.

**Usage:**

```
a_db = uop(left_obj, op_func, op_id)
```

**Description:** Applies the operation to the database contents and updates its id field. Unary minus (uminus) uses this function.

**Parameters:**

left\_obj: Operands of the operation.

op\_func: Operation function (e.g., @plus).

op\_id: A string to represent the operation that will show up in the returned id.

**Returns:**

a\_db: The resulting tests\_db.

**See also:** [tests\\_db/uminus](#) (p. 314), [uminus](#) (p. ??)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2008/01/16

---

**A.52.109 Method tests\_db/vertcat**

**Summary:** Vertical concatenation [db;with\_db;...] operator.

**Usage:**

```
a_db = vertcat(db, with_db, ...)
```

**Description:** Concatenates rows of with\_db to rows of db. Overrides the built-in vertcat function that is called when [db;with\_db] is executed. If the first argument is an array of DBs, then this functionality is not needed; built-in vertcat is called.

**Parameters:**

db: A tests\_db object.

**with\_db:** A tests\_db object whose rows are concatenated to db.

**Returns:**

**a\_db:** A tests\_db that contains rows of db and with\_db.

**See also:** [vertcat](#) (p. ??), [tests\\_db](#) (p. 255)

**Author:** Cengiz Gunay [cgunay@emory.edu](mailto:cgunay@emory.edu), 2005/01/25

---

## A.53 Class trace

### A.53.1 Constructor trace/trace

**Summary:** Load a generic data trace. It can be membrane voltage, current, etc.

**Usage:**

```
obj = trace(data_src, dt, dy, id, props)
```

**Description:** This object is designed to recognize most data file formats. See the data\_src parameter below. Traces for specific experimental or simulation protocols can extend this class for adding new parameters.

**Parameters:**

**data\_src:** Trace data as a column vector OR name of a data file generated by either

Genesis (.bin, .gbin, .genflac), Neuron, PCDX (.all), Matlab (.mat), NeuroShare (.nsn, .nev, .stb, .plx, .nex, .map, .son, .smr, .mcd), ASCII (.txt) or Axoclamp (.abf) files. As last resort, file will be loaded with Matlab's load() function.

**dt:** Time resolution in [s], unless specified in HDF5 or NeuroShare file. For Neuron ASCII files, it is used as the file data units.

**dy:** y-axis resolution in [ISI (V, A, etc.)], unless specified in HDF5 or NeuroShare file.

**id:** Identification string

**props:** A structure with any optional properties.

**scale\_y:** Y-axis scale to be applied to loaded data.

**offset\_y:** Y-axis offset to be added to loaded and scaled data.

**unit\_y:** Unit of Y-axis as in 'V' or 'A' (default='V').

**y\_label:** String to put on Y-axis of plots.

**trace\_time\_start:** Samples in the beginning to discard [dt]

**baseline:** Resting potential.

**channel:** Channel to read from file Genesis, PCDX, NeuroShare or Neuron file, or column in a data vector.

**numTraces:** Divide the single column vector of data into this many columns by making it a matrix.

**file\_type:** Specify file type instead of guessing from extension:  
 'genesis': Raw binary files created with Genesis disk\_out method.  
 'genesis\_flac': Compressed Genesis binary files. 'neuron': Binary files created with Neuron's Vector.vwrite method. 'neuronascii': Ascii files created from Neuron's Vector objects. Uses time step in file to scale given dt (Must be in ms). 'pcdx': .ALL data acquisition files from PCDX program. 'matlab': Matlab .MAT binary files with matrix data. 'neuroshare': One of the vendor formats recognized by NeuroShare Windows DLLs. See above and <http://neuroshare.org>. A scale\_y value may need to be supplied to get the correct units. 'abf': AxoClamp .ABF format read with abf2load from Matlab FileExchange. 'txt': Generic, space-separated ASCII file.

**file\_endian:** 'l' for little endian and 'b' for big endian (default='n', for native endian). See machineformat option in fopen for more info.

**traces:** Trace numbers as a numeric array or as a string with numeric ranges (e.g., '1 2 5-10 28') for PCDX files.

**spike\_finder:** Method of finding spikes  
 (1 uses findFilteredSpikes.m, 2 for Li Su's findspikes, 3 for Alfonso Delgado Reyes's findspikes\_old, and 4 for using Matlab's findpeaks method). Methods 2-4 require a threshold. For method 4, see additional findpeaks\* props below.

**threshold:** Spike finding threshold. For the findspikes method, it is either a scalar, or [thres1 thres2] to define a range. For findFilteredSpikes it is used on the filtered data and the default is 2/3 max amplitude of band-passed data, but with a minimum of 15. For findpeaks, it sets the MinPeakHeight parameter.

**downThreshold:** (Only for findFilteredSpikes) Size of the trough after the spike peak in filtered data (Default=-2).

**minInit2MaxAmp, minMin2MaxAmp:** For spike\_shape elimination, conditions of minimal allowed values for initial point to max point and minimal point to max point, respectively (Default=10 for both).

**init\_Vm\_method:** Method of finding spike thresholds during spike shape calculation (see spike\_shape/spike\_shape).

**init\_threshold:** Spike initiation threshold (deriv or accel). (see above methods and implementation in calcInitVm)

**init\_lo\_thr, init\_hi\_thr:** Low and high thresholds for slope.

**custom\_filter:** Recommended if sampling rate differs appreciably from 10 kHz.  
 If custom\_filter == 1, a filter with custom lowpass and highpass cutoffs can be specified. This allows for fast and accurate spike discrimination. The

filter type used is a 2-pole butterworth, different than the default high-order Cheby2. Creates new prop called 'butterWorth' to hold the filter.

**lowPassFreq:** If set, it sets a new low pass cutoff for custom filter. Default is 3000Hz

**highPassFreq:** If set it sets a new high pass cutoff for custom filter. Default is 50 Hz

**findpeaksArgs:** Cell array of arguments to pass to findpeaks.

**findpeaksSign:** Choose -1 to flip the sign of data and look for negative peaks (default=1).

**quiet:** If 1, reduces the amount of textual description in plots and does not add information to id field.

**Returns a structure object with the following fields:**

**data:** The trace column matrix. dt, dy, id, props (see above)

**See also:** [spikes](#) (p. 227), [spike\\_shape](#) (p. 215), [cip\\_trace](#) (p. 56), [period](#) (p. 162), [findpeaks](#) (p. ??), [findFilteredSpikes](#) (p. ??), [findspikes](#) (p. ??), [findspikes\\_old](#) (p. ??)

---

### A.53.2 Method `trace/analyzeSpikesInPeriod`

**Summary:** Returns results and a db of spikes by collecting test results of a trace, analyzing each individual spike.

**Usage:**

```
[results period_spikes a_spikes_db spikes_stats_db spikes_hists_dbs] =
analyzeSpikesInPeriod(a_trace, a_spikes, period, prefix_str)
```

**Parameters:**

**a\_trace:** A trace object.

**a\_spikes:** A spikes object from the a\_trace object.

**period:** A period of object of a\_trace object of interest.

**prefix\_str:** Prefix string to be added to spike shape results.

**Returns:**

**results:** Results structure names prefixed with prefix\_str. **period\_spikes:** Corrected spikes object for this period. **a\_spikes\_db:** A mini spikes database of results from each spike in period. **spikes\_stats\_db:** Statistics from the mini spikes database. **spikes\_hists\_dbs:** Cell array of histograms from the mini spikes database.

See also: [trace](#) (p. 316), [spikes](#) (p. 227), [period](#) (p. 162), [spike\\_shape](#) (p. 215), [getProfileAllSpikes](#) (p. ??)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2005/05/04

---

### A.53.3 Method `trace/avgTraces`

**Summary:** Average multiple traces.

**Usage:**

```
[avg_tr sd_tr] = avgTraces(traces, props)
```

**Parameters:**

- `traces`: A vector of trace objects.
- `props`: A structure with any optional properties.
  - `calcSE`: If given, calculate standard error instead of deviation.
  - `id`: String to replace the id property of averaged trace. The term "average" or "SD" will be prepended to it. By default it will be lengthy and show the arithmetic done.

**Returns:**

`avg_tr`: A trace object that holds the average. `sd_tr`: A trace object that holds the standard deviation or error.

See also: [trace](#) (p. 316)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2010/11/09

---

### A.53.4 Method `trace/binary_op`

**Summary:** Generic binary operator applications for trace objects.

**Usage:**

```
result_tr = binary_op(left_tr, right_tr, op_func, op_id, props)
```

**Parameters:**

- `left_tr, right_tr`: trace objects.
- `op_func`: Operation function (e.g., @plus).
- `op_id`: A string to represent the operation that will show up in the returned id.
- `props`: A structure with any optional properties.

**Returns:**

result\_tr: Resulting trace object.

**Example:**

```
>> result_tr = binary_op(vc1, vc2, @minus, '-')
```

**See also:** [trace](#) (p. 316), [plus](#) (p. ??), [minus](#) (p. ??)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2010/05/21

---

### A.53.5 Method `trace/calcAvg`

**Summary:** Calculates the average value of the given period of the trace, t.

**Usage:**

```
avg_val = calcAvg(t, period)
```

**Parameters:**

t: A trace object.

period: A period object (optional).

**See also:** [period](#) (p. 162), [trace](#) (p. 316)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/07/30

---

### A.53.6 Method `trace/calcMax`

**Summary:** Calculates the maximal value of the given period of the trace, t.

**Usage:**

```
[max_val, max_idx] = calcMax(t, period)
```

**Parameters:**

t: A trace object.

period: A period object (optional).

**Returns:**

max\_val: The max value. max\_idx: Its index in the trace.

**See also:** [period](#) (p. 162), [trace](#) (p. 316)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/07/30

---

#### A.53.7 Method `trace/calcMin`

**Summary:** Calculates the minimal value of the given period of the trace, `t`.

**Usage:**

```
[min_val, min_idx] = calcMin(t, a_period)
```

**Parameters:**

`t`: A trace object.

`a_period`: A period object (optional).

**Returns:**

`min_val`: The min value. `min_idx`: Its index in the trace.

**See also:** `period` (p. 162), `trace` (p. 316)

**Author:** Cengiz Gunay `jcgunay@emory.edu`, 2004/07/30

---

#### A.53.8 Method `trace/display`

**Author:** Cengiz Gunay `jcgunay@emory.edu`, 2004/08/04

---

#### A.53.9 Method `trace/findFilteredSpikes`

**Summary:** Runs a frequency filter over the data and then finds all peaks using `findspikes`.

**Usage:**

```
[times, peaks, n] = findFilteredSpikes(t, a_period, plotit, minamp)
```

**Description:** Runs a 50-300 Hz band-pass filter over the data and then calls `findspikes`.

The filter both removes low-frequency offset changes, such as `cip` period effects, and high-frequency noise that is detected as local peaks by `findspikes`. The spikes found are post-processed to make sure the rise and fall times are consistent. Note: The filter employed only works with data sampled at 10kHz.

**Parameters:**

`t`: Trace object

`a_period`: Period of interest.

`plotit`: Plots the spikes found if 1.

`minamp` (optional): minimum amplitude above baseline that must be reached.

`-i` adjust as necessary to discriminate spikes from EPSPs.

`props`: A structure with any optional properties, such as:

**downThreshold:** Size of trough after spike (default=-2)

**Returns:**

times: The times of spikes [dt]. peaks: The peaks corresponding to the times of spikes. n: The number of spikes.

**See also:** [findspikes](#) (p. ??), [period](#) (p. 162)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/03/08

---

**A.53.10 Method** `trace/get`

**Summary:** Defines generic attribute retrieval for objects.

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/09/14

---

**A.53.11 Method** `trace/getDy`

**Summary:** Returns dy.

**Usage:**

```
dy = getDy(t)
```

**Parameters:**

t: A trace object.

**Returns:**

dy: The dy value.

**See also:** [trace](#) (p. 316)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/08/31

---

**A.53.12 Method** `trace/getPotResults`

**Usage:**

```
results = getPotResults(t)
```

**Parameters:**

t: A trace object.

**Returns:**

results: A structure associating potential info names to values in mV as follows:  
min - minimum potential for the whole trace. avg - average potential for the whole trace. max - maximum potential for the whole trace.

**See also:** [spike\\_shape](#) (p. 215)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2004/09/13

---

**A.53.13 Method** `trace/getProfileAllSpikes`

**Summary:** Creates a `trace_allspikes_profile` object by collecting test results of a trace, analyzing each individual spike.

**Usage:**

```
profile_obj = getProfileAllSpikes(a_trace)
```

**Description:** Analyzes the spontaneous (`periodIniSpont`), pulse (`periodPulse`) and the recovery (`periodRecSpont`) periods separately and produces spike shape distribution results. Rate and CIP measurements are added to these.

**Parameters:**

`a_trace`: A trace object.

**Returns:**

`profile_obj`: A `trace_allspikes_profile` object.

**See also:** [trace](#) (p. 316), [trace\\_allspikes\\_profile](#) (p. 336)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2005/04/26

---

**A.53.14 Method** `trace/getRateResults`

**Summary:** Calculate test results related to spike rate for the whole spike period.

**Usage:**

```
results = getRateResults(a_trace, a_spikes)
```

**Parameters:**

`a_trace`: A trace object.

`a_spikes`: A spikes object.

**Returns:**

results: A structure associating test names with result values.

**See also:** [trace](#) (p. 316), [spikes](#) (p. 227), [spike\\_shape](#) (p. 215)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/08/30

---

#### A.53.15 Method `trace/getResults`

**Summary:** Runs all tests defined by this class and return them in a structure.

**Usage:**

```
results = getResults(a.trace, a.spikes)
```

**Parameters:**

`a.trace`: A trace object.

`a.spikes`: spikes object obtained from the trace object.

**Returns:**

`results`: A structure associating test names to values in ms and mV (or mA).

**See also:** [spike\\_shape](#) (p. 215), [spikes](#) (p. 227)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/09/13

---

#### A.53.16 Method `trace/getSpike`

**Summary:** Convert a spike in the trace to a `spike_shape` object.

**Usage:**

```
obj = getSpike(trace, spikes, spike_num, props)
```

**Description:** Creates a `spike_shape` object from desired spike. It is more efficient if you already have the spikes object.

**Parameters:**

`trace`: A trace object.

`spikes`: (Optional) A spikes object obtained from trace, calculated automatically if given as [].

`spike_num`: The index of spike to extract.

`props`: A structure with any optional properties.

`spike_id`: A prefix string added to the `spike_shape` object's id.

**Example:**

This will create an annotated plot of the third spike in `my_trace`:

```
>> plotFigure(plotResults(getSpike(my_trace, [], 3)))
```

**See also:** [spike\\_shape](#) (p. 215)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2005/04/19

---

#### A.53.17 Method `trace/lowpassfilt`

**Summary:** Applies a low-pass Butterworth filter to the trace data.

**Usage:**

```
t = lowpassfilt(t, n, cutoff_freq)
```

**Parameters:**

**t:** A trace object.

**n:** Order of the filter (e.g., 2)

**cutoff\_freq:** Cutoff frequency, max  $\leq$  sampling rate/2 [Hz].

**Returns:**

t: updated trace object.

**See also:** [trace](#) (p. 316), [butter](#) (p. ??), [filter](#) (p. ??), [filtfilt](#) (p. ??)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2010/04/08

---

#### A.53.18 Method `trace/medianfilt`

**Summary:** Applies a median filter to the trace data.

**Usage:**

```
t = medianfilt(t, window_size)
```

**Parameters:**

**t:** A trace object.

**window\_size:** N parameter of `medianfilt1` (default=3).

**Returns:**

t: updated trace object.

**See also:** [trace](#) (p. 316), [medianfilt1](#) (p. ??)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2010/04/05

---

#### A.53.19 Method `trace/minus`

**Summary:** Subtract trace object `right_tr` from `left_tr`.

**Usage:**

```
sub_tr = minus(left_tr, right_tr, props)
```

**Parameters:**

`left_tr`, `right_tr`: trace objects.

`props`: A structure with any optional properties.

**Returns:**

`sub_tr`: trace object with subtracted data of `left_tr`.

**Example:**

```
>> sub_tr = minus(vc1, vc2)
OR
>> sub_tr = vc1 - vc2;
plot the subtracted voltage clamp
>> plot(sub_tr)
```

**See also:** [trace](#) (p. 316), [minus](#) (p. ??)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2010/03/11

---

#### A.53.20 Method `trace/mtimes`

**Summary:** Matrix multiply trace object `right_tr` with `left_tr`.

**Usage:**

```
res_tr = mtimes(left_tr, right_tr, props)
```

**Parameters:**

`left_tr`, `right_tr`: trace objects.

`props`: A structure with any optional properties.

**Returns:**

`res_tr`: resulting trace object

**Example:**

```
>> res_tr = mtimes(vc1, vc2)
OR
>> res_tr = vc1 * vc2;
plot the resulting trace
>> plot(res_tr)
```

**See also:** [trace](#) (p. 316), [mtimes](#) (p. ??)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2010/03/11

---

#### A.53.21 Method `trace/periodWhole`

**Summary:** Returns the boundaries of the whole period of trace, t.

**Usage:**

```
whole_period = periodWhole(t)
```

**Parameters:**

t: A trace object.

**See also:** [period](#) (p. 162), [trace](#) (p. 316)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/07/30

---

#### A.53.22 Method `trace/plot`

**Summary:** Plots a trace.

**Usage:**

```
h = plot(t)
```

**Parameters:**

t: A trace object.

title\_str: (Optional) String to append to plot title.

props: A structure with any optional properties, passed to `plot_abstract`.

**Returns:**

h: Handle to figure object.

**See also:** [trace](#) (p. 316), [plot\\_abstract](#) (p. 180)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/08/04

---

### A.53.23 Method `trace/plotData`

**Summary:** Plots a trace.

**Usage:**

```
a_plot = plotData(t, title_str, props)
```

**Description:** If `t` is a vector of traces, returns a vector of plot objects.

**Parameters:**

`t`: A trace object.  
`title_str`: (Optional) String to append to plot title.  
`props`: A structure with any optional properties.  
    `timeScale`: 's' for seconds, or 'ms' for milliseconds.  
    `quiet`: If 1, only display given `title_str`.  
            (rest passed to `plot_abstract`.)

**Returns:**

`a_plot`: A `plot_abstract` object that can be visualized.

**See also:** [trace](#) (p. 316), [trace/plot](#) (p. 327), [plot\\_abstract](#) (p. 180)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/11/17

---

### A.53.24 Method `trace/plot_abstract`

**Summary:** Plots a trace by calling `plotData`.

**Usage:**

```
a_plot = plot_abstract(t, title_str, props)
```

**Description:** If `t` is a vector of traces, returns a vector of plot objects.

**Parameters:**

`t`: A trace object.  
`title_str`: (Optional) String to append to plot title.  
`props`: A structure with any optional properties.  
    `timeScale`: 's' for seconds, or 'ms' for milliseconds.  
    (rest passed to `plot_abstract`.)

**Returns:**

`a_plot`: A `plot_abstract` object that can be visualized.

**See also:** [trace](#) (p. 316), [trace/plot](#) (p. 327), [plot\\_abstract](#) (p. 180)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/11/17

---

#### A.53.25 Method `trace/plus`

**Summary:** Subtract trace object `right_tr` from `left_tr`.

**Usage:**

```
sub_tr = plus(left_tr, right_tr, props)
```

**Parameters:**

`left_tr`, `right_tr`: trace objects.

`props`: A structure with any optional properties.

**Returns:**

`sub_tr`: trace object with subtracted data of `left_tr`.

**Example:**

```
>> sub_tr = plus(vc1, vc2)
OR
>> sub_tr = vc1 + vc2;
plot the subtracted voltage clamp
>> plot(sub_tr)
```

**See also:** [trace](#) (p. 316), [plus](#) (p. ??)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2010/03/11

---

#### A.53.26 Method `trace/power`

**Summary:** `left_tr` to the power of `right_tr` (either can be scalars).

**Usage:**

```
res_tr = power(left_tr, right_tr, props)
```

**Parameters:**

`left_tr`, `right_tr`: trace objects.

`props`: A structure with any optional properties.

**Returns:**

`res_tr`: resulting trace object

**Example:**

```
>> res_tr = power(vc1, 3)
OR
>> res_tr = vc1 .^ 2;
plot the resulting trace
>> plot(res_tr)
```

**See also:** `trace` (p. 316), `power` (p. ??)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2010/11/09

---

#### A.53.27 Method `trace/rdivide`

**Summary:** Scalar divide trace object `left_tr` by `right_tr`.

**Usage:**

```
res_tr = rdivide(left_tr, right_tr, props)
```

**Parameters:**

`left_tr`, `right_tr`: trace objects.

`props`: A structure with any optional properties.

**Returns:**

`res_tr`: resulting trace object

**Example:**

```
>> res_tr = rdivide(vc1, vc2)
OR
>> res_tr = vc1 ./ vc2;
plot the resulting trace
>> plot(res_tr)
```

**See also:** `trace` (p. 316), `rdivide` (p. ??)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2010/11/09

---

#### A.53.28 Method `trace/runAvg`

**Summary:** Returns a trace which is the running average of this trace.

**Usage:**

```
avg_t = runAvg(t)
```

**Parameters:**

`t`: A trace object.

**Returns:**

`avg_t`: A trace object that contains the running average of this trace.

**See also:** `trace` (p. 316)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2008/05/14

---

**A.53.29 Method** `trace/saveAsNeuronVecAscii`

**Summary:** Writes trace in ASCII file in Neuron simulator Vector format.

**Usage:**

```
saveAsNeuronVecAscii(trace, filename)
```

**Description:** Data converted to Neuron units of nA and mV. Uses `writeNeuronVecAscii`.

**Parameters:**

`a_t`: A trace object.

`filename`: (optional) Full path to Neuron file. If omitted, `a_t.id` prefixed with 'neuron-vec-' is used as filename in current directory.

**Returns:**

**Example:**

```
saveAsNeuronVecAscii('myvec.dat', data, 1e-4, 1e-3, 'V', 'my membrane voltage');
```

**Author:** Cengiz Gunay [icengique@users.sf.net](mailto:icengique@users.sf.net), 2012/03/23

---

**A.53.30 Method** `trace/set`

**Summary:** Generic method for setting object attributes.

**Author:** Cengiz Gunay [icgunay@emory.edu](mailto:icgunay@emory.edu), 2004/10/08

---

**A.53.31 Method** `trace/setProp`

**Summary:** Generic method for setting optional object properties.

**Usage:**

```
obj = setProp(obj, prop1, val1, prop2, val2, ...)
```

**Description:** Modifies or adds property values. As many property name-value pairs can be specified.

**Parameters:**

`obj`: Any object that has a `props` field.

`attr`: Property name

`val`: Property value.

**Returns:**

obj: The new object with the updated properties.

**See also:**

**Author:** Cengiz Gunay jcgunay@emory.edu, 2004/11/22

---

**A.53.32 Method trace/spikes**

**Summary:** Convert trace to spikes object for spike timing calculations.

**Usage:**

```
obj = spikes(trace, a_period, plotit, minamp)
```

**Description:** Creates a spikes object.

**Parameters:**

trace: A trace object.

a\_period: A period object denoting the part of trace of interest  
(optional, if empty vector, taken as wholePeriod).

plotit: If non-zero, a plot is generated for showing spikes found  
(optional).

minamp: minimum amplitude that must be reached if using findFilteredSpikes.  
-i adjust as needed to discriminate spikes from EPSPs. (optional)

**See also:** [spikes](#) (p. 227)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2004/07/30

---

**A.53.33 Method trace/spike\_shape**

**Summary:** Convert averaged spikes in the trace to a spike\_shape object.

**Usage:**

```
obj = spike_shape(trace, spikes, props)
```

**Description:** Creates a spike\_shape object from averaged spikes. USE THIS ONLY  
IF YOU WANT TO USE AVERAGED SPIKE SHAPES.

**Parameters:**

trace: A trace object.

spikes: A spikes object on trace.

**See also:** [spike\\_shape](#) (p. 215)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2004/08/04

---

#### A.53.34 Method `trace/sqrt`

**Summary:** Square root of trace object.

**Usage:**

```
res_tr = sqrt(a_tr, props)
```

**Parameters:**

`a_tr`: A trace object.

`props`: A structure with any optional properties.

**Returns:**

`res_tr`: Resulting trace object.

**Example:**

```
>> a_tr = sqrt(vcl)
plot the result
>> plot(a_tr)
```

**See also:** `trace` (p. 316), `sqrt` (p. ??)

**Author:** Cengiz Gunay `jcgunay@emory.edu`, 2010/03/11

---

#### A.53.35 Method `trace/subsasgn`

**Summary:** Defines generic index-based assignment for objects.

**Author:** Cengiz Gunay `jcgunay@emory.edu`, 2006/02/06

---

#### A.53.36 Method `trace/subsref`

**Summary:** Defines generic indexing for objects.

**Author:** Cengiz Gunay `jcgunay@emory.edu`, 2004/08/04

---

#### A.53.37 Method `trace/times`

**Summary:** Scalar multiply trace object `right_tr` with `left_tr`.

**Usage:**

```
res_tr = times(left_tr, right_tr, props)
```

**Parameters:**

`left_tr`, `right_tr`: trace objects.

`props`: A structure with any optional properties.

**Returns:**

`res_tr`: resulting trace object

**Example:**

```
>> res_tr = times(vc1, vc2)
OR
>> res_tr = vc1 .* vc2;
plot the resulting trace
>> plot(res_tr)
```

**See also:** [trace](#) (p. 316), [times](#) (p. ??)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2010/03/11

---

### A.53.38 Method `trace/uminus`

**Summary:** Revert sign of trace object.

**Usage:**

```
res_tr = uminus(a_tr, props)
```

**Parameters:**

`a_tr`: A trace object.

`props`: A structure with any optional properties.

**Returns:**

`res_tr`: Resulting trace object.

**Example:**

```
>> a_tr = uminus(vc1)
OR
>> a_tr = -vc1;
plot the result
>> plot(a_tr)
```

**See also:** [trace](#) (p. 316), [uminus](#) (p. ??)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2010/03/11

---

### A.53.39 Method `trace/unary_op`

**Summary:** Generic unary operator applications for trace objects.

**Usage:**

```
result_tr = unary_op(a_tr, op_func, op_id, props)
```

**Parameters:**

`a_tr`: A trace object.  
`op_func`: Unary operation function (e.g., `@uminus`).  
`op_id`: A string to represent the operation that will show up in the returned id.  
`props`: A structure with any optional properties.

**Returns:**

`result_tr`: Resulting trace object.

**Example:**

```
>> result_tr = unary_op(vcl, @uminus, '-')
```

**See also:** [trace](#) (p. 316), [binary\\_op](#) (p. ??), [uminus](#) (p. ??), [sqrt](#) (p. ??)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2010/11/09

---

### A.53.40 Method `trace/withinPeriod`

**Summary:** Returns a trace object valid only within the given period.

**Usage:**

```
[obj a_period] = withinPeriod(t, a_period, props)
```

**Parameters:**

`t`: A trace object.  
`a_period`: The desired period  
`props`: A structure with any optional properties.  
`useAvailable`: If 1, don't stop if period not available, use maximum available.

**Returns:**

`obj`: A trace object  
`a_period`: The period object, updated if `useAvailable` is requested.

**See also:** [trace](#) (p. 316), [period](#) (p. 162)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/08/25

---

## A.54 Class `trace_allspikes_profile`

### A.54.1 Constructor `trace_allspikes_profile/trace_allspikes_profile`

**Summary:** Collects individual spike-based test results of a trace.

**Usage:**

```
obj = trace_allspikes_profile(a_trace, a_spikes, a_spikes_db, results_obj, props)
```

**Description:** This is a subclass of `results_profile`. It is made to be used from subclass constructors.

**Parameters:**

`a_trace`: A trace object.

`a_spikes`: A spikes object.

`spont_spikes_db`, `pulse_spikes_db`, `recov_spikes_db`: tests\_dbs with spontaneous, pulse and recovery period spike info.

`results_obj`: A `results_profile` object with test results.

`id`: Identification string.

`props`: A structure with any optional properties.

**Returns a structure object with the following fields:**

`trace`, `spikes`, `spont_spikes_db`, `pulse_spikes_db`, `recov_spikes_db`, `props`

**See also:** [trace](#) (p. 316), [spikes](#) (p. 227), [tests\\_db](#) (p. 255)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2005/05/04

---

### A.54.2 Method `trace_allspikes_profile/display`

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/08/04

---

### A.54.3 Method `trace_allspikes_profile/get`

**Summary:** Defines generic attribute retrieval for objects.

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/09/14

---

### A.54.4 Method `trace_allspikes_profile/set`

**Summary:** Generic method for setting object attributes.

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/10/08

---

## A.55 Class `trace_profile`

### A.55.1 Constructor `trace_profile/trace_profile`

**Summary:** Creates and collects test results of a trace.

**Description:** The first usage is fully customizable to be used from subclass constructors. The second usage generates the `spikes` and `spike_shape` objects, and collects some generic test results from them. This usage is only provided as an example and is not used practically.

**Parameters:**

`data_src`: The trace column OR the .MAT filename.  
`dt`: Time resolution [s]  
`dy`: y-axis resolution [ISI (V, A, etc.)]  
`props`: See trace object.

**Returns a structure object with the following fields:**

`trace`, `spikes`, `spike_shape`, `results`, `id`, `props`.

**See also:** [trace](#) (p. 316), [spikes](#) (p. 227), [spike\\_shape](#) (p. 215)

**Author:** Cengiz Gunay <cgunay@emory.edu>, 2004/09/13

---

### A.55.2 Method `trace_profile/get`

**Summary:** Defines generic attribute retrieval for objects.

**Author:** Cengiz Gunay <cgunay@emory.edu>, 2004/09/14

---

## A.56 Class `voltage_clamp`

### A.56.1 Constructor `voltage_clamp/voltage_clamp`

**Summary:** Voltage clamp object with current and voltage traces.

**Usage:**

```
a_vc = voltage_clamp(data_i, data_v, dt, di, dv, id, props)
```

**Description:** Uses the generic trace object to store voltage clamp I, V data. Inherits the common methods defined in trace.

**Parameters:**

`data_i, data_v`: Column vectors of I and V data traces.  
`dt`: Time resolution [s].

**di,dv:** y-axis resolution for I and V [A and V, resp]  
**id:** Identification string.  
**props:** A structure with any optional properties, such as:  
    **trace\_time\_start:** Samples in the beginning to discard [dt]  
    (see trace for more)

**Returns a structure object with the following fields:**

**v:** Voltage trace object, **i:** Current trace object, **time.steps:** Times of voltage steps. **v.steps:** Mean voltage values before each step (including one after last step) **i.steps:** Mean current values of steady-state before each step. **trace:** A parent trace object to inherit methods from.

**See also:** [trace](#) (p. 316), [period](#) (p. 162)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2010/02/05

---

### A.56.2 Method `voltage_clamp/calcCurPeaks`

**Summary:** Find current peaks during a voltage step.

**Usage:**

```
a_vc = calcCurPeaks(a_vc, step_num, props)
```

**Parameters:**

**a\_vc:** A voltage clamp object.  
**step\_num:** 1 for prestep, 2 for the first step, 3 for next, etc (default=2).  
**props:** A structure with any optional properties.  
    **pulseRange:** Use this range for finding peaks [dt].  
    **pulseStartRel:** Time to start relative to the step beginning (default=+.3) [ms]. If it has two elements, first one specifies the voltage step.  
    **pulseEndRel:** Time to end relative to the step end (default=-.3) [ms].  
    Like **pulseStartRel**, allows specifying voltage step.  
    **avgAroundMs:** If given, after finding a peak, average +/- ms around it to reduce noise.

**Returns:**

**a\_vc:** Updated voltage\_clamp object that contains props.iPeaks.

**Example:**

```
>> a_vc = calcCurPeaks(a_vc, 2)
```

**See also:** [voltage\\_clamp](#) (p. 337), [findSteps](#) (p. ??)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2010/03/30

---

### A.56.3 Method `voltage_clamp/get`

**Summary:** Defines generic attribute retrieval for objects.

**Author:** Cengiz Gunay `jcgunay@emory.edu`, 2004/09/14

---

### A.56.4 Method `voltage_clamp/getResults`

**Summary:** Calculate measurements and observations from this object.

**Usage:**

```
a_prof = getResults(a_vc, props)
```

**Parameters:**

`a_vc`: A `voltage_clamp` object.

`props`: A structure with any optional properties (inherited from `a_vc`).

`skipStep`: Number of voltage step times to skip at the start (default=0).

**Returns:**

`a_prof`: A `params_results_profile` object with parameters and results structures.

**Example:**

```
>> a_cs = params_tests_dataset(md1, md2)
>> a_db = params_tests_db(a_cs)
```

**See also:** [params\\_tests\\_dataset/loadItemProfile](#) (p. 134), [params\\_tests\\_dataset](#) (p. 131)

**Author:** Cengiz Gunay `jcgunay@emory.edu`, 2011/07/08

---

### A.56.5 Method `voltage_clamp/getTimeRelStep`

**Summary:** Return time relative to a voltage step.

**Usage:**

```
rel_time = getTimeRelStep(a_vc, step_num, rel_time, props)
```

**Parameters:**

`a_vc`: A `voltage_clamp` object.

`step_num`: Relative to this voltage step. 1 for start of trace, 2 for first voltage change, and so on.

`rel_time`: One or more time values in a vector [ms].

**props:** A structure with any optional properties.

**Returns:**

**rel\_time:** Time vector from start of trace [dt].

**Example:**

Select [-10, 50] ms range from step 1 into a new VC object.  
>> new\_vc = withinPeriod(a\_vc, period(getTimeRelStep(a\_vc, 1, [-10 50])))

**See also:** [voltage\\_clamp](#) (p. 337)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2010/10/18

---

### A.56.6 Method `voltage_clamp/minus`

**Summary:** Subtract current traces of voltage clamp object `right_vc` from `left_vc`.

**Usage:**

```
sub_vc = minus(left_vc, right_vc, props)
```

**Description:** Also returns the subtracted voltage trace in `props.sub_v` for visual inspection of match between the two voltage traces.

**Parameters:**

**left\_vc, right\_vc:** `voltage_clamp` objects.

**props:** A structure with any optional properties.

**Returns:**

**sub\_vc:** `voltage_clamp` object with subtracted current and voltage of `left_vc`.

**Example:**

```
>> sub_vc = minus(vc1, vc2)
OR
>> sub_vc = vc1 - vc2;
plot the subtracted voltage clamp
>> plot(sub_vc)
plot the subtracted voltage trace, too
>> plot(sub_vc.props.sub_v)
```

**See also:** [voltage\\_clamp](#) (p. 337)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2010/03/10

---

**A.56.7 Method** `voltage_clamp/periodWhole`

**Summary:** Returns the boundaries of the whole period.

**Usage:**

```
whole_period = periodWhole(a_vc)
```

**Parameters:**

`a_vc`: A `voltage_clamp` object.

**See also:** `period` (p. 162), `trace` (p. 316), `voltage_clamp` (p. 337)

**Author:** Cengiz Gunay `jcgunay@emory.edu`, 2010/04/08

---

**A.56.8 Method** `voltage_clamp/plotAllIVs`

**Summary:** Plot superposed I/V curves for activation, inactivation and steady-state.

**Usage:**

```
a_p = plotAllIVs(a_vc, title_str, props)
```

**Parameters:**

`a_vc`: A `voltage_clamp` object.

`title_str`: (Optional) Text to appear in the plot title.

`props`: A structure with any optional properties.

`quiet`: If 1, only use given `title_str`.

`skipStep`: Number of voltage steps to skip at the start (default=0).

**Returns:**

`a_p`: A `plot_abstract` object.

**Example:**

```
>> plotFigure(plotAllIVs(data_vc, 'I/V curves'))
```

**See also:** `model_data_vcs` (p. 115), `voltage_clamp` (p. 337), `plot_abstract` (p. 180), `plotFigure` (p. ??)

**Author:** Cengiz Gunay `jcgunay@emory.edu`, 2011/07/16

---

#### A.56.9 Method `voltage_clamp/plotSimCurrent`

**Summary:** Simulate voltage clamp current on a model channel and superpose on data.

**Usage:**

```
a_p = plotSimCurrent(a_vc, f_I_v, props)
```

**Parameters:**

`a_vc`: A `voltage_clamp` object.  
`f_I_v`: `param.func` object representing the model channel.  
`props`: A structure with any optional properties.  
    `delay`: If given, use as voltage clamp delay [ms].  
    `levels`: Only plot these voltage level indices.

**Returns:**

`a_p`: A `plot_abstract` object.

**Example:**

```
>> plotFigure(plotSimCurrent(a_vc))
```

**See also:** [param\\_I\\_v](#) (p. ??), [param\\_func](#) (p. ??), [plot\\_abstract](#) (p. 180)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2010/03/29

---

#### A.56.10 Method `voltage_clamp/plotSteadyIV`

**Summary:** Plot of the I/V curve at the end of a voltage step.

**Usage:**

```
a_p = plotSteadyIV(a_vc, step_num, title_str, props)
```

**Description:** Can be superposed with other I/V plot objects (see `plot_superpose`).

**Parameters:**

`a_vc`: A voltage clamp object.  
`step_num`: 1 for prestep, 2 for the first step, 3 for next, etc.  
`title_str`: (Optional) Text to appear in the plot title.  
`props`: A structure with any optional properties.  
    `quiet`: If 1, only use given `title_str`.  
    `curUnit`: Display units for current trace (default='nA').  
    `label`: add this as a line label to be used in superposed plots.  
    `plotPeaks`: If 1, use the `props.iPeaks` instead of steady-state.

**stepRange:** Uses the relative [start end] times in [ms] around time of step\_num to calculate the current averages. If vector has 3 items, first one is the step number, which can be different than step\_num.

**Returns:**

a\_p: A plot\_abstract object.

**Example:**

```
>> a_vc = abf_voltage_clamp('data-dir/cell-A.abf')
>> plotFigure(plotSteadyIV(a_vc, 2, 'I/V curve'))
```

**See also:** [voltage\\_clamp](#) (p. 337), [plot\\_abstract](#) (p. 180), [plotFigure](#) (p. ??), [plot\\_superpose](#) (p. 196)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2010/03/10

---

### A.56.11 Method voltage\_clamp/plot\_abstract

**Summary:** Plot of the I and V traces of voltage clamp object.

**Usage:**

```
a_p = plot_abstract(a_vc, title_str, props)
```

**Description:** Can be stacked or superposed with other plot objects.

**Parameters:**

a\_vc: A voltage clamp object.

title\_str: (Optional) Text to appear in the plot title.

props: A structure with any optional properties.

quiet: If 1, only use given title\_str.

vStep: Index of step with varying voltages (default=2).

label: add this as a line label to be used in superposed plots.

onlyPlot: 'i' for current and 'v' for voltage plot.

curUnit: Display units for current trace (default='nA').

vColors: If 1 (default), always use same colors for same voltage levels.

vColorsFunc: Function to get voltage colors (default=@lines)  
(rest passed to plot\_stack and plot\_abstract)

**Returns:**

a\_p: A plot\_abstract object.

**Example:**

```
>> a_vc = abf2voltage_clamp('data-dir/cell-A.abf')
>> plotFigure(plot_abstract(a_vc, 'I/V curve'))
```

See also: [plotSteadyIV](#) (p. ??), [plot\\_abstract](#) (p. 180), [plotFigure](#) (p. ??), [plot\\_superpose](#) (p. 196), [plot\\_stack](#) (p. 194)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2010/03/11

---

#### A.56.12 Method `voltage_clamp/saveDataTxt`

**Summary:** Save time and current into a simple text file as columns.

**Usage:**

```
saveDataTxt(a_vc, props)
```

**Description:** File will be written to the same directory as the original vc was loaded from (using the value of `props.filename`).

**Parameters:**

`a_vc`: A `voltage_clamp` object.

`props`: A structure with any optional properties.

`addName`: String to append to file name.

`saveV`: Save voltage as well.

**Returns:**

**Example:**

```
>> saveDataTxt(a_vc)
```

See also: [voltage\\_clamp](#) (p. 337)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2010/03/29

---

#### A.56.13 Method `voltage_clamp/scale_IClCa_NaP_sub_IClCa`

**Summary:** Scale IClCa and steady-state of INaP from voltage-step protocol data and subtract IClCa.

**Usage:**

```
params = scale_IClCa_NaP_sub_IClCa(a_vc, props)
```

**Description:** Made for Na recordings from the oocyte. While estimating IClCa, one needs to consider INaP since it counteracts IClCa.

**Parameters:**

`a_vc`: A voltage clamp object.

`props`: A structure with any optional properties.

**saveData:** If 1, save subtracted data into a new text file (default=0).

**plotPrepulse:** If 1, show plot of prepulse current change with voltage (default=0).

**Returns:**

params: Structure with tuned parameters.

**Example:**

```
>> a_vc = abf_voltage_clamp('data-dir/cell-A.abf')
>> params = scale_IClCa_NaP_sub_IClCa(a_vc)
```

**See also:** [voltage\\_clamp](#) (p. 337), [param\\_I\\_v](#) (p. ??), [param\\_func](#) (p. ??)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2010/02/05

---

### A.56.14 Method `voltage_clamp/scale_sub_cap_leak`

**Summary:** Scale capacitance and leak artifacts to subtract them.

**Usage:**

```
[f_capleak sub_vc] = scale_sub_cap_leak(a_vc, props)
```

**Parameters:**

**a\_vc:** Full path to a\_vc.

**props:** A structure with any optional properties.

**capLeakModel:** Model object to fit (default obtained from `param_cap_leak_int.t`). Can choose object obtained from another function such as: `param_Rs_cap_leak_int.t`, `param_cap_leak_2comp_int.t`.

**fitRange:** Start and end times of range to apply the optimization [ms].

**fitRangeRel:** Start and end times of range relative to first voltage step [ms]. Specify any other voltage step as the first element.

**fitLevels:** Indices of voltage/current levels to use from clamp data. If empty, not fit is done.

**dispParams:** If non-zero, display params every once this many iterations.

**dispPlot:** If non-zero, update a plot of the fit at end of this many iterations.

**saveData:** If 1, save subtracted data into a new text file (default=0).

**quiet:** If 1, do not include cell name on title.

**period:** Limit the subtraction to this period of a\_vc.

**Returns:**

**f\_capleak:** Updated function with fitted parameters **sub\_vc:** `voltage_clamp` object with passive-subtracted I trace.

### Example:

```
>> capLeakReCe_f = ...
param_Re_Ce_cap_leak_int_t(...
struct('Re', 47, 'Ce', 12, 'gL', .56, ...
'EL', -67, 'Cm', 270, 'delay', 0.21), ...
cap, leak, Re and Ce');
>> [capLeakReCe_f sub_cap_leak_vc] = ...
scale_sub_cap_leak(...
abf2voltage_clamp('calcium.abf'), '', ...
struct('capLeakModel', capLeakReCe_f, ...
'fitRangeRel', [-.2 165], 'fitLevels', 1:5, ...
'optimset', struct('Display', 'iter')));
```

See also: [param\\_I\\_v](#) (p. ??), [param\\_func](#) (p. ??)

Author: Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2010/01/17

---

### A.56.15 Method `voltage_clamp/set`

**Summary:** Generic method for setting object attributes.

Author: Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/10/08

---

### A.56.16 Method `voltage_clamp/setLevels`

**Summary:** Choose which voltage and current step levels to keep.

#### Usage:

```
a_vc = setLevels(a_vc, levels, props)
```

#### Parameters:

**a\_vc:** A `voltage_clamp` object.

**levels:** Only keep these voltage and current level indices.

**props:** A structure with any optional properties.

#### Returns:

**a\_vc:** A `voltage_clamp` object that contains only the selected levels.

### Example:

```
>> a_vc = setLevels(a_vc, 1:3)
```

See also: [voltage\\_clamp](#) (p. 337)

Author: Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2010/03/30

---

#### A.56.17 Method `voltage_clamp/simModel`

**Summary:** Simulate model channel current using voltage clamp.

**Usage:**

```
model_vc = simModel(a_vc, f_I_v, props)
```

**Description:** Often the delay is already included in the model, which is better because sub-dt precision can be achieved using interpolation.

**Parameters:**

**a\_vc:** A `voltage_clamp` object.  
**f\_I\_v:** `param_func` object representing the model channel.  
**props:** A structure with any optional properties.  
    **delay:** If given, use as voltage clamp delay [ms].  
    **levels:** Only simulate these voltage level indices.  
    **period:** Limit the simulation to this period of `a_vc`.  
    **updateVm:** If 1, update `v` trace from simulation `Vm`.

**Returns:**

**model\_vc:** A `voltage_clamp` object with simulated current data and the original voltage data.

**Example:**

```
>> I_Ca = param_I_v([1 1 .0077 58], m_Ca, h_Ca, 'I_Ca', ...  
struct('paramRanges', ...  
4; 0 1; 0 1e3; 100 200'))  
>> model_vc = simModel(a_vc, I_Ca)
```

**See also:** `param_I_v` (p. ??), `param_func` (p. ??), `plot_abstract` (p. 180)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2010/03/29

---

#### A.56.18 Method `voltage_clamp/subsref`

**Summary:** Defines generic indexing for objects.

**Author:** Cengiz Gunay jcgunay@emory.edu, 2004/08/04

---

**A.56.19 Method** `voltage_clamp/updateSteps`

**Summary:** Update voltage step time and magnitude info.

**Usage:**

```
a_vc = updateSteps(a_vc, props)
```

**Description:** Called by `simModel`.

**Parameters:**

**a\_vc:** A `voltage_clamp` object.

**props:** A structure with any optional properties.

**Returns:**

**a\_vc:** Updated object.

**See also:** [voltage\\_clamp](#) (p. 337)

**Author:** Cengiz Gunay `jcgunay@emory.edu`, 2010/10/18

---

**A.56.20 Method** `voltage_clamp/withinPeriod`

**Summary:** Returns a `voltage_clamp` object valid only within the given period.

**Usage:**

```
[a_vc a_period] = withinPeriod(a_vc, a_period, props)
```

**Parameters:**

**a\_vc:** A `voltage_clamp` object.

**a\_period:** The desired period [dt].

**props:** A structure with any optional properties.

**useAvailable:** If 1, don't stop if period not available, use maximum available.

**Returns:**

**a\_vc:** A `voltage_clamp` object **a\_period:** The period object, updated if `useAvailable` is requested.

**See also:** [trace/withinPeriod](#) (p. 335), [trace](#) (p. 316), [period](#) (p. 162)

**Author:** Cengiz Gunay `jcgunay@emory.edu`, 2010/03/29

---

## A.57 Utility functions

### A.57.1 Function `functions/abf2load`

---

### A.57.2 Function `functions/abf2voltage_clamp`

**Summary:** Load I and V traces from an ABF file and make a `voltage_clamp` object.

**Usage:**

```
a_vc = abf2voltage_clamp(filename, sup_id, props)
```

**Parameters:**

**filename:** Full path to filename.

**sup\_id:** (Optional) Concatenated to cell filename as id of `voltage_clamp` object.

**props:** A structure with any optional properties.

**ichan:** Current channel number or ':' for all channels when there is more than one to choose.

**actualProtocols:** Means current trace is a TTL pulse and its magnitude is meaningless.

**Returns:**

**a\_vc:** A `voltage_clamp` object.

**Example:**

```
>> a_vc = abf2voltage_clamp('data-dir/cell-A.abf', 'my first cell');  
>> plot(a_vc);
```

**See also:** [loadVclampAbf](#) (p. ??), [abf2load](#) (p. ??), [voltage\\_clamp](#) (p. 337)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2010/03/11

---

### A.57.3 Function `functions/abfload`

---

### A.57.4 Function `functions/array2str`

**Example:**

```
string = array2str([1 2 3 4 6 8 10 12 13])  
the output is '[1:4 6:2:12 13]'
```

---

### A.57.5 Function `functions/balanceInputProbs`

**Summary:** Balances samples according to prior class probabilities of the outputs.

**Usage:**

```
[new_inputs, new_outputs] = balanceInputProbs(a_class_inputs, a_class_outputs, balance_ratio, props)
```

**Description:** Uses the method in Lawrence, burns, Back, Tsoi and Lee Giles "Neural network classification and prior class probabilities" for probabilistic balancing of input and output samples when the number of samples in each class is vastly different and causes problems with classification without balancing.

**Parameters:**

`a_class_inputs`, `a_class_outputs`: Input and output vectors.

`balance_ratio`: c.s, between 0 and 1. If 1, equal samples from each class if used. If 0, prior class probabilities are followed.

`props`: A structure with any optional properties.

`repeatSamples`: If 1, repeats the smaller class samples to match with larger class. Otherwise, takes the minimal number of samples to avoid repetitions (default=1).

**Returns:**

`new_inputs`, `new_outputs`: New input and output vectors.

**See also:** [approxMappingNNet](#) (p. ??), [tests\\_db](#) (p. 255)

**Author:** Cengiz Gunay ;cgunay@emory.edu, 2008/01/09

---

### A.57.6 Function `functions/boxplotp`

**Description:** `BOXPLOT(X,NOTCH,SYM,VERT,WHIS,PROPS)` produces a box and whisker plot for each column of X. The box has lines at the lower quartile, median, and upper quartile values. The whiskers are lines extending from each end of the box to show the extent of the rest of the data. Outliers are data with values beyond the ends of the whiskers.

---

### A.57.7 Function `functions/boxutilp`

**Description:** `BOXUTILP(X)` is a utility function for `BOXPLOT`, which calls `BOXUTILP` once for each column of its first argument. Use `BOXPLOT` rather than `BOXUTILP`.

---

#### A.57.8 Function `functions/calcGraphNormPtsRatio`

**Summary:** Return the ratios of normalized to point units for dimensions of axis.

**Usage:**

```
[ratio_x, ratio_y] = calcGraphNormPtsRatio(grfx_handle)
```

**Description:** Used for finding character sizes given the size of an axis. Normally if the plot is resized, the characters may take up too much space or may not fit anymore unless the spacing is corrected.

**Parameters:**

`grfx_handle`: A graphics handle to an existing axis or figure.

**Returns:**

`ratio_x`, `ratio_y`: Normalized to points ratio for axis width and height, respectively.

**Example:**

```
To find the normalized distance for a 10pt character:  
>> dx = 10 * calcGraphNormPtsRatio(my_figure_handle);
```

**Author:** Cengiz Gunay `jcgunay@emory.edu`, 2006/03/05

---

#### A.57.9 Function `functions/cell2str`

**Summary:** Creates a tab-delimited string from the cell array's contents.

**Usage:**

```
a_str = cell2str(a_cell, props)
```

**Parameters:**

`a_cell`: A cell matrix to be tabularized.

`props`: A structure with any optional properties.

**Returns:**

`a_str`: LaTeX formatted table string.

**See also:**

**Author:** Cengiz Gunay `jcgunay@emory.edu`, 2004/12/09

---

#### A.57.10 Function `functions/cell2TeX`

**Summary:** Creates LaTeX string of a formatted table with the cell array's contents.

**Usage:**

```
tex_string = cell2TeX(a_cell, props)
```

**Parameters:**

`a_cell`: A cell matrix to be tabularized.

`props`: A structure with any optional properties.

`hasTitleRow`: The first row contains titles.

`titleColWidth`: If specified, makes title cells `\parbox`'es with the given width.

`hasTitleCol`: The first column contains titles.

`numFormat`: Specify a sprintf-style format for displaying numbers.

**Returns:**

`tex_string`: LaTeX formatted table string.

**See also:**

**Author:** Cengiz Gunay `jcgunay@emory.edu`, 2004/12/09

---

#### A.57.11 Function `functions/chanTables2DB`

**Summary:** Creates a DB with channel tables exported from Genesis.

**Usage:**

```
a_chans_db = chanTables2DB(tables, id, props)
```

**Parameters:**

`tables`: Structures returned from the dump files generated by `dump_chans.g`.

`id`: String that identify the source of the tables structure.

`props`: A structure with any optional properties.

(rest passed to `tests_db`.)

**Returns:**

`a_chans_db`: A `tests_db` object containing channel tables.

**See also:** [trace](#) (p. 316), [trace/plot](#) (p. 327), [plot\\_abstract](#) (p. 180), [GP/common/dump\\_chans.g \(Genesis\)](#) (p. ??)

**Author:** Cengiz Gunay `jcgunay@emory.edu`, 2007/03/07

---

**A.57.12 Function** functions/collectspikes

**Author:** jadelgado@biology.emory.edu

---

**A.57.13 Function** functions/colormapBlueCrossRed

**Summary:** Blue to red crossing colormap, with a black-colored zero-crossing.

**Usage:**

```
colors = colormapBlueCrossRed(num_half_colors)
```

**Description:** Colormap contains  $(2 * \text{num\_half\_colors} + 1)$  colors, where  $(\text{num\_half\_colors} + 1)$  is the zero crossing.

**Parameters:**

**num\_half\_colors:** Number of colors to generate on one of the red or blue scales.

**props:** A structure with any optional properties.

**Returns:**

colors: RGB color matrix to be passed to colormap function.

**See also:** [colormap](#) (p. ??)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2006/06/05

---

**A.57.14 Function** functions/defaultValue

**Summary:** If variable unset (either nonexistent or empty), assign it a default value. Otherwise the variable remains unchanged.

**Usage:**

```
var = defaultValue(varname, a_defaultvalue)
```

**Description:** If the variable has already been defined, it keeps unchanged. If the variable doesn't exist or is an empty matrix, it will be assigned a default value to it.

**Parameters:**

**varname:** a string. the name of the variable.

**a\_defaultvalue:** value for the variable.

**Example:**

```
SamplingRate = defaultValue('SamplingRate', 10);
```

**Author:** Li, Su

---

#### A.57.15 Function `functions/diff2T`

**Summary:** Estimate of second derivative using Taylor expansion.

**Usage:**

`deriv2 = diff2T(x, dy)`

**Description:** 
$$\frac{d^2 x}{dy^2} \approx \frac{x(k-2) - 2x(k-1) + x(k) + x(k+1) - x(k+2)}{dy^2}$$

**Parameters:**

**x:** A vector of  $x = f(y)$ .

**dy:** The resolution of the discrete points in the vector.

**Returns:**

**deriv2:** Estimate of the derivative.

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/11/15

---

#### A.57.16 Function `functions/diff2T_h4`

**Summary:** Estimate of second derivative using Taylor expansion (derived with same method as `diffT`).

**Usage:**

`deriv2 = diff2T_h4(x, dy)`

**Description:** 
$$\frac{d^2 x}{dy^2} \approx \frac{x(k-2) - x(k-1) - x(k+1) + x(k+2)}{dy^2}$$

**Parameters:**

**x:** A vector of  $x = f(y)$ .

**dy:** The resolution of the discrete points in the vector.

**Returns:**

**deriv2:** Estimate of the derivative.

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2005/04/15

---

#### A.57.17 Function `functions/diff3T`

**Summary:** Estimate of third derivative using Taylor expansion.

**Usage:**

`deriv3 = diff3T(x, dy)`

**Description:** 
$$\frac{d^3 x}{dy^3} \approx \frac{x(k+3) - 8 * x(k+2) + 13 * x(k+1) - 7 * x(k) + 2 * x(k-1) - x(k-2)}{12 * dy^3}$$

**Parameters:**

**x:** A vector of  $x = f(y)$ .

**dy:** The resolution of the discrete points in the vector.

**Returns:**

`deriv3`: Estimate of the derivative.

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/11/15

---

#### A.57.18 Function `functions/diff3T_h4`

**Summary:** Estimate of third derivative using Taylor expansion (derived with same method as `diffT` and `diff2T_h4`).

**Usage:**

`deriv2 = diff3T_h4(x, dy)`

**Description:** 
$$\frac{d^3 x}{dy^3} \approx \frac{x(k+4) - 4 * x(k+3) + 6 * x(k+2) - 4 * x(k+1) + x(k)}{12 * dy^3}$$

**Parameters:**

**x:** A vector of  $x = f(y)$ .

**dy:** The resolution of the discrete points in the vector.

**Returns:**

`deriv2`: Estimate of the derivative.

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2005/04/18

---

**A.57.19 Function** functions/diffT

**Summary:** Estimate of first derivative using Taylor expansion.

**Usage:**

```
deriv = diffT(x, dy)
```

**Description:** 
$$\frac{dx}{dy} \approx \frac{x(k-2) - 8 * x(k-1) + 8 * x(k+1) - x(k+2)}{12 * dy}$$

**Parameters:**

**x:** A vector.

**dy:** The resolution of the discrete points in the vector.

**Returns:**

deriv: Estimate of the first derivative.

**Author:** Cengiz Gunay [cgunay@emory.edu](mailto:cgunay@emory.edu), 2004/11/15

---

**A.57.20 Function** functions/fillederrorbar

**Summary:** Plots an errorbar with the middle points filled with the pen color.

**Usage:**

```
handles = fillederrorbar(...)
```

**Parameters:**

(see errorbar)

**Returns:**

handles: Handles to graphics objects.

**See also:**

**Author:** Cengiz Gunay [cgunay@emory.edu](mailto:cgunay@emory.edu), 2004/10/13

---

**A.57.21 Function** functions/findspikes

**Author:** Li, Su based on the original of Alfonso Delgado-Reyes

---

**A.57.22 Function** functions/findspikes\_old

**Author:** [adelgado@biology.emory.edu](mailto:adelgado@biology.emory.edu), 2003-03-31

---

**A.57.23 Function** functions/findVectorInMatrix

**Summary:** Finds rows of data that match row.

**Usage:**

```
idx = findVectorInMatrix(data, row)
```

**Description:** Matlab's eq (==) command unfortunately doesn't allow this directly.

**Parameters:**

**data:** A matrix or column vector.

**row:** A row vector.

**Returns:**

**idx:** Indices of matching rows in the original data matrix.

**See also:**

**Author:** Cengiz Gunay ;cgunay@emory.edu, 2005/09/1

---

**A.57.24 Function** functions/getFieldDefault

**Summary:** Get a field from a struct and return the default\_value if field does not exist.

**Usage:**

```
value = getFieldDefault(structure, fieldname, default_value)
```

**Parameters:**

**fieldname:** Field name.

**default\_value:** Value to return if field doesn't exist.

**Author:** Li, Su - 2007

---

**A.57.25 Function** functions/getfuzzyfield

**Author:** Li, Su - 2007

---

**A.57.26 Function** functions/gettracelist2

**Summary:** Gets a list of the form: '1 3 7-10' and returns a column vector with the traces numbers, and the number of traces.

**Usage:**

```
[traces, ntraces] = gettracelist2('list');
```

**Description:** Please note the space between single traces and the dash for ranges of traces.

**Author:** jadelgado@biology.emory.edu;

---

**A.57.27 Function** functions/growRange

**Summary:** Returns the maximal range from rows of axis limits.

**Usage:**

```
range = growRange(ranges)
```

**Parameters:**

**ranges:** A matrix where each row is return val of axis func.

**Returns:**

**range:** The maximal range obtained that includes all given axes.

**See also:**

**Author:** Cengiz Gunay jcgunay@emory.edu, 2004/10/13

---

**A.57.28 Function** functions/interpValByIndex

**Summary:** Finds the interpolated value by using the real valued index from the data vector.

**Usage:**

```
val = interpValByIndex(idx, data)
```

**Description:** Parameters: idx: A real-valued index. data: A data vector.

**Returns:**

**val:** the value taken from the nearest integer indices of data and interpolated.

**Example:**

```
>> a= [1 2 3];  
>> interpValByIndex(1.5, a)  
ans =  
1.5000
```

**See also:** [spike\\_shape](#) (p. 215)

**Author:** Cengiz Gunay ;cgunay@emory.edu, 2004/08/02

---

### A.57.29 Function functions/loadtraces

**Parameters:**

**file:** PCDX file.  
**tracelist:** A string of trace description, such as '1-10'.  
**channel:** Channel to read from.  
**quiet:** (Optional) If 1, produce no print outs.

**Author:** jadelgado@biology.emory.edu

---

### A.57.30 Function functions/loadVclampAbf

**Summary:** Load I and V traces from an ABF file.

**Usage:**

```
[time, dt, data_i, data_v, cell_name] = loadVclampAbf(filename, props)
```

**Description:** If filename is wrong or not specified, a dialog will pop up to choose file. ABF2 files are not fully supported (see abf2load.m). Time is assumed to be in s and converted to ms.

**Parameters:**

**filename:** Full path to filename.  
**props:** A structure with any optional properties.  
    **scaleI:** multiplier to correct I values to the units specified in file.  
    **actualProtocols:** Means current trace is a TTL pulse and its magnitude is meaningless.

**Returns:**

**time:** Time vector for measurements [ms], **dt:** Time step [ms], **data\_i:** Current traces (assumed [nA]), **data\_v:** Voltage traces (assumed [mV]), **cell\_name:** Extracted from the file name part of the path.

**Example:**

```
>> [time, dt, data_i, data_v, cell_name] = ...  
loadVclampAbf('data-dir/cell-A.abf')  
>> plotVclampStack(time, data_i, data_v, cell_name);
```

**See also:** [abf2load](#) (p. ??), [plotVclampAbf](#) (p. ??), [plotVclampStack](#) (p. ??)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2009/12/17

---

### A.57.31 Function `functions/logLevels`

**Summary:** Returns a logarithmic-scaled series between `min_val` and `max_val` with `num_levels` elements.

**Usage:**

```
levels = logLevels(min_val, max_val, num_levels)
```

**Parameters:**

`min_val`, `max_val`: The low and high boundaries for the output value.  
`num_levels`: Number of elements to produce, including the boundaries.

**Returns:**

`levels`: A column vector of logarithmic series between `min_val` and `max_val`.

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2005/04/18

---

### A.57.32 Function `functions/makeIdealClampV`

**Summary:** Make voltage traces that mimic an ideal voltage clamp.

**Usage:**

```
[trace_v] = makeIdealClampV(t_vals, pre_v, pulse_v, post_v, dt, id, props)
```

**Parameters:**

`t_vals`: Vector with times of pulse start, end and trace end [ms].  
`pre_v`, `post_v`: Holding and final voltage values [mV].  
`pulse_v`: Vector of variable voltage steps [mV].  
`dt`: Resolution of time in trace produced [ms].  
`id`: An identifying string.  
`props`: A structure with any optional properties.  
(Rest passed to trace)

**Returns:**

trace\_v: A trace object with the voltage traces.

**Example:**

```
>> tr_v = makeIdealClampV([10 100 110], -90, -80:10:60, -10, 1e-1, ...  
'Na chan voltage clamp protocol')  
>> plot(tr_v)  
>> vc_test = voltage_clamp(data_i, tr_v.data, tr_v.dt, 1e-9, 'sim Na data')
```

**See also:** [trace](#) (p. 316), [voltage\\_clamp](#) (p. 337)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2010/10/07

---

### A.57.33 Function functions/makeIdx

**Summary:** Prepare the idx structure from names.

**Usage:**

```
idx = makeIdx(names)
```

**Description:** Helper function.

**Parameters:**

names: Cell array of names for a db dimension.

**Returns:**

idx: Structure associating names to array indices.

**See also:** [tests\\_db](#) (p. 255)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/09/17

---

### A.57.34 Function functions/maxima

**Summary:** Find all local maxima.

**Usage:**

```
x_idx = maxima(x)
```

**Description:** Finds derivative sign-flipping points where the second derivative is less than zero.

**Parameters:**

x: A vector.

**Returns:**

x\_idx: Indices of maxima.

**Author:** Cengiz Gunay jcgunay@emory.edu, 2005/04/18

---

**A.57.35 Function** functions/meanSpikeFreq

**Summary:** Returns the mean firing frequency in Hz according to mean \ inter-spike-interval of the given spike train and the time resolution dt.

**Usage:**

```
meanFreq = meanSpikeFreq( spike_train, dt, period )
```

**Description:** Parameters: spike\_train: Spike times returned by findspikes dt: Time step size [s] period: Duration of the total time period [dt]

**See also:**

**Author:** Cengiz Gunay jcgunay@emory.edu, 2004/03/08

---

**A.57.36 Function** functions/mergeStructs

**Summary:** Merges all the structures given as arguments and makes a single structure.

**Usage:**

```
results = mergeStructs( struct1 [, struct2, ...] )
```

**Description:** The fields will in earlier arguments will have priority. So, while merging two structs, if there are duplicate fields, the fields in the first will be preserved.

**Parameters:**

struct(n): A structure.

**Returns:**

results: The merged structure.

**Example:**

```
mergeStructs( struct('hello', 1), struct('bye', 2) );  
=> struct('hello', 1, 'bye', 2)
```

**Author:** Cengiz Gunay jcgunay@emory.edu, 2004/09/13

---

### A.57.37 Function `functions/mergeStructsRecursive`

**Summary:** Merges given structures into a single structure, merging substructures recursively.

**Usage:**

```
results = mergeStructsRecursive( struct1 [, struct2, ...] )
```

**Description:** The fields in earlier arguments will have priority. So, while merging two structs, if there are duplicate fields, the fields in the first will be preserved. If a common field is a structure, then `mergeStructsRecursive` is called to merge their contents.

**Parameters:**

`struct(n)`: A structure.

**Returns:**

`results`: The merged structure.

**Example:**

```
>> mergeStructsRecursive( struct('hello', struct('a', 1),  
struct('hello', struct('b', 2)) );  
=> struct('hello', struct('a', 1, 'b', 2)
```

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/09/13

---

### A.57.38 Function `functions/ns_CIPlist`

**Author:** Dawid Kurzyniec

---

### A.57.39 Function `functions/ns_load_tracesets`

**Summary:** Return a set of `physiol.cip_traceset` objects loaded from a single NeuroSAGE HDF5 file.

**Usage:**

```
a_tss = ns_load_tracesets(data_src, props)
```

**Description:** This allows customized loading each NeuroSAGE file separately. Only loads traces that has the word 'cip' or 'spont' in the NeuroSAGE sequence name. Sample rate, channel gain and dy values are read from the acquisition data.

**Parameters:**

`data_src`: A pattern for one or more NeuroSAGE filename or structure output of `ns_open_file`.

**props:** A structure with any optional properties.

**VmChan:** (Optional) If a string, read voltage trace from channel having this string (e.g., 'Ampl Vm'). If numeric, use as channel number. Added to the `neuron_id` to distinguish multiple neurons recorded in same file. If not specified, the first voltage channel is used.

**ImChan:** (Optional) Similar to `VmChan` for reading current trace. Does not affect `neuron_id`.

**VGain, IGain:** for HDF5 files, these two fields only works as a default value when the gains are not specified in the file.

**IncludeSeq:** A string or cell array of strings specifying keywords in sequence name to look for.

**ExcludeSeq:** A string or cell array of strings specifying keywords in sequence name to avoid searching.

**addTreats:** Structure of default treatment names and their values for this traceset to keep consistent accross tracesets. Use only lowercase in treatment names.

**fixTreats:** Override wrong treatment information with these. Same format as `addTreats`.

**renameTreats:** Structure with from-to rename pairs.

**trials:** A vector of trials to load from the file. All others are skipped. (All other props are passed to `physiol_cip_traceset`)

### Returns:

**a\_tss:** Cell array of `physiol_cip_traceset` objects.

**See also:** [physiol\\_cip\\_traceset\\_fileset](#) (p. 175), [physiol\\_cip\\_traceset](#) (p. 170), [params\\_tests\\_dataset](#) (p. 131)

**Author:** Li, Su; Cengiz Gunay [cgunay@emory.edu](mailto:cgunay@emory.edu); and Jeremy Edgerton, 2007/12/18

---

### A.57.40 Function `functions/parseFilenameNamesVals`

**Summary:** Parses filename to extract names and values of parameters.

### Usage:

```
names_vals = parseFilenameNamesVals(filename, props)
```

**Description:** Parses the given string (e.g., filename) that has names and values separated by underscores (.).

### Parameters:

**filename:** file name (no need to exist)

**props:** Structure with optional properties:

**namesFirst:** If 1, names precede values (default=1).

**skipNum:** Number of words to skip (default=0). If -1, all words are skipped until a number is found. this makes sense when namesFirst=0.

**Returns:**

**names\_vals:** A two-column cell array with names and values. **pre\_name:** (Optional) Skipped prefix words in the filename.

**Example:**

```
Names first:
>> nv = parseFilenameNamesVals('hello_boys_6_girls_4.txt', struct('skipNum', 1))
nv =
'girls' [6]
'boys' [4]
Same result with values first:
>> nv = parseFilenameNamesVals('data/hello_6_girls_4_boys.txt',
struct('namesFirst', 0, 'skipNum', -1))
```

**Author:** Cengiz Gunay jcgunay@emory.edu, 2004/03/10

---

### A.57.41 Function functions/parseGenesisFilename

**Summary:** (OBSOLETE, see `parseFilenameNamesVals`) Parses the GENESIS filename to get names and values of simulation parameters. Usage: `names_vals = parseGenesisFilename(filename)`

**Description:** Parameters: `filename`: GENESIS filename (no need to exist)

**Returns:**

**names\_vals:** A two-column cell array with names and values.

**See also:** `parseFilenameNamesVals` (p. ??)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2004/03/10

---

### A.57.42 Function functions/plotColormap

**Summary:** Colormap plot that requires displaying a colorbar.

**Usage:**

```
h = plotColormap(data, a_colormap, num_colors, props)
```

**Description:** Mainly serves to format the colorbar, which can only be plotted after we prepare the main axis. Thus it cannot be easily integrated into `plot_stack`.

### Parameters:

**data:** 2D matrix with image data or cell array to be passed as arguments to arbitrary plot command (see props).  
**a\_colormap:** Colormap vector, function name or handle to colormap (e.g., 'jet').  
**num\_colors:** Parameter to be passed to the a\_colormap.  
**props:** A structure with any optional properties.  
    **command:** Plot command to interpret data (default='image').  
    **colorbar:** If given, show colorbar on plot.  
    **colorbarProps:** Set colorbar axis properties.  
    **colorbarLabel:** Set colorbar y-axis label.  
    **truncateDecDigits:** Truncate labels to this many decimal digits.  
    **minValue,maxValue:** Minimal and maximal values represented by 1, num\_colors to annotate the colorbar, resp.  
    **reverseYaxis:** If 1, display y-axis values in reverse (default=0).

### Returns:

**h:** Handle to main plot object (e.g., image).

**See also:** [colormap](#) (p. ??), [colorbar](#) (p. ??)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2006/06/05

---

### A.57.43 Function functions/prefixStruct

**Summary:** Adds the given prefix to each of the field names in the structure.

### Usage:

```
new_struct = prefixStruct(a_struct, prefix_str)
```

### Parameters:

**a\_struct:** A structure.  
**prefix\_str:** A string to be prefixed to each field name.

### Returns:

**new\_struct:** The new structure.

### Example:

```
prefixStruct( struct('bye', 1), 'hello');  
=> struct('hellobye', 1)
```

**Author:** Cengiz Gunay jcgunay@emory.edu, 2004/12/22

---

**A.57.44 Function** functions/properAlphaNum

**Summary:** Replaces characters in string to make it only alphanumeric.

**Usage:**

```
a_label = properAlphaNum( a_label )
```

**Description:** It will only keep the character set 'A-Z a-z 0-9 \_.'. It will also prepend 'a\_' if the label starts with a number.

**Parameters:**

**a\_label:** A label string.

**Returns:**

**a\_label:** The corrected proper a\_label.

**Example:**

```
>> a_label = properAlphaNum('to \this _day+1 and ^5')
ans = 'tothis_day1and5'
```

**Author:** Cengiz Gunay jcgunay@emory.edu, 2011/01/19

---

**A.57.45 Function** functions/properTeXFilename

**Summary:** Replaces characters in string to make it a valid filename for inclusion in TeX documents.

**Usage:**

```
filename = properTeXFilename( filename )
```

**Description:** It will replace characters like space, '/', '.', etc.

**Parameters:**

**filename:** An input filename string (without extension!).

**Returns:**

**filename:** The corrected proper filename.

**Example:**

```
>> fname = properTeXFilename('hello world/1')
ans = 'hello_world+1'
```

**Author:** Cengiz Gunay jcgunay@emory.edu, 2005/12/20

---

**A.57.46 Function** functions/properTeXLabel

**Summary:** Replaces characters in string or cell array of strings to make it valid in TeX documents.

**Usage:**

```
a_label = properTeXLabel( a_label )
```

**Description:** It will replace characters like space, '/', '.', etc.

**Parameters:**

**a\_label:** A label string.

**Returns:**

**a\_label:** The corrected proper a\_label.

**Example:**

```
>> a_label = properTeXLabel('this_day')
ans = 'this\_day'
```

**Author:** Cengiz Gunay jcgunay@emory.edu, 2006/01/17

---

**A.57.47 Function** functions/readgenbin

**Summary:** Reads a time-range of data from a binary GENESIS file.

**Usage:**

```
[data, time_trace] = readgenbin(filename, start_time, end_time, endian);
```

**Description:** Files should be created by the disk\_out method in the GENESIS neural simulator. No checking for binary type is made, so if you want reliability please ensure the file is a binary. Files written by GENESIS on big-endian machines (like old Mac and Solaris machines with PowerPC architecture) must be loaded with the endian='b' option. There are sanity checks to flag that the file may be reverse-endian, but this is not automatically corrected. Runs faster if you don't request the time\_trace output.

**Parameters:**

**filename:** Path to GENESIS file.

**start\_time, end\_time:** Time in milliseconds relative to the ACTUAL time of the experiment at which data acquisition started (if you start gathering data at 200 ms and you specify 0 start time it will not work). If either is [] or NaN, defaults to beginning and end of trace, respectively. end\_time is not inclusive.

**endian:** (optional) Indicates file format; 'l' for little endian and 'b' for big endian. See the "machineformat" option in `fopen` for more information. Defaults to the native endian of this computer.

**Returns:**

**data:** Data vector or matrix read. **time\_trace:** (Optional) Corresponding time range vector (in ms).

**Example:**

```
Fully read a native-endian file:
>> dat = readgenbin('mydir/myfile.bin');
Specify a time range:
>> dat = readgenbin('mydir/myfile.bin', 100, 1000);
Get a time vector back:
>> [dat, t] = readgenbin('mydir/myfile.bin', 100, 1000);
>> figure; plot(t, dat);
Force to fully load big-endian Mac file on PC platform:
>> dat = readgenbin('mydir/mymacfile.bin', NaN, NaN, 'b');
```

**See also:** `fopen` (p. ??)

**Author:** Alfonso Delgado-Reyes original version based in open

---

#### A.57.48 Function `functions/readNeuronVecAscii`

**Summary:** Reads Neuron simulator Vector object data from ascii files.

**Usage:**

```
[data, label] = readNeuronVecAscii(filename)
```

**Description:** It's one line of code just to read the data: `dlmread(filename, '\t', 2, 0)`

**Parameters:**

**filename:** Full path to Neuron file.

**Returns:**

**data:** Row vector with two columns of data. **label:** String denoting Vector contents.

**Example:**

```
data = readNeuronVecAscii('myvec.dat');
```

### A.57.49 Function `functions/readNeuronVecBin`

**Author:** Konstantin Miller `jmillier@cs.tu-berlin.de`, Aug 09, 2005.

---

### A.57.50 Function `functions/renameIdx`

**Summary:** Rename one or more items in a database dimension (rows, columns, etc).

**Usage:**

```
new_idx = renameIdx(old_idx, old_names, new_names)
```

**Description:** Prefer the convenience methods in `tests_db` (`renameColumns`, `renameRows`) and `tests_3D_db` (`renamePages`). This is a cheap operation than modifies meta-data kept in object. For the regular expression renaming, the `old_names` and `new_names` parameters are passed to the `regexprep` command after removing the delimiting slashes (`//`). At least one grouping construct (`()`) must be used in the search pattern such that it can be used in the replacement pattern (e.g., `'1'`). *See example above.*

**Parameters:** `old_idx`: An indexing structure (`a_db.col_idx` for columns, etc).

`old_names`: A cell array of existing names, array of numerical indices, or a regular expression denoted between slashes (e.g., `'/(.*)/'`).

`new_names`: New names to replace existing ones OR regular expression replace string (no slashes, e.g., `'1_test'`). *See `regexprep` command.*

`a_db`: The `tests_db` object that includes the new names.

```
>> a_db.col_idx = renameIdx(a_db.col_idx, 'PulseIni100msSpikeRateISI.D40pA', 'Firing_rate');
>> a_db.col_idx = renameIdx(a_db.col_idx, 1, 'Firing_rate');
>> a_db.col_idx = renameIdx(a_db.col_idx, '/(.*)/', '1_old');
>> a_db.col_idx = renameIdx(a_db.col_idx, 'a', 'b', 'c', 'd');
>> a_db.col_idx = renameIdx(a_db.col_idx, [1, 2], 'c', 'd');

tests_db/renameColumns (p. 301), tests_db/renameRows (p. 302), tests_3D_db/renamePages

**A.57.51 Function** `functions/setAxisNonNaN`

**Summary:** Returns the limits of the current axis replaced with the non-NaN elements of the given vector.

**Usage:**

```
new_axis = setAxisNonNaN(layout_axis)
```

**Parameters:**

`layout_axis`: The axis position to layout this plot.

**Returns:**

`new_axis`: Modified axis.

**Example:**

```
>> axis(setAxisNonNaN([0 100 NaN NaN]))
```

**See also:** [plot\\_abstract](#) (p. 180)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2007/10/29

---

**A.57.52 Function** `functions/sortedUniqueValues`

**Summary:** Find unique rows in an already sorted matrix (or column vector).

**Usage:**

```
[rows, idx] = sortedUniqueValues(data)
```

**Description:** Uses the derivation by Matlab `diff` function method. Redundant with the Matlab function `UNIQUE` doing the same job: `[rows, idx]= unique(data, 'rows', 'first')`. However, `sortedUniqueValues` is more efficient if the input data is already sorted for some other reason (see usage in `tests_db/invarValues`).

**Parameters:**

`data`: A ascending row-sorted matrix or column vector.

**Returns:**

`rows`: A matrix or column vector of unique rows. `idx`: Indices of the unique rows in the original data matrix.

**See also:** [uniqueValues](#) (p. ??), [unique](#) (p. ??)

**Author:** Cengiz Gunay [jcgunay@emory.edu](mailto:jcgunay@emory.edu), 2004/09/27

---

**A.57.53 Function** functions/string2File

**Summary:** Writes string verbatim into a file.

**Usage:**

```
string2File(string, filename, props)
```

**Parameters:**

**string:** To be written into file.

**filename:** The file to be created.

**props:** A structure with any optional properties.

**append:** If 1, append to existing file.

**Returns:**

**See also:** [cell2TeX](#) (p. ??)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2004/12/10

---

**A.57.54 Function** functions/struct2DB

**Summary:** Converts a structure array to a tests\_db object.

**Usage:**

```
a_tests_db = struct2DB(a_struct, props)
```

**Description:** Field names become column names in the DB.

**Parameters:**

**a\_struct:** A structure to convert.

**id:** Optional database id string.

**props:** A structure with any optional properties, passed to tests\_db.

**Returns:**

**a\_tests\_db:** A tests\_db object.

**See also:**

**Author:** Cengiz Gunay jcgunay@emory.edu, 2008/01/11

---

**A.57.55 Function** functions/struct2str

**Summary:** Converts numerical structure into a single-line string.

**Usage:**

```
a_str = struct2str(a_struct, props)
```

**Parameters:**

**a\_struct:** Structure that has names pointing to numerical values.

**props:** A structure with any optional properties.

**Returns:**

**a\_str:** A string that contains structure fields and value like in 'name1\_val1\_name2\_val2....'

**See also:** [cell2TeX](#) (p. ??)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2011/05/17

---

**A.57.56 Function** functions/subTextLabel

**Summary:** Draws a text label on a plot.

**Usage:**

```
handle = subTextLabel(x, y, text_str, props)
```

**Parameters:**

**x, y:** 2D coordinates.

**text\_str:** String to be drawn on plot.

**props:** A structure with any optional properties.

**Units:** position units for the coordinates (see Units in axes properties).

**Returns:**

**handle:** Text object handle.

**Author:** Cengiz Gunay jcgunay@emory.edu, 2005/04/11

---

### A.57.57 Function functions/TeXfloat

**Summary:** Places LaTeX content into a float (e.g., table, figure).

**Usage:**

```
tex_string = TeXfloat(contents, caption, props)
```

**Description:** Tabular contents can be created from cell arrays using `cell2TeX`. `displayRowsTeX` calls this function to make the float directly from database contents.

**Parameters:**

**contents:** Table contents in LaTeX.

**caption:** Table caption.

**props:** A structure with any optional properties.

**rotate:** Degrees to rotate.

**width:** Resize to this width.

**height:** Resize to this height

**center:** Align to center.

**shortCaption:** Short version of caption to appear at list of tables.

**floatType:** LaTeX float to use (default='table').

**label:** Used for internal LaTeX references.

**Returns:**

**tex\_string:** LaTeX string for float.

**Example:**

```
>> string2File(TeXfloat(cell2TeX('a', 1; 'b', 2), 'a basic table', ...  
struct('rotate', 90, 'label', 'simple-table')))
```

**See also:** [cell2TeX](#) (p. ??), [tests\\_db/displayRowsTeX](#) (p. 269)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2004/12/13

---

### A.57.58 Function functions/trace2cc

**Summary:** Converts a single-column trace vector into a `current_clamp` object.

**Usage:**

```
a_cc = trace2cc(a_tr, cip_times, cip_vals, props)
```

**Parameters:**

**a\_tr:** A trace object.

**cip\_times:** Start and end times of current injection [ms].

**cip\_vals:** A vector of current injection (CIP) parameter values [nA]. The number of the elements in this vector must be capable of dividing the length of the trace evenly.

**props:** A structure with any optional properties.

**Ihold:** [nA] Specifies holding current if different than first step value.

**dt:** Simulation time step of recorded data [s]. Use  $dt \times \text{nout}$  of XPP (Default=1e-3).

**paramsVary:** Structure with variable name associated with an array. If only one value is given **cip\_vals**, use the values for this variable for the multiple trials found in file. (others are passed to **current\_clamp**)

**Returns:**

**a\_cc:** A **current\_clamp** object.

**Example:**

The following creates a current clamp object from the **cur\_inj45pA.t** trace object, a current step of holding at -10 to 0 nA at times 50 and 500 ms. The props **'threshold'** and **'paramsStruct'** are passed to **current\_clamp**.

```
>> a_cc = trace2cc(cur_inj45pA.t, [50 500], 0, ...
    struct('threshold', 10, 'Ihold', -10, 'paramsStruct', ...
    struct('gL_nS', 7, 'gKs_nS', 50.1, 'Cm_pA', 5)));
```

**See also:** [plotXPPparamRanges](#) (p. ??), [current\\_clamp](#) (p. 83)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2011/03/04

---

### A.57.59 Function functions/uniqueValues

**Summary:** Find unique rows in a matrix (or column vector).

**Usage:**

```
[rows, idx] = uniqueValues(data)
```

**Description:** Version which makes use of sort and diff. Maintains order of the original input.

**Parameters:**

**data:** A matrix or column vector

**Returns:**

**rows:** A matrix or column vector of unique rows. **idx:** Indices of the unique rows in the original data matrix.

**See also:** [sortedUniqueValues](#) (p. ??)

**Author:** Cengiz Gunay jcgunay@emory.edu, 2004/09/24

---

**A.57.60 Function** functions/updateErrorBars

**Description:** Code covered by the BSD License.

**Parameters:**

**h:** (Optional) Handle to figure or axis where to find errorbars (default=gca).  
**w, xtype:** (Optional) Passed to errorbar\_tick.

---

**A.57.61 Function** functions/writeNeuronVecAscii

**Summary:** Writes ascii file to be read by Neuron simulator as Vector object.

**Usage:**

```
writeNeuronVecAscii(filename, datax, datay, dx, dy, unit_x, unit_y, label)
```

**Description:** It's one line of code just to write the data: `dlmwrite(filename, ... [(0:(num_samples - 1))*dx*1e3, datay*1e-3], '-append', ... 'delimiter', '\t')` Data converted to Neuron units of nA, mV, and ms.

**Parameters:**

**filename:** Full path to Neuron file.  
**datax:** (Optional) X-axis points. Give empty vector to skip.  
**datay:** Column or row vector of data.  
**dx:** X-axis resolution in [s] or [V].  
**dy:** y-axis resolution in [A] or [V].  
**unit\_x:** Units of x-axis; 'V' or 's'.  
**unit\_y:** Units of y-axis; 'A', 'V', or 's'.  
**label:** Text label to export to Neuron (spaces will be replaced with '\_')

**Returns:**

Nothing.

**Example:**

```
writeNeuronVecAscii('myvec.dat', [], datay, 1e-4, 1e-3, 's', 'V', 'my membrane voltage');
```
